Hardware - PLUMBING AND HEATING - World

V. 15
Jan - June
1920

JANUARY 1920

Mr. Stanley Worker Says:

"Here's wishing you a great big share of the prosperity that 1920 has in store for every dealer in Wrought Steel Hardware made by the Stanley Works."

"The Door of Opportunity swings open, easily, smoothly and noiselessly, when hung on three Stanley Ball Bearing Butts."

Keep your eye on the car-owner in your vicinity — more garages than ever before will be built this year. Have a copy of our little booklet, "8 Garages," handy to show him when he calls.

Ropeconomy

TALK NO. 4

"LONG FIBRE"

The term "Long Fibre" is worthless as a quality designation for Manila Hemp or Rope. All Manila Hemp is **long**, as compared with other fibres, but its quality is indicated by texture and color,—not by length; the highest grades are much shorter than some of the inferior grades.

Following are the breaking strengths of three qualities of rope, all made in the same manner from different grades of Manila hemp—all **Long Fibre!**

<u>3/4" dia.</u>	<u>3/8" dia.</u>
A 6,200 pounds	A 1,600 pounds
B 5,400 pounds	B 1,450 pounds
C 4,300 pounds	C 1,200 pounds

"A" was Whitlock ALL-Manila, guaranteed to exceed Government Specifications (Bureau of Standards) in quality of fibre, yardage and strength—and the strength of a piece of rope gives a very real indication of its durability.

 This line called KYANIZE"

The full force of all Kyanize Advertising in big space in the big magazines is focused directly on ONE EXCLUSIVE AGENT only in each locality.

Powerfully designed window displays, cut-outs and signs make it easy to tie-up your store to this campaign.

Attractively designed, sales-winning booklets, like "The Inviting Home," color cards and folders that you are proud to distribute to your customers.

Direct-from-the-factory personal letters to your prospects.

All these, perfectly dove-tailed plans, combine to bring you (if you are the Kyanize Exclusive Agent) the cream of the varnish and enamel business in your town.

Kyanize
 KY-AN-IZE

The Business-Building Varnishes and Enamels

This high grade, quality line places you in the position to command the profitable business of your town.

Bigger advertising plans than ever are under way. Winthrop Wise, the Kyanize salesman extraordinary, is back. All the old Kyanize Agents know what that means and the new ones soon will.

NOW'S THE TIME—WRITE FOR PARTICULARS

In towns where there is now no Kyanize Agency an opportunity awaits some live dealers. Perhaps you're the man. Write us today, a postal will do, for full particulars. Just say: "Send me details on the Kyanize Agency." Now's the time to grasp this opportunity.

Etched Head of the Coes

Sound in the Head

To attain success a wrench like a man must be sound in the head.

Scrutinize that etched head of the Coes. No weakness there; it's a veritable bulwark of strength.

By the Coes method this head is upset so that the grain of the steel curves around the corner in a way that keeps it permanently across the angle of strain.

In testing the Coes head we have found it like trying to break hard wood across the grain.

The metal structure of the Coes head like the structure of the entire wrench is sound and substantial.

Sell wrenches that are made right—from head to handle.

Coes "Knife-Handle" come in all sizes from 6 to 21 inches. Every inch a Coes.

Your Jobber Will Supply You

Get a Grip on Wrench Sales

Sell a good wrench—or better not make the sale. Good wrenches like Pexto, out-grip, out-last and in the end out-sell cheap ones. Stores with a real grip on wrench sales are found to recommend only the best.

Pexto Wrenches are good wrenches with a hundred years' experience built into them. They have the metal, the temper, the design and features to maintain their leadership for another century.

And Pexto Wrenches are known to the general public. National advertising in the Saturday Evening Post has planted the name Pexto indelibly in the minds of hundreds of thousands of people. They can be sold *more* than wrenches—they are ready for the complete line of Pexto Tools—and you can sell them.

**PEXTO
Solid Handle Wrench**

This solid handle Pexto Wrench is made of three strong, simplified parts with heavy wooden riveted handles. The head, bar and handle frame are forged in one piece from high quality steel, next is the sliding jaw, and third the screw.

**PEXTO
Solid Steel Wrench**

Like its solid handle partner this wrench is made of three simple parts—the head, bar and handle are all forged in one piece from high quality steel. This Pexto Wrench is built for heavy duty.

**PEXTO
Pipe Wrench**

This Pexto Wrench carries out the highest ideals of Pipe Wrench design. The hardened jaws of steel grip like a vise, yet they are easily tightened or released. When you get a pipe wrench be sure it's Pexto-made.

McKINNEY BUTTS

For every door in every room

In homes and other buildings equipped with McKinney Butts door troubles are unknown—no sagging doors to chafe and destroy the woodwork—no nerve-racking squeaks as doors are opened and closed.

Despite the careful selection of materials and expert workmanship McKinney Wrought Steel Butts are inspected many times before they receive our stamp of approval. You can always tell a McKinney Butt by its smooth, even surface, clean cut edges, accurately-fitted joints and beautiful finish—and the quality never varies.

Interesting Butt Booklet will be sent upon request.

ROUND CORD PULLEY CHAIN

PATENT APPLIED FOR

GUARANTEED to operate over any common cord pulley, and is stronger and more economical than sash cord.

Get rid of the troublesome and unreliable sash cord, and standardize on the modern product, the latest thing out—"ACCO" Round Cord Pulley Chain. Guaranteed to operate freely and smoothly over any common cord pulley. Will not kink

Infinitely stronger than sash cord and will not stretch or rot—practically ever-lasting. Costs no more than common grade sash cord.

In case of fire "ACCO" Round Cord Pulley Chain won't burn. It will keep the windows closed, prevent drafts and the spread of a conflagration. Looked upon with favor by fire insurance companies.

"ACCO" Round Cord Pulley Chain

is made of the best steel obtainable, and blanked and assembled on specially designed automatic machines. Its strength is uniform throughout.

The builder likes "ACCO" Round Cord Pulley Chain because there is no waste. It can be cut into exact lengths, and the quantity required checked. You can hang more sash with "ACCO" Round Cord Pulley Chain than you can with sash cord. There's no knotting—it's all used.

"ACCO" Round Cord Pulley Chain is easily handled, and won't deteriorate in stock. It is packed in strong cloth bags containing 100 feet of chain, with 20 weight fixtures—enough for five double hung sashes.

"ACCO" Round Cord Pulley Chain comes in two finishes—Coppered Steel and S. R. P. (Special Rust Proof). Order from your regular jobber. If his stock hasn't arrived, write us direct. We'll give you immediate delivery.

THE ONLY FAIR TEST

The only fair test of Hack Saw Blades is the test of continuous use under local conditions.

Testing on high speed steel blades that you will use to cut machine steel gives a misleading result. Testing one or only a dozen blades gives little indication of what a brand will average. Testing in hand frames of blades to be used in machines, will teach you nothing.

Goodell-Pratt Hack Saw Blades are not made with the idea of excelling in freak tests, but are made to stand the test of continuous use day in and day out under average shop conditions.

Try them for a reasonable length of time and we know you will find them satisfactory.

Let Us Put Garage Door Sets on Your "Fast Selling" List

THERE'S good business for some one in your town selling "Cannon Ball" Garage Door Sets. Here are garage door hangers that sell as easily as they run. Every car owner wants them. They carry a good profit and you can sell them on a plan that ties up but little money in stock. Write and let us tell you about it.

The door hanger in the track is the famous

"Cannon Ball"

—two steel ball wheels running in an enclosed tubular track. Each wheel running on ball bearings—frictionless and noiseless.

Fit any door opening. Folding sliding doors fold inside. Protected from wind and weather. Automatically held in place against the wall. Cannot sag. Gives the owner tight fitting, weather proof doors without making them stick and bind. Doors that womenfolk can operate as easily as any door in their home.

This is just one of the many styles of garage door sets that you can get the sale of with the STAR Line of equipment. STAR Equipment includes not only garage sets but everything needed to equip a barn complete.

Write and ask for our catalog.

Ask Your Mechanic!

IF you want straight talk on tools, ask your mechanic or your garage man what he thinks of Billings & Spencer.

Tools are the biggest thing in his working life.

They make all the difference between the good job he's proud of and the bungle he hates.

Ask him.

He will tell you it's a matter of just-right steel—hard enough to stand the most strenuous service without denting—yet not so hard as to be brittle.

And a matter of perfect fit to the nut engaged—a matter of jaw shape, for the right wrench makes a clean, tight job of every twist, even when you put your weight into it.

You who buy tools may safely take a workman's word for what is right.

After all, it is more than a wrench you buy. It is hours of service and years of satisfaction instead of months of trouble.

Your hardware dealer will nod approvingly when you look for that Triangle B. Several thousand men have worked fifty years to make it worth looking for.

**WHY THE
ROCKWEAVE
WICK**

**CANNOT
CREEP
OR STICK**

The entirely new application of the principle of burner construction — eliminating all ratchets and gears — and the introduction of a non-burnable wick that is carried stationary in the movable burner, one of the greatest shortcomings of the ordinary oil stove, is completely overcome in the

Prove it by investigating a Nesco Perfect Stove; look at the cutaway view shown above.

The toggle joint swings on its pivot and raises or lowers the burner bowl. This motion regulates the level of the oil in the bowl in its relation to the flame.

The Rockweave Wick is stationary in the burner bowl. It never moves from this position. When the burner is raised or lowered, it carries the wick with it. The wick is non-burnable and woven with long fibres, making it strong, durable and absorbent for conducting oil from feed to flame. There is not

a single gear to rust or stick or wear out. No teeth to catch in the wick and tear, or fail to catch when they should work. Only positive action, — sure raising and lowering with ease, and staying where put. That is characteristic of the burning with the Rockweave Wick.

The Nesco Perfect will please your customers as no other oil cook stove ever has. It is the last word in satisfaction, — a stove that will back up with performance your heartiest recommendation.

Investigate it: Write us today for descriptive circular.

BURNED"**

**WHEN YOUR
BACK
IS TURNED"**

Ideal Poultry and Rabbit Fence

Is a Fence and Not a Netting

The horizontal wires in the Ideal Fence make it possible to stretch it perfectly, and **FEWER POSTS ARE NEEDED** and **NO TOP OR BOTTOM RAIL**. Posts may be set a rod apart, and if the fence is well stretched it will be strong and effective.

Hexagon mesh poultry netting is good and has many uses, but it cannot be stretched without pulling together in the middle, hence top and bottom rails are necessary and the posts must be close together.

Like all fences the heavier the wire the longer it will last, so we recommend the heavier styles; but for many purposes, like protecting a young orchard or vineyard where a cheap fence is good enough, the No. 20 will do the work effectively and is less expensive when erected than any other fence or netting with the same size of mesh.

For permanent poultry yards the heavier styles are better and cheaper, life of fence considered.

In all weights and styles the horizontal wires are two inches apart. The size of mesh is governed by the spacing of the mesh wires. Every style has a cabled selvage both top and bottom.

To cut down the cost per cut

How Many S. P. M.?

"Haste makes waste" is just as true of hack saws as of anything else. Forcing a blade by increasing the strokes per minute means a quickly dulled blade. 50 to 60 strokes per minute is about as fast as it is economical to run when cutting dry. On soft steel, using compound, saws may be run to advantage at about 100 S. P. M., at from 65 to 80 on annealed steel, and on unannealed tool steel at about 60 to 80 strokes per minute.

Follow the Starrett Hack Saw Chart, put on the weight and watch the cutting cost decrease.

Keep the Confidence of Your Customers

HANDLE THE

MUELLER PIPELESS FURNACE

You know that a great number of your customers buy almost entirely on your recommendation.

Confidence makes it easy to sell goods. Therefore, choose the pipeless furnace that will keep your customers' confidence and hold their trade. You can depend upon the Mueller Pipeless to give your customers 100% satisfaction. Thousands of Mueller dealers will testify to that. Study the construction of the Mueller thoroughly and you will be convinced that its many excellent features result in positive fuel-saving and heating comfort.

A SCIENTIFICALLY BUILT FURNACE

The Mueller Pipeless is based on 63 years' experience in building heating systems of all kinds.

All parts are scientifically and correctly proportioned, shaped and arranged.

Its vast heating surface, straight, unre-

stricted air passages and large register face mean maximum heating efficiency.

These exclusive Mueller features furnish real selling points which you can use to show why the Mueller is the most successful pipeless furnace made.

POSITIVELY SAVES ONE-THIRD TO ONE-HALF ON FUEL

Thousands of Mueller Pipeless owners are saving one-third to one-half on fuel each winter.

Letters prove it—and many of these letters come from the coldest parts of the country.

The Mueller burns all fuels—hard or soft coal, coke, wood, lignite, gas or oil. Its ease of installation is another reason why dealers favor the Mueller. No bolts or screws are used. No need to tear up floors or walls for pipes.

The Hall-mark of Quality in Sheet Metal

Years of service have proven that Toncan Metal is far more lasting than the best ordinary sheet, made from iron ore.

However, Toncan Metal when new looks just like any other sheet metal. That is why every sheet is clearly stamped with this trademark. It's a protection for you as well as for your customer.

The use of this **quality** sheet metal means bigger business for you. First—because in years to come your work will be judged by the way it lasts and, Second—because the lasting service given by Toncan Metal will lead to a wider use of sheet metal.

It pays to recommend and use Toncan Metal for every severe sheet metal service.

UNIVERSAL ALUMINUM WARE

New goods for the New Year—a new avenue of revenue for “Universal” dealers. Universal Aluminum Ware is new in design, new in quality concepts, new in selling possibilities. Thousands of women have bought “Universal” Home Needs. They have locked the name “Universal” in an unshakable memory. They know that “Universal” stands for everything that quality can mean. They are ready to buy the strong, lustrous Universal Aluminum Ware to brighten their kitchen hours. They will buy it because they’ll get the most quality—and the best quality for their money that has been or can be produced. You cannot afford to neglect investigating this line so vital to the welfare of your business.

Domestic Electric Irons Turn Quickly at a Substantial Profit

THE Domestic Electric Iron is strictly a hardware dealer proposition. It is the best iron possible to make, and pays you a very liberal margin of profit. It never fails to please the user, and is backed by our guarantee.

The Domestic is thoroughly high grade in efficiency, durability and appearance. Its design is pleasing, its finish is distinctive and its service high quality.

The Domestic heats quickly and retains the heat, with minimum current consumption. Packed in individual boxes, complete with 6-foot detachable cord and stand. Six irons to the case—two cases make shipping weight.

Push this profitable seller in 1920. An immediate inquiry will get you a very liberal discount. Write at once for details.

Order now from your jobber, or direct from us, and put the goods on your counter. They'll go quickly, showing up a nice bit of coin in the year's business.

Evolution of a Successful Business

1877

UNPRETENTIOUS and humble was the beginning of the Voss Washers. Over forty years ago the first little hand power machine was built.

1882

The advent of new inventions made it necessary to improve the Voss Washers to keep abreast of the demands.

1895

Wonderful improvements and changes have been wrought in the past decade until Voss Washers are of a pronounced design having exclusive features found on no other machine.

How to buy a pair of pliers

2 — Cut a nail in two

Try this test with CEE TEE CO. Pliers; then with ordinary pliers:

Take an ordinary six-penny wire nail. Try to cut it in two.

See how clean the CEE TEE CO. Pliers cut—and how easily.

You can't "spring" a pair of CEE TEE CO. Pliers, because every part is milled to fit so perfectly. Try this test with ordinary pliers — chances are you will spring the cutters apart without cutting the nail.

Your jobber has CEE TEE CO. Pliers.

"HURWOOD" Screw Drivers

**Unsurpassed for
Strength and
Durability**

Blade, Shank and Head are one piece of special steel. Two patented projecting wings under the head together with a rivet which passes through the ferrule, handle and shank, securely fastens the Blade in the Handle, preventing its turning.

The Blades are finely tempered and well finished.

The Handles are polished and stained black.

Many styles and sizes from which to select your stock.

Manufactured by
STANLEY RULE & LEVEL CO.
NEW BRITAIN, CONN. U.S.A.

When Life Hangs by a Thread!

FAR out at sea! Battling against wind, fog and storm! Every second a moment of peril!

With face tense, the aviator listens to the whirr of the speeding aeroplane motor—listens for the sound that would tell him in a flash of some slight inaccuracy of adjustment—slight, yet perhaps sufficient to turn success into failure and possible disaster.

But the flying man's apprehension is tempered by the knowledge of the wonderful progress made by present-day mechanics.

For the mechanic of today performs the delicate operations of fitting together engine and machinery parts with Clover Grinding and Lapping Compound. He is enabled to produce work of unfailing accuracy because the patented solidified oil and abrasive formula of Clover successfully meets every condition of grinding, lapping, surfacing and polishing—and Clover is always uniform.

Clover-fitted engines and machinery are enabling man to conquer time, space and distance. Clover is the modern factor in mechanical progress.

Clover Compound is Standard throughout the World. Over 3,000,000 cases sold in 1918. Made in 7 grades from extremely fine to extremely coarse—a grade for every mechanical purpose. Used in garages, machine shops, tool rooms and factories. Used for general grinding, lapping, surfacing and polishing work on automobiles, airplanes, tractor, motor boat and ship engines, locomotives and stationary engines; gas, air and steam fittings, flaps, dies, gauges, etc., and on general machinery of every description. For sale at hardware and automotive equipment dealers and jobbers everywhere.

CLOVER

Grinding and Lapping Compounds

4-oz. Duplex Cans for Valve-Grinding

This is the famous handy package on which Clover won its reputation as the world's best valve grinding compound. Last year, half a million people bought 2,000,000 of these Duplex Cans. Motor engine valves ground with Clover seal better, produce greater power and last longer.

Sample on request

Pound Cans for the Shop

Made in 7 grades—a grade for every use. The toolmaker will appreciate Clover as the best lapping compound he has ever used. The garage mechanic will find that our Grade D works faster and gives better results than anything else. Clover will positively remain uniform throughout every lapping operation—it is the only compound which can be used successfully with a power-driven tool.

Sample on request

CAUTION: Avoid inferior grinding and lapping compounds. They cannot possibly give satisfaction. They waste your time and money.

The oldest manufacturers

Your customers know there is a logical reason for the better and cheaper blasting results of Giant Powders. They have been improved and developed longer than any other dynamite or powder made in this country.

In 1866 the first Giant laboratory was built in the present Golden Gate Park. Today, with our chain of great plants and magazine stocks throughout the entire West, we can serve you with Giant Powders.

There is a good profit in every sale of Giant Farm Powder. Its use leads to improvements, permits the use of intensive tillage methods and develops your farm machine market. More than 3000 merchants are selling Giant Powder in constantly increasing quantities. These merchants have found that sales of Giant Farm Powders bring repeat orders. Farmers who once use them always come back for more. Dealers who have been selling only the ordinary dynamites find that their sales increase rapidly as soon as they stock the Giant brands.

Write for information regarding the ways in which we help Giant dealers to sell more Powder.

SAVAGE PROGRESS

We have always endeavored to embody in our fire-arms the latest modern designs, and improvements. Following this policy, we take pleasure in announcing that all our automatic pistols will be furnished hereafter with an improved hammer with a spur cocking lever.

The experience of the war has proved conclusively the necessity of being able to readily cock and uncock a pistol with the thumb of the hand that holds it. The United States Navy, in seeking a new pistol to adopt as its service arm, specified as one of its most important requirements that it should have a hammer or similar device to permit cocking and uncocking the pistol with the thumb of the hand that holds it.

As the Savage has all the essential features of the best military pistols in miniature form, it has been decided to equip all pistols hereafter with an improved spur cocking lever.

The Fastest Tool Sharpeners Made

The Hammer Grinder

pedals like a bicycle—worm gear drive—all-metal construction—dust-proof ball bearings. Head swivels, making the most awkward tool easy to sharpen. Two Dymo-Grit wheels. Every farmer needs a "Hammer."

LUTHER GRINDER MFG. CO. MILWAUKEE, WIS., U. S. A.
The Largest Makers of Farm Repair Tools in the World

Twenty-five times as fast as a grindstone without drawing the temper from the tool—that's the big reason why Luther Tool Sharpeners are so popular with all who use cutting tools.

The wonderful Dymo-Grit wheels, found exclusively on

Luther
TOOL GRINDERS

are the fastest grinding wheels known. They cut the steel instead of wearing it, as grindstones and emery wheels do. No pressure required—no water or oil to cool the tool.

Best Maide Grinders

Ask for catalog describing these quick-selling hand-power grinders. Their worm gears, tilting frames and ball bearings make them the ideal tool sharpeners. Especially good for wood-working tools.

Write for catalog and information concerning the complete line of Luther farm repair tools.

Stock this Mayhew Bit Extension

Your customers need this Mayhew Bit Extension—the most nearly perfect on the market.

The forged steel jaws completely close on the shank of the bit. A flexible connection between jaws and shank of the extension insures centering the bit. Sleeve runs on a quick-acting multiple thread. Extension will follow a $\frac{5}{8}$ " hole. Made in all lengths from 12" to 36".

"Every blow of the hammer repairs the steel"

Regular Mayhew quality. Meets a definite demand. It should be in your store.

Handle Detached. Cut shows Right Hand Casement Adjuster

Superior Casement Adjuster

For windows that open out
Operates without disturbing the screen

Superior Casement Adjuster is the most convenient to operate because all that is required to unlock and move the window is to simply move the handle; when you let go the handle the window is locked automatically.

Superior Casement Adjuster is the strongest because it locks on the rod fastened to the window and thus combines the strength of the two rods.

Superior Casement Adjuster holds the window firmly at any angle and does not allow the window to rattle.

You Sell Them on Sight

because your customers will appreciate these good points in the

Kees Screen Hangers

No extra cost—screws furnished.
No fumbling—patented guide-flange prevents that.
No rust—Japanned pressed steel.
No makeshift—holds rigidly secure.
Not expensive—cost no more than others.

SUPERIOR IN EVERY DETAIL

to the ordinary kind and Mr. Buyer can see it with the use of our display set. Stock them today and watch the profits grow with each satisfied customer. Sold by most Hardware Jobbers, or write for Free Samples and Prices to Department 50.

F.D. Kees Mfg. Co. Beatrice, Nebr.

The Auto-Wheel Coaster Arouses Nation-Wide Interest

From Maine to California the Auto-Wheel Coaster is the favorite boy's wagon. Our contest brought inquiries from and made sales in every state in the Union.

The great demand for the

Auto-Wheel Coaster and Auto-Wheel Roadster increases—and each sale registers a net profit for the local dealer.

We clinch the sales for local dealers by sending every prospect to them to buy—and then urge every Auto-Wheel owner to organize an Auto-Wheel Club, so as to bring more customers to you. We furnish the boy club member with CAPS and send a FREE FELT PENNANT to every boy who answers our advertisements.

If you would like to have a share of this business, write for details of our follow-up plan today. We'll be glad to send it, for we know that you will appreciate the help in making sales.

"Forstner" Brace and Machine Bits

For Fine Carpenter, Cabinet and Pattern Work

peditions than chisel, gouge, scroll-saw, or lathe tool combined, for core-boxes, fine and delicate patterns, veneers, screen work, scalloping, fancy scroll twist columns, newels, ribbon moulding and mortising, etc.

Manufactured by **THE PROGRESSIVE MFG. CO., Dept. "A," Torrington, Conn.**

Enquire of Your Hardware Jobbers, or Write Us Direct.

Supplied in Sets

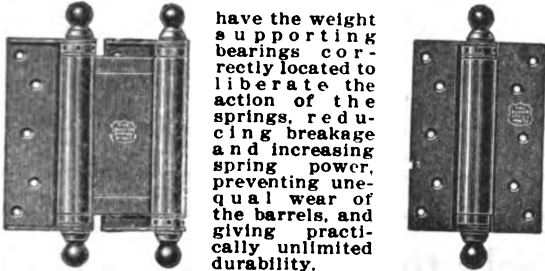

Write for Catalogue

Specially Adapted for Hardwood Working

The Forstner Labor Saving Auger Bit, unlike other bits, is guided by its Circular Rim instead of its center; consequently it will bore any arc of a circle and can be guided in any direction regardless of grain or knots, leaving a true polished surface. It is preferable and more expensive than other bits.

ONLY BOMMER

DOUBLE ACTING SPRING BUTT HINGES

have the weight supporting bearings correctly located to liberate the action of the springs, reducing breakage and increasing spring power, preventing unequal wear of the barrels, and giving practically unlimited durability.

Bommer Floor Surface Spring Hinge

Has Release and Holdback Features, Ball Bearing and Alignment Device

The most durable hinge of its type; holds the door open when swung to 90 degrees. The spring-action can be entirely released so door will swing free, without spring-action, by inserting a wire nail (when the door is open) into a hole provided in the side plates. The spring-action can be restored by withdrawing the nail.

The Quaker City may be slow on some things, but they're right there with the "goods" when it comes to making money with the

Hatfield Complete Sharpening Machine

About four years ago a progressive Hardware Store there bought a Hatfield Machine.

Now instead of putting this machine in a dark corner they put it right in their Show Window.

Behold the crowds! They came—they saw—they brought in their dull safety razor blades to be sharpened.

That machine and a little "dodger" which they put in each package that went out of that store was all the advertising they did. Those sharpened blades did the rest.

They told us they cleaned up \$2,250 in one year.

No wonder men kept taking dull blades there. Some machine that Hatfield. Send for details.

Best Selling Lamp in The World

Greatest advance in artificial lighting as applied to a sturdy portable lamp. Sold by 15,000 dealers. A big profit maker. No torch needed. Just use a match as with the old time oil lamp.

More Light Than 20 Oil Lamps

Gives a brilliant, steady, white light of 300 candle power, brighter than the brightest electric light, safer than the safest oil lamp—cheaper than candles.

The Coleman Quick-Lite

makes and burns its own gas from common gasoline. No wick to trim—no globes to wash. No dirt, grease, smoke or soot. No danger of fire or explosion. Fuel can't spill—no danger if tipped over. Quick-Lite lantern operates on same principle as the lamp.

Announcement to Cooking Utensil Dealers

Within the states of Colorado, Wyoming and Northern New Mexico we offer to hardware, house furnishing, general and department stores the complete line of

A L A D D I N

Cooking Utensils

Aladdin Cooking Utensils are of the highest quality. Every Aladdin Enameled Steel utensil carries the big red label and the quality mark is stamped on the bottom of each Aladdin Aluminum utensil. They are quick sellers—made popular with housewives by the extensive, full-color, national advertising in the leading magazines.

These six *convenience features* identify the superior quality of Aladdin Cooking Utensils:

- | | |
|-----------------------------------------------|----------------------------------------|
| 1. Actual capacities by Government Standards. | 4. Smooth comfortable handles. |
| 2. Double Lipped Sauce Pans. | 5. Round easy-to-clean corners. |
| 3. Notched ears that keep bails cool. | 6. More pleasing and practical shapes. |

The white, glossy finish of Aladdin Enameled Steel and the silvery, shining lustre of Aladdin Aluminum quickly attract the eye of the customer.

Write for full particulars of this attractive new proposition today. Get your order in now. Liberal dealer help material furnished every dealer.

Heat Your Entire House From One Register

SIMPLE — WARM — COMFORTABLE

Just this one large register. The hot air comes up through the center circle and the cold air goes down the other compartment between the circle and the border. It's right over the Quaker Pipeless Furnace.

More heat—and just where you want it—always ready. To warm that cold room, just open the door. The

Quaker Pipeless Furnace

has no pipes, no bulky cold air returns. Your walls are not torn up, no cellar is too small.

Will burn any fuel. Particularly adapted to soft coal. Special humidifier keeps the air always moist.

The furnace is built of heavy boiler plate steel, no cemented joints to leak gas, dust or soot. Fire pot lined with high-test fire brick, capable of withstanding 3400 degrees of heat. An abundance of clean, pure warm air sent to every room. Simpler than a stove to operate, cleaner, more saving of fuel, and much more healthful.

Sends heat to every room in the house. Ventilates as well as heats. Changes and purifies the air to every room. Keeps the cellar cool for fruit and vegetable storage.

Arrows show direction
of air currents

A furnace of unusual merit, making it the most desirable agency obtainable in a line of business which is startling for its rapidity of growth.

ALUMINUM

"Real Solid"

ANNOUNCEMENT

The **"REAL SOLID"** LINE has been for 20 years, the Strong, well known, dependable Aluminum line of Kitchen Utensils.

Our Policy is and has been to give the dealer goods of such quality that assures him not only his PROFIT, but the housewife's continued patronage. We have now added

A New Line of

"REAL SOLID WARE"

This is a Heavy Drawn line STAMPED from heavy tempered Sheets, which is far superior, in many ways, especially in Rigidity and Durability.

We have eliminated unnecessary expense of CAST ALUMINUM HANDLES, etc., and are Putting MORE METAL into the BODY of our UTENSILS.

TRIMMINGS—Tinned Iron, using Double Coated Tinned Iron—The best on the market.

PROTECTED HANDLES—All Coffee and Tea Pots with handles, both curved and straight—bottom of handle is protected with Metal Trimmings, so that it will be impossible for flames to creep up over bottom and burn off handle.

OUTSIDE FINISH—The Same HIGH CLASS polish as heretofore.

INSIDE FINISH—Scratch Finish Superior because it does not show finger prints from handling or dirt, which may accumulate while on dealers' Shelves.

We have added 25 New Items, all practical. This makes the **"REAL SOLID"** Line the most complete on the market

Write Today and get our New Catalog just off the Press.

SAFETY INTERLOCKING STOVE AND FURNACE PIPES

**Fire
Preventing**

**Home
Protecting**

Ambrose P. McGuirk's Patent

Our Asbestos-Covered Interlocking Furnace Pipes, Interlocking Stove Pipes, Interlocking Asbestos-Covered Flue Thimble, Interlined Interlocking Ring Flue Caps and Interlocking Elbows are not luxuries nor needless accessories. They are very necessary where stoves and furnaces are used. By fastening and cementing the Flue Thimble in the Flue Hole, and putting in and turning the pipe joint and locking it firmly therein, it can't pull out or be pushed in too far. Each successive pipe link is locked to the receding one, until the whole pipe is firmly locked together, and to the Stove Collar, so that the pipe can't fall down. When the pipe is taken down put in the Flue Cap and lock it, making the flue hole fire safe. Every home and factory owner is morally liable for impending fires on his property, and as fast as flames reap losses will our dealers reap profits on our Fire Safe, Rust Proof, Interlocking Pipes, Flue Thimbles, Caps and Elbows.

Send for Price List and Descriptive Statement.

Simplex Ironers Sell Easily

Women everywhere are sold on the value of household labor-saving devices. They have been educated as to the practical worth of modern equipment of all kinds.

So it is logical that they should buy a Simplex Ironer after having installed a good power washer. And that's the way it works out. Your women patrons will be quick to see the saving in time, labor and money effected by the Simplex Ironer.

SIMPLEX IRONER

"THE BEST IRONER"

Our National Advertising Campaign in the foremost publications has established the dominant position of the Simplex Ironer. The Simplex plan of cooperating with dealers for building business is most complete and far-reaching. It will pay you to investigate.

Write today for full information

DUPLEX

FIRELESS STOVE

The new Duplex folders give many reasons why these stoves represent the greatest value.

Right now, Duplex dealers are making increased sales because of the fuel and money saved by Duplex Fireless Stoves.

But remember these are the only stoves with individual covers for each compartment. They are made of non-warping steel, with big aluminum-lined cooking wells, giving the greatest cooking capacity. They are the only stoves with such features as the Duplex Steam Vent, aluminum-banded heating discs, adjustable catches and metal legs.

Duplex advertising to millions of women is creating a greater demand for these stoves.

You can cash in on this demand by mailing the Duplex folder with your name and address printed on the front cover, or by the use of many other live Duplex sales helps.

If you are a Duplex dealer it will pay you to make use of these features—if you are not, it will pay you to write today for information regarding the Duplex proposition.

Are You Getting Your Share?

Hardware World Dealers all over the country are "cashing in" on the new "Harvard" Ball Bearing Truck Caster. Are you one of them or have you overlooked this opportunity to increase your sales?

The new "Harvard" Ball Bearing Truck Caster is constructed of extra heavy gauge steel. The axle is also made of extra heavy steel. The wheel is cast iron. This caster is much lighter than ordinary iron casters yet is practically indestructible. It is unequalled for strength and dur-

ability. The large 5-16 inch ball bearings make them easy running and turning.

Our new "Harvard" Ball Bearing Thread Guard Caster shown below has proved a big seller to shoe factories and mills where lint and threads from the floor are apt to twist around the wheels and prevent free action. Their big feature is the steel guard which prevents this and their 7-32 inch ball bearings.

Every Hardware World dealer should have our descriptive circular No. 105 H. W., showing our complete line. Write for one.

BALDWIN DRY AIR REFRIGERATORS

**BALDWIN REMOVABLE CLEANSABLE
AIR FLUES.**
Patented.

This cut shows our fine patent removable air flues, giving access to all parts of the refrigerator for cleaning. They are made of stout galvanized sheet steel, securely locked to sides of refrigerator, and so shaped as to render them strong and proof against the rough usage of the average ice man; a radical improvement over the usual flat, loose piece of metal sliding in a groove used by competitors and ruined by the ice man in a few days. Ours is the strongest, most convenient and effective system of movable air flues in the market.

New Ladd's Discount Book No. 3

A new and enlarged edition of this standard work, comprising the most comprehensive collection of discounts ever printed, as well as many other valuable computations for commercial purposes, is now ready, after months of preparation by the compiler and editor, William J. Ladd.

Is one of the greatest time and labor-saving productions of the age. The net of any amount at any discount can be obtained in a second. The calculations have all been carefully checked. No proving is necessary. It is invaluable for pricing and checking invoices, figuring inventory, making prices, figuring profit, etc. Note the equivalent discounts. Are they worth anything to you?

It contains more than 300,000 Computations including New Discounts and Combinations which have come into use within the last few years. Nearly 600 pages, all double indexed.

60, 10, 10, 7½ & 2½.

An up-to-date National Cash Register gives a merchant control of his business

IT forces each clerk, or the merchant himself, to make a record of every sale he handles. The record must be complete before change can be made or the transaction finished.

The record of each transaction is brought to the attention of the customer in two ways. By the electrically lighted figures at the top of the register and by the printed receipt which she receives.

The record is also printed and added automatically at the time the transaction takes place. These accurate records are the foundation of good storekeeping.

A merchant must have such records to control his business and to make up his income tax report. An up-to-date National Cash Register gives them to him cheaply, accurately, and quickly.

The Woman in the Hardware Store

No doubt you appreciate the value of feminine patronage. But many women still believe that a hardware store is an institution that takes care only of men's needs.

If your Silverware Department is up to date and attractive, it should serve to interest these doubters and introduce them to your store as a whole.

1847 ROGERS BROS.

SILVERWARE

is not only the best known silver plate, but it appeals to the woman who desires her silverware to harmonize with the furniture and other furnishings of her home.

A Plain and Simple Story

A SHORT while ago you had the looselides—of different shapes and styles—and varied quality—you dumped them on your counter and left them to chance to close the

deal. Your sales ran along a low general average—so low that it was hardly worth while to carry that line.

A Set of Four in Each Package

Now we are giving you a different proposition entirely. We are giving you uniform slides of superior quality—Domes of Silence—

We have put up Domes of Silence in handsome colored display boxes to make them an attraction on your counter. Your sales turnover ought to equal that of the stores indicated above on our facsimile order sheet. The package will do that for you.

We suggest for a start: special assortment A1, consisting of $\frac{1}{2}$ gross sets each of best selling sizes— $\frac{7}{8}$ in., $\frac{3}{4}$ in., $\frac{5}{8}$ in. and $\frac{1}{2}$ in.

The leading jobbers have Domes of Silence. Order today. If your jobber has not got them—write us giving his name and address.

Number 1

DISCONTENT BASED ON FALSE IDEAS

A student of labor conditions, himself a workman, recently declared that most of the industrial discontent in the United States today is based not on actual wrong suffered by labor, but on false ideas put into workmen's heads by radical agitators. It is largely the result, he reported, of a deliberate propaganda of distorted facts undertaken by the American I. W. W. and Bolsheviks and scheming politicians, posing as idealists.

The most mischievous notion spread among American workers, he said, is the notion preached everywhere by these radicals, that "capital" gets 85 to 90 per cent of the "earnings of industry," and "labor" only the remaining 10 or 15 per cent.

This, as the workman-investigator confessed, is almost exactly a reversal of the fact.

A good example is found in a recent statement made by a rubber company, which is not only one of the biggest business concerns in the country, but one of the most prosperous. Its sales for the current year are estimated at \$165,000,000. Of that sum its net earnings are estimated at \$20,000,000.

The other \$145,000,000 go, of course, mostly to the corporation's 43,000 employees. Of the remaining part paid for materials, etc., a correspondingly large part, of course, must be allowed for the labor engaged in producing and handling those materials before they come into the rubber company's hands.

Thus this very prosperous corporation is found to be getting a trifle over 12 per cent on its output. An economic expert estimates that, taking all business throughout the United States, the percentage is smaller than that—perhaps 10 per cent is going to capital and 90 per cent to labor, using "labor" in a broad sense.

Even this percentage may seem unjust in some cases, when there is a small investment and a big volume of production; but it is evident that the general ideas current among workmen on this subject need correcting.

TWELVE THINGS YOU SHOULD KNOW

1. Every sale made at cost reduces the profit on one profitable sale 50 per cent.

2. Every sale made at less than cost consumes the entire profit of at least two profitable sales.

3. A business that does not show a net gain of 10 per cent on the total volume of business is not making good.

4. If you are not figuring at least 10 per cent depreciation and 6 per cent interest on your total investment, you are fooling yourself into thinking that you are making money.

5. Depreciation and interest are the two items that keep the average man from going to the wall until his equipment is worn out.

6. If you are not paying yourself a good salary each week as manager of your plant, you are doing yourself and family an injustice and wrongfully reducing the cost of production.

7. What you think you know will not increase your bank account.

8. If you don't know why you know, you should get busy and find out.

9. The man who continues to ignore the benefits of co-operation and organization is continually buying oil to grease his way to ruin.

10. Ninety per cent of the men starting in business today without the experience and knowledge of cost and efficiency are failures.

11. Co-operation means more responsibility—more work—but also more results.

12. Yesterday is past. Plug for today and tomorrow.

When a group of retail men decide upon a wise, honest policy to pursue, there is sure to be some man or dealer who will stand out on the side and raise a controversy or a disturbance. Even so, the only thing to do is to go right ahead with the agreed-upon plan, and the man who holds out will either come into line, or will be satisfied at least that he is having his own way.

BURIAL OF JOHN BARLEYCORN

(By A. H. Halloran)

Friends, Rumhounds, Hardware Men, lend me
your ears!

I come to bury John Barleycorn, not to praise
him,

For that task belongs to those who knew him
better e'en than I.

The evil that men do lives after them,
Like the headache that comes the morning
after—

The good is oft distilled when they are cre-
mated.

So let it be with John Barleycorn. The Prohi-
bitionist

Hath told you that John gave men cheer;
If it were so, were it such a grievous fault?
You all did love him once, not without cause,
What cause withholds you then to mourn him?
But yesterday the power of John Barleycorn
might

Have stood against the world. Now lies he in
his bier

And none so rich might buy himself a stein.
If you have toasts, prepare to drink them now,
For now no more can you slake that thirst.
You all know this bottle. I remember the first
time ever I drank from it,

It was on a summer's evening in this hotel
That night I overcame the nerviest.
Look, in this place Carrie Nation's hatchet
struck.

See what a rent the envious Gandier made.
Through here the well-beloved Bryan stabbed.
Oh, this is the most unkindest cut of all!

Good friends, sweet friends, let me not stir you
up

To any sudden flood of mutiny.
They that have done this deed are honorable.
What private booze they have, alas, I know not.
What made them do it? They are wise and
honorable

And will no doubt with reason answer you.
I have neither wit, nor words, nor worth,
Action or utterance or the power of speech. But
were I soused,

Or even pickled, there were an orator
Would ruffle up your spirits, and put a tongue
In every empty glass that should move
Every one of you to rise and mutiny.

If you find a public need which is not filled
and you can plan to meet that need, you will
have plenty of business.

At the present time restlessness on the part
of help is met on every hand. Sometimes a
frank talk as to invoice costs and the expense
of selling costs will prove to your employes that
you are not a heartless profiteer.

TO CALCULATE PROFITS

Here is a schedule of profit calculations
which may be found useful by the average
business man. It shows, for instance, that 5
per cent added to the cost of an article is equal
to $4\frac{3}{4}$ per cent profit on the selling price. The
remainder of the table follows:

Addition to Cost	Profit on Selling Price
$8\frac{1}{2}$ per cent	7 per cent
10 per cent	9 per cent
$12\frac{1}{2}$ per cent	$11\frac{1}{4}$ per cent
15 per cent	13 per cent
16 per cent	$14\frac{1}{4}$ per cent
$17\frac{1}{2}$ per cent	15 per cent
20 per cent	$16\frac{2}{3}$ per cent
25 per cent	20 per cent
30 per cent	23 per cent
$33\frac{1}{3}$ per cent	25 per cent
35 per cent	26 per cent
$37\frac{1}{2}$ per cent	$27\frac{1}{4}$ per cent
40 per cent	$28\frac{1}{2}$ per cent
45 per cent	31 per cent
50 per cent	$33\frac{1}{3}$ per cent
55 per cent	$35\frac{1}{2}$ per cent
60 per cent	$37\frac{1}{2}$ per cent
65 per cent	$39\frac{1}{2}$ per cent
$66\frac{2}{3}$ per cent	40 per cent
70 per cent	41 per cent
75 per cent	$42\frac{2}{3}$ per cent
80 per cent	$44\frac{1}{4}$ per cent
85 per cent	46 per cent
90 per cent	$47\frac{1}{2}$ per cent
100 per cent	50 per cent

BE A MANY-TIME MAN

I was dining with a friend at his club. "Do
you see that chap yonder?" he asked me.
"Well, I knew him twenty years ago. He is the
man who produced one of the greatest musical
comedy hits of his day. But he hasn't done a
thing worth mentioning since, though he is bub-
bling with ability."

The world is filled with such "one-time"
men—those who let a single success kill them.

I have in mind an actor who scored a tre-
mendous success in a play that everybody was
talking about many years ago. But he never
rose again, after that popularity had waned.
He, also, was a "one-time" man in a "one-
time" job.

It never pays to become satisfied. Glory is
to the alert!

Keep studying, keep thinking, keep trying.
Never allow a single sun to set upon an effort
that isn't the best that you can do. Take the
job up again in the morning. Steer clear of
ever becoming a "one-time" man or woman.

Hit while the iron is hot—but keep the iron
hot all the time!

And never allow a single effort to settle
you in a "flowery bed of ease." The most
thrilling thing in the world is achievement. Yet
not one, but many, one after the other. And
the greatest achievement of all is to pass and
to surpass, yourself!

Be a many-time figure in the world.

—George Matthew Adams.

ARE MERCHANTS THEMSELVES THE WORST "ALIEN BUYERS"?

There is no reason why the local retail merchant should not secure the bulk of the business of his home town. But it can be done only by fostering a feeling of loyalty for the home town.

Let every merchant in the town spruce up a bit, paint the store front, put in a few dollars' worth of new, and badly needed, fixtures and bring out his new goods, and then all together "whooper-up," and the old town will wake up with such a jolt that the people will forget, for the time at least, that there is a mail-order house in the country.

It is wonderful what a little cooperation will do. Let the merchants forget their petty jealousies for a few weeks and hob-nob together for mutual profit's sake.

A prosperous merchant of Birmingham some time ago had a card printed which read:

"Don't knock Birmingham if you stay here. If you feel like knocking the city, don't stay. There are 18 trains north and east each day. There are 16 trains south and west each day. Mileage is cheapest—it's up to you."

That merchant had the proper spirit at any rate.

If all merchants had this same spirit there would be many more good little places to trade, many more good little places on the map where a merchant could settle down contentedly and make money. If the people of some of these places are disloyal to the home town in buying, they frequently have the merchants to thank for starting the thing. It usually starts by one merchant buying some little thing away from home, which causes a feeling in some other that he may do the same thing, and so the links in the chain of outside buying are forged, one by one.

Some merchants are so selfish they do not care if the whole town buys the other's fellow's goods out of town so long as they can feel that their own goods will be purchased at home. But they do not know human nature. They do not know the power of habit. They do not know how strongly imitative the human animal is. They do not know anything about the psychology of business, or they would not start a movement that will eventually reach themselves with its harmful consequences.

Let the merchant curb his desires and make them conform with the goods that he can secure from his brother merchant. Let all retail merchants beware of the dollars they send away. There is no profit in them, even if there is an apparent saving. Every dollar that goes out of town stays out. None of it ever comes back again. It is like the drafts our un-American aliens send to Europe. Every dollar that is spent in the home town circulates and leaves a

profit in every hand that holds it for the time being.

Stir up things in the home town. Have a "Home Products Week" or a "Bargain Week," or a "Street Fair," or something better. Start something and wake up the burg. Let the people know that there are a few live and loyal merchants outside of the large cities. There's profit in it.

A NEW YEAR'S PRAYER

Teach me that sixty minutes make an hour, sixteen ounces one pound, and one hundred cents one dollar. Help me to live so that I can lie down at night with a clear conscience, without a gun under my pillow, and unhaunted by the faces of those to whom I have brought pain. Grant, I beseech Thee, that I may earn my meal ticket on the square, and in doing thereof that I may not stick the gaff where it does not belong. Deafen me to the jingle of tainted money and the rustle of unholy skirts. Blind me to the faults of the other fellow, but reveal to me mine own. Guide me so that each night when I look across the dinner table at my wife, who has been a blessing to me, I will have nothing to conceal. Keep me young enough to laugh with my children and to lose myself in their play. And when comes the smell of flowers, and the tread of soft steps, and the crushing of the hearse's wheels in the gravel out in front of my place, make the ceremony short and the epitaph simple: "Here Lies a Man."

—Homer McKee.

A SMILE

If I were owner of a store
I'll tell you what I'd do;
I'd never let folks hear me grouch,
Nor think that I was blue.
I'd scatter good cheer all around,
And though it may sound strange,
Whenever folks bought goods of me
I'd give a smile in change!

I'd make folks like to deal with me;
I'd make them all my friends,
And then I know my store would grow
And pay big dividends!
It's such a little thing to do,
Yet I know it's worth while
Whenever someone buys my goods,
To throw in, free, a smile!

Forget the sadness and the scowl,
There's nothing worth a frown;
Remember, when things seems upset
It's you that's upside down!
So in my store I'd have good cheer
Right from the very start!
And all my gladness I would have
Backed by an honest heart!

HALF-WAY DOING FALLS SHORT OF SUCCESS.

"Nothing is good, which could be done better;
Nothing is clean, which could be cleaner."

In a certain well-known institution for defectives this motto is given to all incoming workers, "Nothing is good, which could be done better; nothing is clean, which could be cleaner."

This particular institution is rated as one of the very finest and best cared-for of its kind in the entire state where it is located, and there is reason to believe that this yard-stick of measurement which is constantly kept before the minds and eyes of the workers, is in no small measure responsible for this condition.

Remember, this isn't an easy sort of a place to work in, either—where the age limits are from childhood to old age, and the mentality of the inmates is of a lower order. Yet, the requirements are never lessened—"Nothing is good, which can be done better; nothing is clean, which can be cleaner."

Slowly, but surely, the idea is impressed upon every member of that organization that "the best" is not a relative term, but a description of a condition or method which cannot be improved upon.

If all business organizations could adopt this motto for its own use, or if it does not fit exactly, could adapt it so that it would apply, it would be worth a lot of money, wherever used.

It might be well to have cards printed with such a slogan upon it, to hand to new employees. It would make them think. If they didn't think, they would be hopeless.

Avoid These Errors

When the new clerk leaves the show-case doors half open, letting dust and flies in; when he half-closes a drawer, leaving it for someone to run against; when he makes an incomplete record of a transaction; when he half serves a patron; when he lacks in courtesy; when he fails in skillful salesmanship; when he tidies his section of goods indifferently; or puts away a new invoice in a sloppy manner—a silent reprimand could be given easily, by handing out one of those cards without a word of comment.

One of the reasons that so few people reach real success in any line is because they permit "The good to be enemy to the best." That is, they are satisfied with something by means of which they can just get by. They are the type of individual who count it gain to get out of doing things, rather than to reach up to do the very best of which they are capable.

"Nothing is good, which could be done better; nothing is clean, which could be cleaner."

The great number of people who are satisfied with mediocrity, prove that these individuals are contented to follow the line of least

resistance. As a rule, they have brains enough and physical strength enough, but they are lacking in the disposition to make the best use of both.

If our young people of school age could be imbued from childhood up with the idea that thoroughness to the point of finished excellence is absolutely necessary for self respect and finished task, we would in the next generation, have a class of skilled workers who would take such pride in their labors, that America would forge ahead in a thousand ways as it has never done before.

Sometimes it would seem that the subdivision of labor is tending to reduce pride in finished effort. A man cannot take pleasure in a complete chair if his work is only to make the rungs. Nor can he point with pride to an article of furniture of his own design, if he has only woven the cane in the bottom. And again, the worker who makes pockets, and pockets only; or collars, and collars only; or buttonholes, and buttonholes only, will not feel the joy in the completed suit which the individual does who starts and finishes an entire undertaking.

Fortunately, retail business of today affords ample opportunities for complete self-expression. It encourages initiative, improvement and individual thought—that is, provided everything is done as well as it can be done, and that no effort is left to chance, or expectation that if any part of the work is slighted, someone else will come along and round it up.

This is the reason that business life of today is producing so many individuals of outstanding superiority. It is also because the individual worker soon discovers that to do all of the parts of his work well that he must study, observe, learn from those who have both succeeded and failed. Be satisfied with nothing which can be done better.

It isn't a question of how much is given in the way of monetary rewards, nearly so much as the disposition of the individual. And the person who has the right disposition toward polishing his work to the point of shining excellence, will have no need to concern himself with thought of the future, for large opportunities are bound to claim him for their own.

Success in business depends on the ability to think, reason, and act rightly. Many fail because they act without thinking or reasoning, or are unwilling to profit by the experience of others.

Life and business would be a cinch if there were no decisions to make and no skill required in making them. Our minds are given us to use and our judgment to guide us. Anyway, the other fellow seldom knows all the facts of our affairs as we do. It is up to us.

CAPITALIZE YOUR "SPARE TIME"

As a general rule we may judge the character and quality and usefulness of a man by the way in which he spends his "spare time." It is understood, of course, that "spare time" is all of the time not spent in the regular vocation or task or labor of earning his daily bread.

The wise King Alfred is said to have divided his day into three equal parts—eight hours for work, eight hours for play or recreation and eight hours for sleep. Many thousands of American king-alfreds might do the same thing today, if they would, for there is no one to say that they must do this or that with sixteen hours out of every twenty-four — not to mention about twenty on Saturday and every hour of Sunday.

As recreation is a very broad term, it may not be too much to give a third of every day to it. Recreation means anything that will re-create, that is, rebuild, revivify, rejuvenate body and mind to fit them for the tasks of a coming day. The best of recreation, we believe, comes in a change of occupation. A blacksmith may find healthful recreation in a judicious game of baseball, but he must be careful not to overdue his activity, for muscles are not recreated while they are active. Likewise, a professor of mathematics may find recreation in a game of chess. The chief thing is that no matter what the recreation chosen it should conform to the Izaak Walton formula and "not give offense either to God or man."

Your spare time is your own, to do with as you see fit. How are you using it? If an hour or two additional in this line has come to you of late, what are you doing with this extra spare time? Are you making yourself and those around you better because of your greater leisure, your greater time for thought, your greater time for useful social effort?

Or are you simply adding this extra spare time to the hours of spare time you may have been wasting for years? If you are spending your spare time and your extra spare time wisely, thoughtfully, judiciously, usefully, then you and society at large are gainers. But if you are wasting not only the spare time you had but the extra spare time that has come to you, then you are infinitely the poorer and society in general is poorer through your increased capacity for greater idleness, greater wastefulness, greater mischief-making.

Every man owes it to himself, to his family, to his fellows, so to use his spare time that he may come with the greatest amount of efficiency and enthusiasm to the tasks of another day. Every man knows whether he is wasting his spare time or using it wisely. Analyze your spare hours and decide for yourself whether you are gainer or loser by them.

Every man's ideal should be twenty-four-hour-a-day efficiency. And as every man ought to be working for himself and with others, it is to his interest to find out how near he is approaching to this ideal of efficient work, efficient recreation, and efficient sleep.

AN EXAMPLE OF GOVERNMENT BUSINESS

Classification is a wonderful thing, but never so wonderful, so Aladdin-like, as when it is handled by some employe or agency of the national government. On one of our railroads a water tank was looked after by a near-by farmer. He turned an electric switch in the morning, and went about his bucolic business, then came back around six in the evening and turned off the switch. That was all he did for the railroad company, and for this service he received \$20 a month. Then Uncle Sam took over the railroads and at once began to "classify" the employes. Was the tender of the water tank a farmer or an electrician? Manifestly a farmer could have nothing to do with the operation of a railroad, so he was classed as an electrician.

But the wages of an electrician, according to classification, would be \$300 a month. So, without requiring any further work from him, the farmer was classified as an electrician, at the proper scale of pay, and besides was given "back pay" amounting to some \$3,000. Need it be added that one farmer at least in the United States is now a firm believer in government ownership and operation of our railroads? Surely the power that could make an electrician out of a farmer by the stroke of a pen would find it mere child's play to run our railroads—especially as you and I and the rest of us would foot the bills.

WORK LIKE H—.

There is a salesman who had a simple method for reviving his ambition or shaking the "blues." First thing in the morning he soaked his head in cold water. It started the blood coursing through his veins. Then he would repeat a little creed to himself:

"Why should he feel poor? Because—

"1. I have a good job.

"2. I am selling the best goods made.

"3. I represent the best house in the world.

"4. I am helping people to live better lives by selling them these goods.

"5. I have the finest wife God ever made.

"6. I have two of the sweetest baby boys that ever were given a man.

"What am I going to do today? Work like hell for all of them."

Look out for the new express rulings. It may save delay and disappointment.

Women Without Reason—Clerks Without Tact

Women and the Ordinary Clerk—The Irresistible Clerk—Women Respond to Courtesy, but Flattery Antagonizes Them

(Copyrighted. All rights reserved.)

SAID a woman shopper sweetly to an exhausted and perspiring clerk, who for a lengthy time had been vainly pulling goods down for her inspection:

"You needn't trouble yourself further—I was merely looking for a friend."

"My dear Madam," sarcastically replied the thoroughly enraged and exasperated clerk, "if that is the case, there is just one remaining kettle that you haven't looked at. Very possibly you may find your friend there."

Can you imagine the lurid mental atmosphere of that poor man? If such are daily occurrences in the lives of clerks in their dealings with the fair (!) sex, I am very much afraid that their chances of entering the kingdom of heaven are like those of the rich man, extremely negligible.

There can be no doubt that the clerk's opinion thoroughly coincides with Kipling's estimate of women—that "the female of the species is more deadly than the male!" But let us hope that such cases are exceptional.

Clerks Deserving of Sympathy

The clerk is deserving of profoundest sympathy, not alone for what he endures from experiences of this kind, but also for his affliction in receiving avalanches of advice hurled at his poor, defenseless head. It is a wonder clerks do not rise in their wrath and set forth:

"Rules and Regulations" for Customers to Observe in Their Dealings With Clerks.

With these rules enforced, the life of the clerk would be one glad, sweet song.

There is, unfortunately, a large class of women shoppers who are exceedingly difficult to manage, but in many cases of failure to

produce sales the fault lies with the clerk.

Women Respond to Courtesy

Lack of courtesy, unwillingness to show different lines, a bored and haughty manner, or a domineering, know-it-all style (being sure of one's self is permissible, but an over-assured manner is intolerable), and the equally of-

fensive, forward and familiar style—unfortunately these are the familiar behind-the-counter types that do not commend themselves to women shoppers.

Most clerks think that flattery is essential bait in landing the elusive shopper. Of course there are some women who eagerly grasp and assimilate all "soft soap" that may come their way.

But with the more discriminating woman, flattery has a decided antagonistic effect, and must be applied in delicate and deft touches.

Complimenting a woman on her excellent taste, good judgment and sense of values is sure to have a most soothing effect (sometimes you can almost hear them purr). Furthermore, the advice of a man of discerning qualities is almost certain to be listened to and acted upon, and

there will be less danger of being talked at.

But please don't forget, Mr. Salesman, that you can get just as good results from your male customers by this method.

Discrimination Necessary

Of course you must use judgment. The same methods cannot be applied to a square-jawed, triple-chinned, aggressive and determined dowager as to the appealing, baby-stare, fluffy type. Discrimination in all things! Truly the clerk has a wonderful opportunity for studying human nature at close range.

One of the most effective and harmless

This human message should interest you, for every word is true. It is written to help you see yourselves as the average clerk in a store appears to the average woman—your customers, or those whose patronage you seek.

MISS EDNA DU BOIS

Miss Edna Du Bois is a young woman of keen observation, a woman who uses her eyes, her ears and her mind, and who clearly interprets the average feminine mind. She speaks to merchants and salesmen exclusively through the "HARDWARE WORLD" from actual experiences. You can profit by getting to know women from her viewpoint.

Sweet, but saucy; so beware!

customer. Being anxious to please will result in courtesy, cheerfulness, willingness, a real interest in your customer's needs, a thorough knowledge and interest in your own work. With this combination of desirable qualities, it will be almost impossible for the average woman to resist buying anything you may have to offer—in short, you become the irresistible clerk.

I take pride in considering myself a member of that small, select society of sensible shoppers, who, strange to relate, really know just what they intend buying, and approximately the price they wish to pay, considerably taking up as little time and attention of the clerk as possible. Yet I blush to make the following confession, showing how easily a woman is swerved from such good intentions, simply by encountering a disagreeable or rather tactless personality.

An Actual Experience

A few days ago I had occasion to buy some household articles. Naturally I knew just what I wanted and how much I wished to spend. The clerk who waited upon me was equally determined that I should buy what he wished, and insisted upon showing me "something different," which, although desirable, was not what I wanted. He was, I suppose, what most people would judge an "efficient" clerk, but unfortunately he was one of those superior individuals with a "my-dear-child-my-judgment-is-infallible" manner. Oh, how irritating such people are! He knew his business thoroughly, had a convincing line of talk, but I was becoming too "peevish" to be convinced.

Seeing that all his arguments were in vain, and that I was a very stubborn creature to deal

forms of flattery is to look extremely interested in all that the feminine customer is saying. As silence is hardly to be expected on the part of the woman, this means you must "register" intense interest and keep it up, no matter how bored you really are. Just try it.

Real Secret Plain and Simple Kindness

If you are kind you will naturally be anxious to please your customer.

with, he finally, with a superior, pitying smile for my stupidity, showed me just what I wanted, at a suitable price. But do you think the average woman would give such a clerk the satisfaction of a sale? Never! So I looked over the articles coolly and said, sweetly I hope, "Thank you, but these aren't at all what I wanted," and departed, leaving his "cusses" behind me. Wasn't I the catty thing? Yes, I still sympathize with clerks.

A formidable militant type. Never attempt to argue with this species.

Not What You Know, But What You Show

Entering a hardware store further down town, I was met by a clerk whose sunny smile instantly soothed my ruffled feelings. I explained what I wanted, and he cheerfully and willingly endeavored to find just what I wanted. He was a young, inexperienced clerk and knew very little about the stocks. He kept me waiting about a half hour. Did I mind? Not a bit. He finally showed me something of a different make and at a higher price than I intended paying. He had taken so much trouble so cheerfully, to please and satisfy me, how could I have the heart to refuse to buy after all his kindly efforts? He was an irresistible clerk, you see, so I gladly purchased the articles, and left with a much lighter purse, but lighter heart.

So there's a little illustration which shows that kindness minus efficiency scores over efficiency minus kindness. Therefore kindness plus efficiency surely will produce wonderful results.

The cultivation of kindness for all you may come in contact with is surely worth striving for, if only for a purely selfish instead of an altruistic motive. Kindness always pays though material gain is the least to be considered.

Three Graces Above All Others

And here are three little suggestions that may be of value, used in conjunction with kindness when dealing with the contrary sex:

- Select your neckties with care;
- Well creased trousers may help some;
- But above all—
- Refrain from eating onions!

Hardware "White Goods" Sales

Hardware Merchants May Well Feature Such Suggestions You Can Use in Pushing Other Lines

JANUARY has come to be the accepted season for White Sales, so there is nothing like being in fashion. But what can a hardware man offer in the line of white goods? Think a minute—twine, bagging, asbestos pads, axle grease and china. An incongruous medley, you say? True, and for that very reason, if featured together in a hardware white sale they would attract wide attention.

However, if the dealer preferred to feature a single line, there is nothing that offers greater opportunities than popcorn. Not only—in its popped state—does it lend itself to very attractive displays, but it gives opportunity for featuring many related lines—gas stoves and gas plates for heating the corn; wire poppers for holding the grain; and china and glass for the serving of the white flaky kernels.

One of the best displays along this line recently was that of Mitchell's, Philadelphia, Pa., who featured the delights of popping corn, and its suitability for home consumption during the long winter evenings. The object that focussed the gaze of all passers-by was a small gas heater, with gay dancing flames, which could be seen through the open door.

Standing in front of it was a girl (a model borrowed from a local department store) in gypsy carnival costume, popping corn over the

blaze. During the noon hour, when the business crowds thronged the streets, there was an actual girl popping corn in the window, and the aroma of the fresh popcorn that floated out on the wintry air whenever the door was opened caused numbers to hasten inside to purchase a bag of the delicious white flakes.

Of course the firm did not make a practice of competing with the local popcorn venders—the sale of popcorn lasting only one week, and done only to attract attention to popcorn and kindred lines. There was a booth arranged near the front of the store where fresh popcorn was sold, and here were shown baskets of the ears of corn. Little trouble was experienced in inducing people to buy a few ears of corn, and to further its sale little pamphlets were given away, containing recipes for making popcorn balls, popcorn brittle, and instructions for the use of popcorn as decorations.

Another side of the booth was devoted to gas heaters and gas plates. Here was a card:

THE HANDY GAS HEATER FOR WINTER EVENING SPORT

Few modern homes are equipped with the old-fashioned fireplaces, but by means of a gas heater you can pop corn, toast marshmallows, or roast chestnuts, not only in the kitchen but in any room in the house.

A WHITE SALE FOR HARDWARE MERCHANTS

Why not?

Think of the vast variety of white goods that a hardware merchant carries. We need not mention enamel ware, silver ware, glass ware, china, cordage and many similar articles. Cooperate with the other merchants in your town and feature a white goods sale and get the benefit of their advertising as well as your own.

The third side showed corn poppers of various kinds, both single and double, with cards advising the price of each.

But to return to the window display. Down in front were a number of wire corn poppers, some holding shelled corn, and others full of the puffed and creamy flakes. Clumps of ferns were banked in the corners and on a mound in the center of each clump was a vase holding a cluster of big white chrysanthemums (any other white flower would be equally appropriate). Beneath the green fronds of the ferns were two large Japanese dolls, dressed as boy and girl, eating with smiles of pleasure from big china bowls of popcorn placed beside them.

From the ceiling hung a number of large branches of dark red oak leaves, while scores of red and brown leaves were scattered over the floor. Sacks of popcorn stood at either side, one of them having fallen over, with the ears of corn pouring out upon the floor.

Through a catchy newspaper ad they likewise called the attention of the public to the delights of a winter evening at home:

POPCORN!

What would the long winter evenings be without it? Much, however, depends upon the quality of the corn. You don't want to set before your friends or members of your family a dish of half-popped or unpopped grains. The moral of this is to buy where you know you will get good corn—rich, juicy kernels that burst into bloom as soon as they are subjected to the heat of the flames.

That's the kind you always get at

MITCHELL'S

At another time they combined rice popcorn with Chinese lily bulbs in a very effective manner. The background was hung with Chinese panels. If these are not readily obtainable, a good simulation can be made pasting several Chinese napkins on a cardboard cut in panel shape. Suspended from the ceiling were half a dozen Chinese lanterns, lighted at night, the gay lights gleaming through the branches of foliage presenting a very attractive appearance. In the center of the window was a low table, on which was a big bowl of popcorn, and on each side of it a Chinese boy and girl doll.

In front of the table was a bushel basket, from which ears of corn were pouring out, and a sign which advised:

Don't forget to take home a bag of rice popcorn!

The same display called attention to Chinese bulbs, which were to be planted at once in order to bloom for Easter. In a flat dish, partially filled with pebbles, were several sprouted bulbs, while baskets of bulbs were shown at either side, with little cards attached: "Chinese Sacred Lilies Will Bloom in Six Weeks' Time."

Realizing that in this restless age, when everybody is prone to seek amusement outside, anything that tends to keep the young people—and the older ones, too, for that matter—at home is welcomed by the parents, they had printed a leaflet telling of the joys of the simple life—such as popping corn, roasting chestnuts and toasting marshmallows. On the inside were quoted prices on corn poppers, wooden and steel skewers for toasting marshmallows or spitting apples, and shovels for roasting chestnuts. The leaflet was enclosed in an envelope, stamped with letter postage, and sent to a selected list of farmers, grammar and high school students, and housewives, with a special invitation for them to come down and look over the complete line of merchandise of this description, and also to view their gas stove-popcorn display.

RESULTS OF OVER SPENDING

One of the leading causes of the prevailing extravagance is the illusion created by currency inflation. Realities change faster than mental conceptions. A worker who a few years ago was getting \$30 a week, and is now getting \$45, imagines that his pay has been increased 50 per cent, though it can really purchase no more goods than before the increase, if, indeed, it can purchase as many. But under the illusion that his pay has been enlarged, he thinks he can indulge in luxuries which previously he considered out of his reach.

Extravagance leads to increased production of luxuries, which draws labor away from the production of necessities, and consequently makes the supply of necessities smaller and their prices higher at a time when the world can least afford it. But—more's the pity—it has an evil effect beyond even that. An orgy of spending fosters envy and unrest in those not capable of indulging in it; it leads to discontent, strikes and social disorder.

One of the arguments which those who are endeavoring most earnestly to inculcate thrift might do well to stress at this time is the likelihood, amounting almost to a certainty, that the course of the past five years is now to be reversed, that inflation will be succeeded by gradual deflation, that money put aside now will not only accumulate interest, but an increased purchasing power that will make it more valuable as time goes on, and that the rewards of saving will be greater now than they have been for two generations.

Some merchants may have so much system about the management of their business that they slow down the selling, but more have so little system that they slow down the profit.

What Policy Should Merchants Pursue?

THIS question is uppermost in the minds of all retail merchants and, for that matter wholesale merchants as well, in 1920.

"In a multitude of counsel there is wisdom."

No other question is being more carefully considered by manufacturers and jobbers, and we know that the thousands of **HARDWARE WORLD** readers will be glad of the opportunity of an expression of views from all sections of the country. We believe this is one of the most comprehensive views of trade conditions ever presented to retail merchants.

SHORTAGE WILL MAKE HIGHER PRICES

Editor **HARDWARE WORLD**:

We expect a serious shortage in all lines of metalware, including enamel ware. The supply of raw materials for the first six months of next year will not be over 50% of the actual requirements. Needless to say, this shortage will force prices still higher. Merchants, therefore, will do well to anticipate their wants as far ahead as possible.

SCHLUETER MFG. CO.,

St. Louis, Mo.

W. H. Schlueter.

EVERY REASON FOR HIGHER PRICES

Editor **HARDWARE WORLD**:

We believe there is every reason why higher prices on commodities in general will prevail during the year 1920. The general inefficiency of labor and the great number of strikes throughout the country clearly indicates less production, and there can be no hopes of lower prices until production at least equals the demand.

Whenever production can be made to exceed the demand, we may look for decisively lower prices. An excess of production would quickly bring about decreased cost of labor and a decreased cost of all commodities. In December, 1918, we predicted that prices would continue to advance for at least two years, and we see no reason for changing our prediction at this time.

ONTARIO KNIFE COMPANY,

J. L. Burritt, Sec.

CORDAGE MARKET FIRM

Editor **HARDWARE WORLD**:

It is very difficult for us to give you any decided views regarding purchases of products such as we manufacture (Manila and Sisal Rope, etc.). During recent weeks the Manila fibre market has been comparatively strong almost to the point of necessitating an advance in Manila cordage. We trust, however, that no further advances will occur, as we would much prefer to see prices in our line gradually decline to levels more nearly corresponding to those prevailing in pre-war times.

Sisal fibres have been considerably weaker, and after high-priced stocks are used up, it looks as if more or less of a decline in the manufactured goods might take place. This opinion, however, may require changing before your issue goes to press, in view of the possibility of sudden reversals in the raw material markets. Speaking, of course, only in the light of our own experience during recent months, the demand for cordage seems to be continuing remarkably strong, and we believe that merchants would do well to anticipate their rope requirements as much as possible when placing their orders.

WHITLOCK CORDAGE COMPANY,

Louis I. Whitlock, Asst. Treas.

IT'S ALL UP TO LABOR

Editor **HARDWARE WORLD**:

It would be very hard to advise the merchant regarding the proper way to conduct his business during the ensuing year. The demand for merchandise is much greater than the supply and production is not up to normal. Prices have reached the high mark and should further advances come, it will without a doubt prohibit us from exporting. Should production be increased to the point it should be, prices no doubt would remain the same and we all could enjoy a prosperous business for some time to come.

The greatest factor at the present time to contend with is labor. The unrest and dissatisfaction found among labor is hard to explain. The laborer that can neither read or write is receiving from \$5.00 to \$8.00 for eight hours' work. Carpenters are receiving from \$1.00 to \$1.25 per hour, plasterers \$12.00 per day, and labor is producing less at these prices than it did in the past at a much lower wage scale. Business is waiting for labor. We are lacking cooperation.

In the meantime, our foreign neighbors are recovering from the horrible war conditions and unless labor's attitude here changes soon we will find that we are floundering around in a land of milk and honey, tramping it under our feet, while Germany, with the cooperation of every man, woman and child, willingly working from twelve to fifteen hours per day, will have entirely regained her prestige in the merchandise world and consequently will have won the war. We would advise the hardware dealers to buy according to their demand, as there is at the present time no opportunity for speculation.

BUHL SONS COMPANY,

Detroit, Mich.

A. H. Nichols, Asst. Gen. Mgr.

MUST HAVE THE STOCK TO HAVE CUSTOMERS

Editor **HARDWARE WORLD**:

In all lines of business everybody is swamped with orders. If the steel and coal situation clear up these orders will be filled sooner than anticipated, because every manufacturer has been increasing his capacity for some time. We believe that merchants everywhere should buy heavily, for the man who has the stock will have the customers.

FAULTLESS CASTER COMPANY,

Evansville, Ind.

C. B. Noelting, Sales Mgr.

CONTINUED DEMAND FOR SAWS

Editor **HARDWARE WORLD**:

From our point of view jobbers do well to keep their stocks liberally supplied and well assorted, as we believe that the great demand for goods will continue for many months to come.

HENRY DISSTON & SONS,

W. A. Chenoweth, Mgr. Sales Dept.

STAND PAT AND READY

Editor HARDWARE WORLD:

We have been and are still of the opinion that conservatism should be the keynote controlling purchases by both jobbers and retailers. The governing factor should be the ease or difficulty with which various lines of merchandise can be procured. Where supply is ample to permit of frequent buying resulting in frequent turn-over, that course should be pursued.

In those cases where distributors are assured that a scarcity exists and will continue to exist, their interests can only be protected by anticipating in advance of actual requirements. We see no indications in either material or labor markets of an early downward trend in prices. Do not believe any relief from present high taxes can be expected next year.

It is our judgment that merchants should employ every means at their disposal to maintain complete assortment of sufficient stock to supply the actual demand, but avoid temptation to speculate on either prices or demand without reserving to themselves a very healthy margin of financial protection.

COLT'S PATENT FIRE ARMS MFG. CO.,

Hartford, Conn.

S. M. Stone, Vice-Pres.

EMPHATICALLY ADVISE EARLY BUYING

Editor HARDWARE WORLD:

Prices of all sorts of commodities are exceedingly high, and this will undoubtedly result in rather conservative buying on the part of many merchants. It is also true, however, that goods of all kinds are scarce and production is considerably below normal. It seems to us that this means the demand will exceed the supply in nearly all lines for the first six months of 1920, and prices will be firm even if they do not continue to rise.

We believe dealers should place orders early for their reasonable requirements, and should place also a very early shipping date on their orders. We do not advise speculative buying. We do emphatically advise early buying up to the full normal needs of business in nearly all lines.

GEORGE M. CLARK & CO.,

Chicago.

A. F. Millikan, Sales Mgr.

PRICES AS LOW AS WILL BE

Editor HARDWARE WORLD:

We hesitate to be so rash in offering advice, we really think that you ask too much. We can only say, however, as far as we are able to prognosticate, that prices are as low as we expect to see them for some time, with an increasing demand and shortage of production, it would seem that merchandise we are interested in will be as difficult on delivery as it has been for the past two or three years.

DELTA FILE WORKS,

Philadelphia, Pa.

Jos. M. Hottel, Vice-Pres. & Sec.

EXPECT CONTINUATION OF SHORTAGE OF GOODS

Editor HARDWARE WORLD:

Many items in the hardware field are becoming more and more scarce, due to many causes. There is a shortage of labor; there is a loss in efficiency in plant operation, raw materials are difficult to get, and the demand is large. Under these conditions we can see no other outcome than a continuance of the shortage of goods in 1920.

We believe that merchants would do well to anticipate their requirements as much as is reasonably possible. This would appear to be the only way in which the merchant can assure himself of having the goods when they are called for and if he does not have the goods, he, of course, cannot make the sale.

Philadelphia.

THE ENTERPRISE MFG. CO.

HERE ARE ACTUAL FACTS—DRAW YOUR OWN CONCLUSIONS

Editor HARDWARE WORLD:

To outline our ideas on policies that should govern merchants in their purchases for 1920, is indeed a difficult thing to do. We can only give you a statement of facts and then it must be the prime concern of every merchant to formulate and direct his own policy along lines that seem to him best suited to his particular business.

Our prediction, made during the early summer, that a shortage of mechanics' tools would become more and more acute as the fall progressed, has been fully realized and manufacturers of mechanics' tools of every description are today facing staggering problems. Costs are every day increasing and the difficulties surrounding production are far greater than they were six months ago. Despite the fact that foreign exchange works seriously against the foreign merchant, and undoubtedly curtails the volume of his business, still his purchases today are enormous.

These are the facts. You can draw your own conclusions.

GOODELL-PRATT CO.,

Greenfield, Mass.

William M. Pratt, Pres.

REQUIREMENTS IN EXCESS OF FACILITIES

Editor HARDWARE WORLD:

We can only speak from the standpoint of the product that we produce, of the fact that our business is handicapped from a lack of raw material. The requirements are far in excess of the manufacturing facilities and deliveries are quite extended. We can only see a more binding condition so far as products made from steel wire are concerned.

THE PROGRESSIVE MFG. CO.,

Torrington, Conn.

G. E. Hanneman, Sec.

TREND OF PRICES WILL CONTINUE UPWARD

Editor HARDWARE WORLD:

In our opinion, the trend of prices is going to continue upward for at least the first half of next year and the demand for materials in hardware and implement lines is going to remain very active, so that in our opinion, the wise merchant will not hesitate to buy early for his full requirements in anticipation of both.

HUNT, HELM, FERRIS & CO.,

Harvard, Ill.

B. B. Bell, Sec. and Treas.

CAN SEE NO SIGN OF DECLINE IN PRICE

Editor HARDWARE WORLD:

We are of the opinion that merchants should anticipate their wants freely for the first six months of the coming year. The decline in prices that was expected to follow the signing of the armistice failed to materialize and instead prices of practically all commodities have been on the upgrade ever since. The trouble that the manufacturers are having right now both in raw materials, coal and labor, show no signs of any relief and so far as we are concerned our only protection lies in the anticipation of our requirements as far ahead as the manufacturer will permit.

We are not looking for any material advances as a whole, but we most assuredly can see no sign of decline for the first half of 1920. We understand that the larger proportion of manufacturers are going into the New Year with their production sold from four to six months ahead. We, therefore, believe it will be decidedly to the merchant's interest to anticipate his early 1920 requirements without delay.

STRATTON-WARREN HARDWARE CO.,

Memphis, Tenn.

G. M. Baird, Vice-Pres.

CAUTION AND GOOD SENSE

Editor HARDWARE WORLD:

The year 1920 will open up with the most puzzling problems that have ever confronted the business interests of the country. With labor demanding more and more and producing less and less, it looks as if higher prices were still to continue, and yet on the other hand the inability to secure materials and merchandise will unquestionably result in many lines of business becoming stagnated, thereby throwing out of employment, thousands of men all over the country. Unemployment always means less national purchasing power. Prices are governed more by the law of supply and demand than by any other factor. If, by lack of purchasing power due to unemployment, the country retrenches, the big prices will fall.

The steel and coal strikes will have made inroads on manufactured stocks that will be felt for many months and until the void caused by this non-productive period is filled up by increased manufacture, there will be a maintenance of prices. Just as soon as manufacturers have in sight a catching up with their orders, then there may be another turn. The copper situation illustrates what we mean. Despite the determination on the part of each producer and the combination of the producers to maintain the price, the inevitable result from lack of orders will be manifested somewhere among the producers in a bid for available business, and like a row of dominoes, the market will fall. If the buyers come too heavily, then courage stiffens the backbones of the producers and up goes the prices again. It is all a case of "dog eat dog." Caution should be the watchword of dealers and jobbers. Good sense and discrimination must be used and no set rule can any man give for 1920 purchases. The coming year will be one wherein luck will play less a part in buying than ever before. Judgment and decision must be arrived at by a study of question, not usually involved in the purchase of hardware, and a situation not ordinarily related in any way with hardware merchandise, may now be seen to have the most potent reflection on the price of any such commodity.

We believe we are safe in predicting that the merchants who will profit most in 1920 will be guided by these principles: First, sufficient stock to meet the demand of the trade; second, early purchase of such requirements; third, rejection of uncertain credits and prompt collections of outstanding accounts; fourth, keeping optimistic and patient regarding the ills that afflict the country; fifth, avoid politics and judge national legislative requirements solely on a non-partisan basis; sixth, cultivate a spirit of friendship with competitors. Apropos of the New Year, we suggest that all of the old common-place resolutions be forgotten this year, and that every individual in the country make and stick to one resolution that if carried out and lived up to will cure the world and our nation of its troubles, and bring back again the regime of the old days, when men trusted one another, and the spirit of brotherly love and helpfulness was still extant. Let us resolve, one and all, to follow out in 1920, from the first day of January, the simple but wonderful "Golden Rule."

THE LEE HARDWARE COMPANY,

Salina, Kan.

Chas. L. Schwartz, Vice-Pres.

HESITATE TO PROPHECY

Editor HARDWARE WORLD:

We regret that it will be impossible to give you the information desired. At the present time business is exceedingly good and we anticipate for the balance of the year it will continue, but what it holds in store for us the coming year we are loath in anticipating. The conditions are such that we dare not prophesy.

JOBBER OF PECULIAR ADVANTAGES
AND VALUE TO RETAILER

Editor HARDWARE WORLD:

If there ever was a time when the jobber was of peculiar advantage and value to the retailer, it is the present time. We do not believe that the retailer should speculate. His profit should be made on the quick turnover which is a means of keeping the investment at a minimum and the goods in new fresh packages. All information and advice that we have at this time tends to show an extreme scarcity of all kinds of merchandise and higher prices.

SCHWABACHER HARDWARE CO.,

Seattle, Wash.

Sol Friedenthal, V. P.

PURCHASE FOR FIRST SIX MONTHS

Editor HARDWARE WORLD:

It is our opinion that merchandise is entirely too high priced to warrant any speculation on the part of the dealer. Owing to the scarcity of all lines of hardware, however, we are strongly advising hardware merchants to purchase their approximate requirements for the first six months of 1920 and to give permission for shipment at any time the jobber may be able to secure the goods. Unless this is done we believe that many dealers will be unable to procure anywhere near their requirements for the spring trade.

Ottumwa, Ia.

C. S. Harper.

EXPECT BUILDING WILL BE BEYOND
NORMAL

Editor HARDWARE WORLD:

We are buying every dollar's worth of goods that we feel are staple, and urging the manufacturers to ship at once. If conditions right themselves, we feel that the coming year will blossom out to be one of the best in the history of this country, and we feel particularly sure that building will be far beyond normal (under the best times that we have had). The automobile industry is planning for the biggest year in its history, which means that supplies will get a full share of the business, and we have no doubt that all other lines will be benefitted by these great pendulums of industry.

Indianapolis, Ind.

VONNEGUT HDWE. CO.

GOODS WILL NOT DECLINE IN PRICE

Editor HARDWARE WORLD:

We believe merchants will make no mistake in carrying good stocks. The great difficulty that confronts the jobber is the slowness of deliveries after orders are placed. Labor troubles are holding back deliveries and our files are full of invoices discounted in 10 days after billing, large number of which are 30 to 60 days on the road before we receive them, railroad deliveries being very unsatisfactory.

With shorter hours for labor and increased pay in all lines, goods will not decline, but rather advance. Several lines of merchandise are not to be obtained at this time and other lines largely curtailed and we believe the number will increase. Our business shows heavy increases over last year, notwithstanding the above conditions, because we have made special efforts to obtain all goods possible. While the radical element is making all the trouble they can, we believe the American people at large are conservative, and that conditions will gradually improve.

MILLER BROS. HDWE. CO.,

Richmond, Ind.

F. O. Chambers, Sec. and Treas.

SUGGEST ORDER EARLY AND SHIP IMMEDIATELY

Editor HARDWARE WORLD:

From present indications, it appears to us that the shortage of almost everything a hardware merchant sells is likely to become more acute, rather than otherwise. While this condition prevails the tendency of prices will certainly not be downward, and we must expect many further advances.

We believe that the hardware merchants who place their orders now for immediate shipment for all such goods as they expect to sell during the winter and spring, will find that they have acted wisely. Most merchants are, as usual, placing orders now for spring goods to be shipped during the winter or early spring. While this plan has been all right in the past when production was normal, it is not as safe as a plan which is now adopted by many successful merchants who are placing their orders for spring goods and asking for immediate shipment. We confidently believe that the merchant who orders his goods early and has them shipped as soon as they are produced is pursuing the wisest course.

The farmers in this section have been especially prosperous and are buying more than ever before. Not only are they buying more than formerly, but they are buying better goods than ever before. Unfortunately, there are many hardware merchants who are overlooking these new and exceptional sales possibilities, which exist among farmers.

A few weeks ago, E. T. Meredith, president of the Association of Advertising Clubs of the World, delivered an address on the enormous sales possibilities, which many merchants living in farming communities are overlooking.

He stated that recently a very careful survey was made by the Iowa State College of Agriculture for the purpose of ascertaining the buying possibilities that existed in a typical rural district. They selected a township that represented about the average conditions of the state. The township in which the survey was made had a population of 802 persons, which developed the following interesting facts:

There are 142 farm homes in the township and the average size of each farm is 151 acres.

- 40% had running water.
- 33% had bath tubs.
- 11% had electric lights.
- 35% had gas lights.
- 48% had power washing machines.
- 26% had electric or gas irons.
- 54% had carpet sweepers or vacuum cleaners.
- 50% had furnace, hot water or steam heat.
- 93% had telephones.
- 40% had refrigerators.
- 20% had gas cook stoves.
- 33% had oil cook stoves.
- 33% had sleeping porches.
- 56% had pianos.

125 of the homes had an average library of 100 volumes.

Certainly this gives some indications of the immense market there is in equipping these farm homes throughout America.

Some merchants hesitate to buy because prices are high, and they say this condition cannot last forever, true it cannot last forever, but while the condition exists, we should take advantage of it. The time to push sales is when people have plenty of money to spend, and are spending it. When the time comes that the people have no money to spend, then there is no use to put forth extraordinary sales efforts.

That a change will come some time is certain, but when, no one knows. Therefore, it is well for every merchant to follow the wise saying, "Make hay while the sun shines," and make the most of the present

sales possibilities, and in that way, he will lay up a reserve that will help to tide him over when the lean period comes.

TENK HARDWARE CO.,

Quincy, Ill.

B. Tenk, Pres.

TIME FOR CONSERVATISM

Editor HARDWARE WORLD:

Due to the very unsettled market conditions and the lack of our ability to secure goods, the only policy that we can suggest for a merchant to follow during the ensuing year will be a conservative one. We do not feel that this is any time for speculation, and while we do not anticipate declines in the early part of 1920, we cannot help but feel that the latter part of the year will show some revisions.

It is a time when every merchant should watch his stock closer than ever before in his business experience, and would suggest that all stocks be kept as complete as possible consistent with present deliveries. We feel that there is no economy or safety in buying short, for in most cases the activity of one's business will take care of any declines which may occur.

Due to the manufacturers' inability to furnish all of our requirements, we are forced to make liberal substitutions, which, when intelligently made, are accepted with the assurance that we are doing everything in our power to serve the best interests of the buyers.

We believe that it will behoove all merchants to put forth an extra effort to make closer collections than ever before, that they may protect themselves, should the unexpected happen, and while we would not have this accepted in a pessimistic strain, we would again repeat—do the next twelve months' business along the most conservative lines.

MARSHALL-WELLS CO.,

Portland, Ore.

E. C. Ward, Sales Mgr.

TWO UNKNOWN FACTORS

Editor HARDWARE WORLD:

The retail merchants in their purchases for the ensuing year should look ahead as far as possible. The problem of securing sufficient stocks for the ever-increasing demand will be even more difficult than at the present time, particularly on account of labor trouble and scarcity of raw material and the great demand which seems to be never satisfied.

In regard to the trend of the market it is the writer's opinion that in some cases the top has been reached and there should be some recession particularly on the brass goods lines and items that brass enters into. The trend of these prices is governed more on account of the labor conditions than in normal times. Other items do not seem to have reached the crest and the outlook for the year 1920 is a very bright one, particularly for the merchant who has a good stock.

HARPER & REYNOLDS CORP.,

Los Angeles, Calif.

Chas. J. Negus, Sec.

GOODS WILL BE HARDER TO GET

Editor HARDWARE WORLD:

We would strongly advise merchants to anticipate their requirements on seasonable goods. On account of the steel strike there is going to be considerable delay in getting steel products. In fact, it is with great difficulty that dealers will be able to get many other lines of goods. We would not suggest speculating, but are firmly of the opinion that goods in the hardware line will be harder to get next year than for the last two years.

MONTANA HARDWARE COMPANY,

Butte, Mont.

E. S. Woodland, Mgr.

WISE RETAILER WILL BUY WHERE HE CAN GET GOODS

Editor **HARDWARE WORLD**:

At the present time the situation as regards merchandise is more critical than at any time past. A member of our executive corps who has just returned from a visit to the factories, reports that they are not operating with more than 25% efficiency. This, coupled with the present coal shortage and the anticipated freight embargo, would seem to indicate that the wise retailer who purchases his goods wherever he can get them will be the one who will have the laugh on the other fellow before many weeks roll by.

WHITON HARDWARE COMPANY,
Seattle, Wash. John F. Welborn, Pres.

EXPECT 1920 TO BE BANNER YEAR

Editor **HARDWARE WORLD**:

Our buying policy for the 1920 season is and has been to cover our specifications at the earliest possible date, thereby insuring delivery and price. We are now pretty well covered on all of our specifications, and are urging upon our trade the necessity for their placing their future orders to cover all of their specifications, wherever possible. We fully expect the year 1920 to be our banner year, brought about through going into the market and covering ourselves wherever possible.

BASCHE-SAGE HARDWARE CO.,
Baker, Ore. G. P. Lilley.

BUILDING MUST GO ON

Editor **HARDWARE WORLD**:

Because of the tremendous readjustments going forward all over the world affecting political and economic conditions, there is bound to be considerable doubt as to the wisest course to pursue in planning business for the coming twelve months. However, such indications as are visible, appear to us to make it desirable for the retail hardware merchant to secure his 1920 requirements with as little delay as possible.

The immense building needs of the Nation have been held in suspense for upwards of two years and regardless of labor conditions and high price of material, they must be completed, at least to a considerable extent, without further delay. Moreover, assuming the peace treaty will be disposed of in the near future, it is reasonable to anticipate increased foreign trade, which will tend to sustain our markets.

MOMSEN-DUNNEGAN-RYAN CO.,
El Paso. A. A. Martin.

ADMINISTRATION'S ACTS BIG FACTOR

Editor **HARDWARE WORLD**:

We believe a conservative plan should prevail. Every dealer from his past experience should find himself in position to closely estimate his requirements in all lines for the coming year, and being in position to do this he is naturally informed as to what extent he should keep up his stock. If he intends to remain in business it is absolutely necessary for him to have the goods which his customers will call for. These are no times to speculate.

It is the writer's opinion that business conditions will not very rapidly grow towards normal until after the peace terms are definitely settled in the United States. It is also my opinion that if the Government would regulate the liquor traffic—not compelling prohibition, but eliminating the saloons—that much of the unrest in the United States would be quieted.

ANACONDA COPPER MINING CO.,
Butte, Mont. G. H. Greenwood, Mgr.

A JOBBER'S POLICY

Editor **HARDWARE WORLD**:

We are buying seasonable goods for next spring's business and feel that it is perfectly safe to do this. Our idea has always been that it is much more profitable to have goods when they are called for, even though we suffer a loss on them in case of a decline, rather than to be without them when they are in demand. It seems to us that the retail merchant is justified in following the same policy.

HIBBARD, SPENCER, BARTLETT & CO.,
Chicago, Ill. J. J. Charles, Pres.

WATCH CREDITS AND DISCOUNT BILLS

Editor **HARDWARE WORLD**:

There is no question but what there is a world shortage of goods, and labor as a rule is much less efficient than it was during the war. Consequently, with plants running normal or less than normal, a smaller amount of merchandise is being produced. We think it behooves every merchant to buy carefully on the present high standard of values. However, we believe it is safe and wise to provide for their normal spring business, as it looks to us as though the man who is not foresighted enough to do this will be out of goods. The interruption in production of steel has caused a great shortage and there seems to be a great demand for most everything.

Merchants today should watch their credits carefully and those who are not in position to discount their bills should get in this position as rapidly as possible. The merchant who owes nothing and discounts his bills has nothing to fear, come what may. We have certainly had two or three of the kind of years that should have put everyone in this condition. Before prices can be reduced they must stop advancing, and while it looks as though the market were becoming more stable, still we are getting many advances now. We cannot see any lower prices for spring business, although everyone I think would like to see prices gradually work towards more normal levels.

MORLEY BROTHERS,
Saginaw, Mich. R. Morley, Pres.

BUY FUTURES NOW OR NEVER

Editor **HARDWARE WORLD**:

We feel that goods will be harder to secure in 1920 than at any time in our history. That there are no reasons to expect declines for the first six months, and we question that there will be any for the entire year, and that every merchant should immediately place orders for everything that will be needed for the first six months.

The steel strike is putting the factories farther behind all the time, and with the crops bringing more money than at any time in our history, the demand for goods should be increased accordingly, and we, therefore, feel that the merchants with the goods will secure the business. If the merchant places his orders now, I do not believe he will receive all the goods he buys, or will need for the spring and summer business, and really advise that he place orders now for fall goods.

The writer is an ex-retail merchant and up to the past two years has never been strong on a retailer buying futures, but I feel that 1920 will be a great exception. Labor is not producing what it should, or could, and seems to be becoming more stubborn every day, whereas they are consuming more, and in the face of this we can not hope for goods to be plentiful or cheaper, but can only expect the reverse, and we are governing ourselves accordingly.

RUSSELL HARDWARE CO.,
McAlester, Okla. F. C. Russell, Pres.

BUYING HEAVIER THAN USUALEditor **HARDWARE WORLD**:

Our policy up to this time has been to buy heavier than usual for our 1920 requirements, and without some unusual conditions obtaining we look forward to a big business and heavy demand for hardware items, especially building materials, during the coming year. While we have had greatly disturbed conditions during the last few months and the end is not yet, we still believe firmly in the principles upon which our Government is founded, and feel that these disturbances will bring about changed conditions that will result in more and better business conditions for the future.

SUMMERS HARDWARE CO.,

Johnson City, Tenn.

J. A. Summers, Pres.

EXPECT NO DECLINE IN BASIC GOODSEditor **HARDWARE WORLD**:

We never were as nonplussed regarding the buying of goods at any time in the last four or five years as we are at the present time. Our policy, however, is going to be to keep our stock, if possible, sufficiently well assorted to take care of our trade. We do not, however, expect to anticipate an advancing market. There are quite a number of lines of goods we are buying that possibly may advance in value, and there are others that we think are too high. On account of the sentiment that is being worked up against the high cost of living, the Government may take a hand and compel a reduction in values in some of these lines of goods. We do not, however, expect any decline in basic goods, that is iron and iron commodities, when labor does not materially enter into the manufacture of same.

GEO. A. LOWE COMPANY,

Ogden, Utah.

J. R. Cooper, Treas.

**KNOW WHAT THEY WANT TO DO BUT
HARD TO DO IT**Editor **HARDWARE WORLD**:

It is the policy of this firm to keep their stock complete. We do not want to carry a large stock; in fact we prefer to carry as small a stock of this high priced merchandise as our business will permit. But trade is good and profits are satisfactory, and to cut off buying, which necessarily would mean the cutting off of profits, would undoubtedly cause the overhead and general expense to eat up what little profit we made during the past few years.

It is not our intention to anticipate if we can avoid it, but during these abnormal times, we are finding it hard to keep our stock at a minimum and anticipate six or eight months ahead. It is almost impossible for one to plan just what he is going to do. We know what we want to do, but getting by with it is the question. If we can keep our stock in such condition as to fill orders as we may get and await developments from day to day, we shall feel thankful.

HENDERSON & BAIRD HDWE. CO.,

Greenwood, Miss.

J. E. Mann, Vice-Pres.

DIFFICULTY IN OBTAINING GOODSEditor **HARDWARE WORLD**:

We believe it advisable for the retail merchant to purchase any staple or standard goods in reasonable quantities for his next spring's business and to make provisions to take these goods into his house as soon as possible, so as to have them when trade opens next spring. We find an increasing difficulty in obtaining merchandise in a good many lines and while we do not think it is time to plunge, we feel that the man who has stock next spring will reap the harvest.

THE SMITH BROS. HDWE. COMPANY,

Columbus, Ohio.

J. A. Davis, Treas.

KEEP WELL ASSORTED STOCKEditor **HARDWARE WORLD**:

We believe that every merchant should buy all the goods he can buy to assort up his stock so that it is a well assorted stock. We believe that he should get the goods in as soon as he buys them, then he knows he has the goods to sell.

We believe that the live, up-to-date retail man will increase his trade if he will follow these rules and will gain respect of the community in which he is doing business, and will get what otherwise would go to a mail-order house.

BOETTICHER-KELLOGG CO.,

Evansville, Ind.

Oscar Boetticher.

ADVANCES MAY STOP BY JUNEEditor **HARDWARE WORLD**:

We anticipate no declines in the first six months of 1920 and many advances, especially in those articles in which labor is the greater part of the cost.

There should be a cessation of advances towards the middle of the year. We expect a continued scarcity of goods continuing until late in the year, which should hold all prices at or near the top throughout the year. Dealers who do not continue buying in advance of their sales will be out of goods. However, this is not to encourage investment buying to extent beyond the year.

Austin, Tex.

W. H. RICHARDSON & CO.**EXPECT BIGGEST BUSINESS IN HISTORY**Editor **HARDWARE WORLD**:

We are pleased to inform you that we are very optimistic about the coming year's business. Prospects never looked brighter for business. The only cloud in the horizon is the enormous overhead which constantly continues to creep upward. In order that the merchant may continue to function and supply his trade merchandise he must necessarily advance prices in order to take care of the cost of doing business. We place orders well into the future, the slow deliveries making this necessary. It is the writer's opinion that 1920 will prove to be the average merchant's biggest business year in history.

THE EDWARDS & CHAMBERLIN HDWE. CO.

Kalamazoo, Mich.

J. Chas. Ross, Sec., Gen. Mgr.

**THE HOUR OF THE CAREFUL AND
CAUTIOUS**Editor **HARDWARE WORLD**:

Purchases should be made to cover only immediate requirements. Conservatism should be the guiding influence under present inflated conditions. Within a reasonable time, production will pass consumption, when it does, business will drop and values will fall. The wise buyer never loses sight of fundamentals and usually is not caught napping. This is the hour of the careful and cautious.

ROEHM & DAVIDSON,

Detroit, Mich.

C. W. Roehm, Treas.

PAY THE PRICE AND HAVE THE GOODSEditor **HARDWARE WORLD**:

We think it well for all merchants to anticipate their wants, buy goods as far ahead as possible for a season's requirements. As prices are so high, we do not believe it good policy to speculate and buy goods in quantities, which you would have to carry from one season to another. We believe it good policy to pay the price and have the goods on hand in advance of the season, however.

DOHERTY HDWE. CO., Ltd.,

Baton Rouge, La.

A. Doherty.

BELIEVES PRESENT PRICES WILL BE MAINTAINED FOR ANOTHER YEAR

Editor **HARDWARE WORLD**:

I recently returned from the East, where I attended the National Hardware Convention, also visited several factories in New England, Pittsburg and Chicago and talked with many manufacturers. I am decidedly of the opinion that present prices will have to be maintained for some time to come. I look for very little decline in prices, if any, during the year 1920 and it now looks as if goods would be very scarce and hard to get. Owing to these conditions, my opinion is that it would be good business for the merchants to keep their stocks as complete as possible for at least another year.

HUNT & MOTTET CO.,

Tacoma, Wash.

E. F. Messinger, Pres.

ADVISES SLOW ORDERING

Editor **HARDWARE WORLD**:

We are simply going to say to you that we are booking very few goods ahead. We do not at all like the conditions at present and it is the writer's opinion that we are about as likely to have a panic in the near future as a continuation of go & times. When manufacturers are only taking orders for shipment months ahead and then at prices ruling at time of shipment, our advice to the merchant, is to go slow in ordering.

THE PORTAGE LAKE HARDWARE CO.,

Houghton, Mich.

J. A. Leland.

NO RELIEF IN SIGHT FROM PRESENT CONDITIONS

Editor **HARDWARE WORLD**:

If there is any relief in sight from present conditions and high prices, induced by low production and heavy demand, we cannot see it. Merchants, therefore, should place their orders for their requirements for months to come so that they may secure their share of what goods are available.

THE THOMSON-DIGGS COMPANY,

Sacramento.

G. F. Prentiss, Vice-Pres.

PRESENT CONDITIONS WARRANT SIX MONTHS' PURCHASES

Editor **HARDWARE WORLD**:

It is our impression that present conditions of production in our line warrant purchases for six months' requirements.

NICOLS, DEAN & GREGG CO.,

St. Paul, Minn.

W. J. Dean, Vice-Pres. and Treas.

DON'T SPECULATE, BUT MAINTAIN

Editor **HARDWARE WORLD**:

We wish to state that we think the time for speculative buying has passed, but we do believe that a good merchant should keep his stock up the best he can, and we expect to pursue this policy.

Monroe, La.

MONROE HARDWARE CO.

ORDER WHEREVER ACCEPTED

Editor **HARDWARE WORLD**:

We believe that in nearly all cases, orders should be placed now with any one who will accept them, as there is sure to be a shortage in all manufactured articles. Besides, all the mills and factories with whom we have orders, are behind in their shipments from sixty to 120 days.

Muskogee, Oklahoma.

HOOKEE HARDWARE CO.

ANTICIPATE REQUIREMENTS FAR AHEAD

Editor **HARDWARE WORLD**:

Apparently the situation as regards the metal line is such that to acquire stocks it is necessary to anticipate requirements a long period ahead. We cannot see anything in the horizon to indicate that prices are going to decline in the near future, and owing to the fact that there is this great difficulty in getting orders filled in ordering our own stock, we have been ordering for some time to cover our requirements through the summer months of 1920. The retailer does not have to anticipate as far ahead as the jobber, but we can see no good reason why he should not anticipate his requirements just as far ahead as possible for 1920.

HOLBROOK, MERRILL & STETSON,

San Francisco.

H. Morris, Pres.

EXPECT GOODS HIGHER AND HARDER TO GET

Editor **HARDWARE WORLD**:

We believe that all merchants should order freely now for their next six months' supply; we also believe that goods will be higher and without a question more scarce than they are today. Those that will not look far enough ahead for their needs will be short of goods and loss of business will result.

A. DEUTZ & BROTHERS,

Laredo, Tex.

A. Deutz.

MERCHANTS SHOULD BUY AS NEVER BEFORE

Editor **HARDWARE WORLD**:

Our advice to the customer is to buy like they never bought before. It is difficult for dealers and jobbers alike in this section to anticipate sufficiently to insure stock being kept up.

THOMAS-OGILVIE HARDWARE CO., Inc.

Shreveport, La.

R. J. Ogilvie, Pres.

PRODUCTION LESS THAN NORMAL

Editor **HARDWARE WORLD**:

As to the supply and demand, there is no doubt the demand will absorb all the manufacturers can produce, but from the present outlook production is going to be less than normal in all lines.

Columbus, O.

THE GRISWOLD-SOHL CO.

TAKE CARE OF FIRST HALF OF 1920

Editor **HARDWARE WORLD**:

A year is a long time with present rapid changes, and as a consequence we feel that while the first half of 1920 should be taken care of freely and liberally, the last half of the year should be approached with caution, at least until the present labor unrest has quieted down or there are clearer indication of possibilities.

THE WAGNER HDW. CO.

Mansfield, Ohio.

C. C. Wagner, Pres.

BUY CONSERVATIVELY BUT ENOUGH

Editor **HARDWARE WORLD**:

Buy conservatively but enough to have a fair stock of all items regularly carried. Buy standard goods of known quality and demand.

ROGERS & BALDWIN HARDWARE CO.

Springfield, Mo.

REASONS FOR OPTIMISM

Editor HARDWARE WORLD:

We are most optimistic on business for the ensuing year, and from the manner in which our trade is ordering pumps in carload lots for deliveries immediately after the first of the year, it would indicate that at least a majority of the large trade feel the same as we do about the situation.

As we all know, the building trades have been doing practically nothing for the last three years on account of the price of material, but there has been such a general scarcity, in residential building especially, that the rents being demanded must encourage building operations.

As far as our business is concerned, we are going to show the largest year that we have ever had in our history, far greater than any year during the war period, regardless of the fact that the first three months of this year were productive of little or no business, owing to the reconstruction period.

It must be remembered that no building operation is ever conceived unless an adequate water supply is first determined upon and whether this water supply is furnished by a town water system or whether the inhabitants get their water from wells using hand pumps, the fact remains that pumps must be used. They are a necessity, not a luxury, and, therefore, in writing this opinion we are only looking at the situation from the side of the pump maker, though other lines of trade must be benefited in a like manner.

The wage scale still continues to advance and scarcity of labor forestalls any possibility of reducing it. We have not advanced our prices for many months, but there is every indication that we will be obliged to shortly after the beginning of the New Year. Deliveries are becoming slower with each day's orders. It would be our suggestion that every jobber and dealer who handles pumps should avail himself of the present prices and delivery dates to carry him over for at least the first six months of next year.

GOULDS MFG. CO.,
W. E. Dickey, Sales Mgr.

BUY ALL WILL NEED FIRST HALF OF YEAR

Editor HARDWARE WORLD:

We think that it is perfectly safe for merchants to buy all of the hardware items that they will want for the first half of 1920 at this time. The tendency of the market seems to be upward, and with the recent steel strike and coal strike curtailing the output of most of the steel mills and other mills making basic commodities, it looks as though there would be a shortage of material for another year at least.

Of course in our territory the conditions are somewhat governed by the crop situation and we will not know what that is until about the middle of July, and as far as we are particularly concerned we are not going beyond that date.

THE WILLIAMS HDWE. COMPANY,
Minneapolis, Minn. L. H. Williams.

DO NOT EXPECT ANY DECLINE

Editor HARDWARE WORLD:

We feel that the merchants should purchase what they feel they can sell this coming season, at the earliest date possible. As due to the labor trouble and the high cost of living, we can see no reason whatever for any decline in the price of merchandise, and are frank in stating that our orders from our customers for spring delivery are very heavy.

HENRY & ROBINSON HDW. CO.
Omaha, Neb.

ANTICIPATE FAR AHEAD AS POSSIBLE

Editor HARDWARE WORLD:

We believe that the merchants should govern their purchases for the year 1920, as they should have in 1919. In other words, they should anticipate as far ahead as it is possible for them to figure, with the idea in mind of turning their stock the greatest number of times in a year. It is very hard—next to impossible—to obtain staple lines of goods from the eastern manufacturers, which we understand has been brought about through the labor conditions of the country. At the present time the demand for staples far exceeds the supply.

A. M. HOLTER HDWE. COMPANY,
Helena, Mont. E. L. Bue, Asst. Mgr.

QUESTION OF GETTING GOODS

Editor HARDWARE WORLD:

So far as we are concerned, we are placing our orders and getting our goods, as well as covering ourselves in every way possible for material for next year. We have at the present time some material in stock for next year's business, and nearly all of the important commodities specified for are, or will be, in a very short time.

We do not see how anyone can do otherwise if they get any material at all to do business with. A question of standard commodities like nails and bar steel, we hardly know ourselves what we are going to do, as we get no encouragement in any way from orders that have been on file some considerable time. Trade at present is good.

SMITH-WINCHESTER COMPANY,
Jackson, Mich. C. J. Watts.

KEEP ORDERING OF JOBBERS

Editor HARDWARE WORLD:

Present indications point to an exceptionally large volume of business throughout the year 1920, and it will not be so much a matter of how merchants should govern their purchases, as it will be whether they can get a normal supply.

The reduction on production on some of the most staple items handled by the hardware trade has been so great that it would seem almost impossible to catch up with the demand for a long period.

We believe a policy should be pursued of not trying to buy a large stock at one time, but to keep orders flowing into the jobbers as evenly as possible. In that way, everyone will get at least a portion of what they require and no one community will suffer for lack of supplies.

BECK & CORBITT IRON COMPANY,
St. Louis, Mo. Wm. L. Niekamp.

CARRY HEAVIER STOCK

Editor HARDWARE WORLD:

In view of the fact that we have had a lot of labor trouble and a coal strike, it does not look promising for much of a decline in merchandise. At the present time we find shipments slow and if it had not been that we were carrying a much larger stock than usual, we would be short a great many items. Long before the United States went into war we realized that there was going to be a shortage of practically everything in the hardware line and we kept sending our orders to the factories regularly. We kept a very close watch on our stock and by doing this, we have been able to fill 90% of our orders. We don't believe merchants can make a mistake by buying reasonably heavy.

KALISPELL MERCANTILE CO.,
Kalispel, Mont. C. W. Short.

STRIKES CRIPPLE MANUFACTUREREditor **HARDWARE WORLD**:

We cannot see any reason for giving any different advice from what we did a year ago, which was to the effect that the wise merchant will order as far ahead as he possibly can and for whatever amount of goods that he believes he can sell. This is for the well-known reason that manufacturing conditions in this country today are far from satisfactory, brought about by the steel, coal and other strikes. The consequence is that it is going to be exceedingly difficult for manufacturers in all lines of hardware to handle the business that will be offered them during the coming year.

We do not think it necessary to enlarge on the subject, because we believe that every merchant, no matter how small or how remote from the markets of trade, understands the situation thoroughly and will act accordingly.

E. C. ATKINS CO.,
Indianapolis, Ind. N. A. Gladding, Vice-Pres.

SHOULD SPECIFY GENEROUSLYEditor **HARDWARE WORLD**:

In our opinion, merchants should specify generously—ordering as far in advance as possible. Judging from our orders and general progress of business during the past six months, the demand will undoubtedly be greater in 1920 than in 1919, which latter year was greatly in excess of our expectations. We believe prices will maintain their present level if they do not go higher, and so far as this particular business is concerned, we anticipate larger sales during the coming year than any similar period in the past.

J. H. WILLIAMS & CO.

PRICES UNJUSTLY HIGHEditor **HARDWARE WORLD**:

Our views on the subject of buying for next year would be of little value to anyone, as we ourselves are up a tree, and don't know what to do. Our business is showing a very satisfactory increase since the stringent times of last year and the commencement of 1919. The main difficulty at present is to obtain the merchandise, but while we are satisfied prices are either stationary or advancing for the immediate future, we hesitate stocking up for months ahead, and are only purchasing in moderate quantities. Prices are unjustly elevated and must come down.

FINDLATER HARDWARE COMPANY,
San Angelo, Tex. J. Findlater, Pres.

BUY STAPLES OF WELL KNOWN BRANDSEditor **HARDWARE WORLD**:

The writer has just returned from New York, and from a daily contact with large distributors and manufacturers throughout the East, would advise that merchants should refrain from buying short-lived novelties, which are constantly appearing on the market, and should confine their operations to staples, well-known brands and sure moving stock.

In discussing the outlook with manufacturers, it is the general opinion that for the year 1920, the demand for goods will be far in excess of the production or supply, particularly goods that require steel to complete the finished product.

It is going to be extremely difficult for retail merchants and distributors to maintain stocks during the coming year and while I do not advocate that the merchants should throw conservatism to the four winds, he must by all means keep in close touch with his stock of goods, and anticipate his requirements much further in advance than under ordinary conditions or he will find his source of supply unable to care for his requirements, and he may be badly in need of goods.

INLAND IRON COMPANY,
Fresno, Calif. Roy Hall.

PRODUCTION CONDITIONS ARE ONEROUSEditor **HARDWARE WORLD**:

Production conditions continue to be extremely onerous and manufacturers experience difficulty in procuring material at any price named by sellers. This results in higher prices all around with much less than maximum production. We think these conditions will continue for a considerable time and grow more intense as foreign exchange permits other countries to buy here to any such extent as necessary. We can only see one policy for domestic dealers and that is to get the goods at maker's prices.

UNITED ROYALTIES CORP.,
New York, N. Y. L. Bordwell, Pres.

SHOULD CONTINUE SAME POLICYEditor **HARDWARE WORLD**:

We find that the present policy of merchants in general is to buy in much larger quantities than they have under normal conditions, and consequently our position is the same as that of other manufacturers: We are away behind on filling orders. However, in view of the unsettled labor conditions that prevail, we feel that it will be to the advantage of merchants to continue to anticipate their requirements as far ahead as possible.

THE ELASTIC TIP COMPANY,
Boston. George A. Stetson.

INCREASINGLY DIFFICULT TO GET GOODSEditor **HARDWARE WORLD**:

Owing to the steel strike and its lowering effect on steel production and the present situation in the coal strike, we believe that it will be increasingly difficult for hardware merchants to obtain sufficient supplies of goods in time for their requirements.

We believe that it will be wise for hardware dealers to get their orders in as early as possible and in sufficient quantities for their probable demands. In our opinion, it will be much easier to sell merchandise during the coming year than to obtain it.

THE JENNISON HDWE. CO.
Bay City, Mich.

DEGREE OF OPTIMISM DEPENDS ON GETTING GOODSEditor **HARDWARE WORLD**:

We can view the future only with optimism, the degree to be obtained depending upon our ability to get merchandise to supply the demands that we anticipate will come to us.

In our judgment price is assured to remain steady or go higher, hence we have every confidence in buying our conservative requirements. Our own territory is in the best financial condition ever experienced; people are generally out of debt and buying liberally.

OKLAHOMA CITY HDWE. CO.
Oklahoma City, Oklahoma.

The Ludwick Wuest Hardware Co., of Sedro-Woolley, Wash., have just made definite plans for a bright future by the purchase of perhaps the most important business location in Sedro-Woolley, the corner lot across the street from the postoffice, measuring 70x104 feet. They plan to erect a modern building for their store.

DID YOU DO IT,

Or did you forget to send 50c in stamps to keep this paper coming for twelve months? Over two thousand pages of valuable trade information during the year.

A SUCCESSFUL SALES STUNT

An enterprising western merchant tells us he had wonderful success in selling several gross of can openers by mailing out to every woman in his community a circular, as follows:

HOW TO OPEN CANS

A Simple Idea Housewiver Appreciate Knowing About

Housewives, as a rule, have considerable difficulty in emptying the contents of cans containing such articles as salmon, tunny, sliced pineapple, asparagus, hominy, sweet potatoes, and other similar items, especially when it is desired to get the contents out without breaking it up. The usual way of opening cans at the top is not at all satisfactory in most cases, as the jagged edge makes necessary the use of a fork or a spoon in emptying the contents.

Here is a much better way for opening cans, which ought to be used in every home: Tear off the label and lay the can on its side and insert the can opener next to the seam (Fig. 1) and close to the top, then hold the can firmly in an upright position (Fig. 2) and work the opener away from the seam until you have cut around the can. Now turn back the entire top (Fig 3), and you have a smooth edge, over which the entire contents will slide out, without being cut or broken.

Aside from selling can openers, it resulted in the sale of many other articles of household necessities which had been arranged on tables plainly marked. A special day was named and women demonstrators were in attendance, showing the uses of many of them.

TAKING A DESPERATE CHANCE

Hamp Williams, who lives in a country famed for water melons and other good things, tells this:

When the first carload of water-melons arrived in Hot Springs the other day, a darkey lingered in front of the grocer's window a few minutes, and then accosted the proprietor:

"How much is this one, mister?"

"A dollar and sixty cents."

"Does you guarantee it?"

"No, we didn't buy them that way."

"Lawd, white man, if I pays one dollar and sixty cents for dat melon and it's green, I'se a ruined nigger; but I'se goin' to be a sport for once."

JUST A JOB

(Edgar A. Guest)

Is it just a job that is yours to hold,
A task that offers you so much gold,
Just so much work that is yours to do,
With never a greater goal in view?
What do you see at your desk or loom,
Or the spot you fill in life's busy room?
Merely a flickering lamp that burns
With a sickly light as the mill wheel turns
And the same old grind in the same old ways
With all the tomorrows like yesterdays!

It is just a job, just a task to do,
So many pieces to build anew?
So many figures to add, and then
Home for a while and back again?
Are you just a clerk in a gaudy shop,
Pleased when a customer fails to stop,
Finding no joy in the things you sell,
Sullenly waiting the quitting bell?
Are your thoughts confined to the narrow space
And the dreariness of your present place?

Is it just a job, or a golden chance?
The first grim post of a fine advance,
The starting place on the road which leads
To the better joys and the bigger deeds,
Do your thoughts go out to the days to be?
Can your eyes look over the drudgery
And see in the distance the splendid glow
Of the broader life that you, too, may know?
What is your view of your circumstance,
Is it just a job or a golden chance?

LEARN TO FORGET AS WELL AS REMEMBER

The way to remain eternally young is to ruin your memory. Memory methods are the greatest bane of the race. They teach us how to look back so well that, mentally, we begin to walk upside down.

With a ruined memory one leads a life of incessant surprise, like a child. Instead of yesterday tapping you on the shoulder perpetually in your walk through life, you will always find yourself going to meet a smiling tomorrow.

Practice the art daily of ruining your memory. All your troubles will fly up the chimney of the past.

The man who will invent a ready forgetter will be blessed like the god who invented sleep.
—Judge.

If you haven't what the customer wants, offer to get it for him, but be frank about the length of time it will take.

DO IT TODAY

If you have not already done so before you forget it. Send 50c in stamps for the only trade paper in the West. Your money back if you are not satisfied.

The Small Tool Situation

(Address of President L. H. Treadway, of the Peck, Stow & Wilcox Co., Before the National Hardware Convention at Atlantic City.)

THE subject assigned to me is "The Small Tool Situation" and perhaps it can be best treated by a consideration under the three topics of production, distribution and the abnormal conditions under which these articles are now being made and sold in the United States.

Production

As to production, I believe the statement will go unchallenged that the United States produces the best hand tools in the world—best measured by design, finish and general excellence. Not only is this a claim resulting from comparison with foreign makes, but such claim is strongly supported by the efforts of both English and Japanese manufacturers in their attempts, as they are now making, to copy representative American patterns.

Within a few weeks I have reviewed the catalogues of both English and Japanese manufacturers showing a limited variety of small mechanics' tools that very much resembles, and in illustration would have done credit to, those of American production. In the one case, formidable competition may result, but it is likely Japanese competition will be long deferred.

In keeping with the general shortage of nearly all the basic products throughout the world, there is at present a serious shortage of small tools, not because production is not ample under normal conditions, but because despite the best efforts of the manufacturer, production lags and finishing efficiency is at a minimum.

On some items of our own lines, the extension of equipment that should show a liberal increase in output, leaves us with a smaller product than before its installation. It is hardly necessary to state that the labor problem is responsible for this shortage. High wages, shorter hours, scarcity of skilled operatives, and the restlessness of the times conduce to this end. With certain classes of labor, it would appear that work is at a discount, and pleasure has become dominant. These things, no doubt, will correct themselves in time, but for the immediate future they will probably show little, if any, change for the better.

Distribution

As to distribution, good tools bear a close personal relationship to every householder and mechanic throughout the land. We are living in an age of metal—an age of the mechanic. The auto, the tractor, the airplane and even the submarine, with the extensive and expanding uses of electricity, oil and gas, have greatly contributed to the use and sale of various kinds of small tools. All of this means opportunity that the merchant should not overlook.

In viewing the display windows of hardware stores—and surely a hardware store cannot be a real hardware store and not carry small tools—I have been amazed to frequently find small tools entirely omitted and the display consisting of specialties of various kinds to the exclusion of all staples. Small tools can also be claimed as specialties in the special profit opportunity afforded in their sale.

It is a well known fact that successful novelties are profitable, and the enterprise of their construction is reflected in the enterprise of the dealer selling them, but the virtue or popularity of these should in no way retard the natural growth of basic lines like small tools on which there is a continuous demand to meet the ever-increasing needs of the family, farm and factory, mine and mill, and the agencies of transportation and communication.

Small tools of quality adapt themselves to most attractive sales efforts. There is a certain appeal to the observer in their outline, their finish and their excellence. Interest is easily aroused, followed by a

desire for possession that eventually means a sale, and with an opportunity of profit attractive to all concerned.

In an endeavor to meet the wonderful opportunities in the hardware field, manufacturers, like jobbers, have given much thought during the past few years to new selling methods. Think of a woman selecting the hardware for her home, insisting on bronze construction cylinder and three-tumbler locks for security, instead of the contractor selecting the cheapest goods made to keep the price down. Think of a campaign to re-hardware homes and buildings with regularity for the sake of security and to replace a lot of antiquated and used up locks, knobs, etc., of the years gone by, to say nothing of a regard for modern, artistic effect.

This is an important suggestion of what can be done if aggressive enterprise is shown and proper methods employed.

Abnormal and Trade Conditions

Prices at which hardware and mechanics' hand tools have been sold, say for the period of five or six years before the great war, were below a living level, yet it is upon such figures as these that the comparative price structure of later years has been built.

In every depression, up to the beginning of 1907, reduction in wages had accompanied reductions in the prices of finished products, yet following 1907 wages in the hardware and tool industry stubbornly resisted former precedent and I believe largely because of the support of the manufacturer who saw less injury to himself in their maintenance than in making reductions to his employees, who were then feeling the effects of social and economic changes that were to impose upon them the cost of a higher standard of living.

During this same period farm products advanced enormously, and a review of your records, gentlemen, will show that hardware and mechanics' tools continued, in opposition to economic law, to sell lower and lower, until the unfair values above referred to became history. As an example, in builders' hardware—now fairly respectable in demand—plain bevel mortise lock sets sold at approximately \$2.50 per dozen, and later it was ascertained that the costs of eleven manufacturers at that time showed average figures of \$3.52 per dozen to produce the goods. There can be no doubt that the selling of goods too cheaply, in defiance of economic law, is a menace to industry.

When the older level of values began to give way to the advancing values established through war conditions, it was often said that standard items like a saw, a hatchet, a hammer, etc., must be sold at a fixed price established largely by custom and not by cost or worth. This was soon proven to be a delusion and not based on fact, and since then it has been demonstrated beyond all question that the purchaser either knew nothing of such traditions, or paid no attention to them.

It is a fallacy to think that profits to the jobber must come from super-efforts to shave the manufacturer's price. The manufacturer must have a fair price for his products—their value and market conditions determine this. New producing conditions confront us. The general effects of working hours, and wage standardization—uniform prices of basic commodities—state and federal factory and business regulations—freight differentials that temporarily do away at least with geographical advantages in the purchase of iron and steel products—all have contributed to make more nearly uniform the manufacturers' cost of production of similar quality goods upon which costs the manufacturers' selling price must be based. In the belief that weakness of any kind impairs the whole, is it not well to consider carefully the true source of profit to

the jobber, whether it be in an effort to secure unfair prices from the manufacturer, or to secure fair profits from his customer?

The hardware and small tool business cannot be immune from the reconstructive influences of the day. The competitive effects of other kinds of business established on higher price and profit levels, is already being felt. Employees and organization men from this industry are being attracted to more lucrative positions in these other more profitable fields. Therefore, is it not well to seriously appreciate, and at once, that conditions impose the necessity of establishing new standards of business conducted on the basis of the living wage to all concerned? It is the manufacturer's place to manufacture, and the jobber's place to sell, and upon each devolves the duty of seeing his part is well done, and upon both to see that the consumer receives good value and is well served.

Summarizing the preceding, is it not evident that by taking every opportunity to increase distribution of goods to the general consumer, and by putting sales on a solid basis of quality, we are gaining the powerful assistance of public good-will in putting the industry on a just relation of prices to cost of manufacture, rather than on a competitive or traditional basis?

In conclusion, I desire to say a word on the labor question. From current reports of the day, it would appear that employer and employee are engaged in bitter and even deadly strife. Too often it is represented the one is a brute—the other is a slave. I do not believe it. And yet, in some cases, there may be both.

Although the present situation is much confused, both as to capital and labor, big-hearted men on both sides are earnestly striving to do the right. The constant trend is toward betterment, and I venture to say that today the overwhelming majority of working men throughout the United States bear no ill-will toward their employers and are representative of the best citizenship of our country. This despite the vaporings of a lot of misinformed and possibly well-intending so-called social or economic writers who endeavor to continuously keep the issue before the public for a price, but who invest no capital in industry nor wages in labor. It would be well if such voluntary efforts—for a price—could be eliminated and permit the employer and employee under calmer conditions to counsel and cooperate together.

Those of us who have through long association come in contact with the American workman know him to represent the most intelligent and best labor in the world. He assimilates with our institutions; he contributes his thrift to the nation; aspires to own his own home; to educate his children; to perform the duties of the good citizen and to provide for his declining years. Where in all the world is there such a record of accomplishment for the working man as in the United States?

Most of its great men, including captains of industry, have risen from the ranks of labor. Think of what men like Andrew Carnegie, James J. Hill and countless others have done for the world.

Scourged least of all the great nations during the five-year war just passed, a spirit of utmost gratitude should pervade our people with a zeal and loyalty beyond measure to defend the nation's good name and to maintain its institutions, and I have the greatest faith that this fundamentally represents the American people of today.

In contrast, however, to this, forces are at work that would destroy, and organized effort is being made to sow discord and to mislead. These are the things that produce restlessness, but not the necessities of life. Of the first we have too much, of the latter too little, and until corrective conditions can be brought about it is almost a certainty that goods will be scarce and prices high.

As one writer has said, "The salvation of the world today is work—work—and more work."

NO CHANCE FOR ANY DECLINE

Editor **HARDWARE WORLD**:

We cannot see any possible chance for a general decline and are buying as far into the next year as possible at current prices.

W. W. WOODRUFF HDWE. CO.,

Knoxville, Tenn.

W. W. Woodruff, Jr., Vice-Pres.

GIVING SALESMEN AN INTRODUCTION

(By L. R. Putman)

If a salesman came into my office and tried to sell me something I had never heard of before, it would require hours—perhaps weeks—to sell me. But if this man's advertising had been coming to me regularly in the trade papers, I would have known something about his proposition and the matter could have been closed in much less time.

I remember one salesman who came in to introduce a new brand of white lead. He carried along a little outfit with which he molded some lead bullets from his product. This he considered conclusive evidence of its value, and was much surprised that I did not give him an order, especially as he was selling it at a half cent a pound under the market.

But I told him after his company had spent money in the trade journals so I could have time to learn of it, as had the company whose lead I was selling, he could come back and talk to me. I had no desire to stop and make bullets and enter upon a long sales talk, every time a customer came in for a pail of lead. The extra half cent would be too hard earned that way. I would much rather let the manufacturer keep it to use in getting his product before the people by means of advertising.

Every minute of this new year has a money-making value. Make your working hours count in the biggest way possible, and make your recreation hours contributory to greater efficiency in business hours.

An establishment which tolerates poor sanitary arrangements is never progressive, or up-to-date.

SHE KNEW

W. B. Porch says, Oklahoma's children are nothing if not practical.

For an hour the teacher had dwelt with painful iteration on the part played by carbohydrates, proteids and fats, respectively, in the upkeep of the human body. At the end of the lesson the usual test questions were put, among them, "Can any girl tell me the three foods required to keep the body in health?"

There was silence till one maiden held up her hand and replied: "Yer breakfast, yer dinner and yer supper."

TWO IDEAL HARDWARE SECRETARIES

ARTHUR J. SCOTT
Secretary Michigan Hardware Dealers'
Association.

P. J. JACOBS
Secretary Wisconsin Retail Hardware Dealers'
Association.

The hardware associations as a whole throughout the country are fortunate in their choice of secretaries. We doubt if there are any other merchants' organizations who are so fortunately situated as the hardware men, for it is the rule rather than the exception to find these men of a high mental and moral caliber, actuated by a sincere desire to do everything they can to foster and encourage the interests of the retail merchants.

No associations are more fortunate in this respect than the Michigan and the Wisconsin associations. Both Secretaries Scott and Jacobs have served their respective associations well and faithfully for many years. They understand the problems that confront the retail merchants, and they are ever alert to cooperate and assist them in

every possible way. They play no favorites, but deal fairly with everyone, and they merit and have the full confidence of their membership.

The Michigan Association's exhibit will be held at Grand Rapids, February 10, 11, 12 and 13, and the Wisconsin Association's exhibit will be at the Milwaukee Auditorium, Milwaukee, February 4, 5 and 6. Every indication is for a most enthusiastic and helpful convention.

TAX PROBLEMS, QUESTIONS AND ANSWERS

By Peter H. Wagner

Certified Public Accountant and Tax Specialist, Wagner Audit Company, World Building, New York.

The three principal tax worries the average individual, partnership or corporation has, are the Federal Income Tax, the Capital Stock Tax and the State Income Tax. It might be well at this point to note who must file an income tax return this year.

1. Any citizen or resident of the United States having a net income of (a) \$1,000 or over if single or if married but not living with husband or wife. (b) \$2,000 or over if married and living with husband or wife.

2. Any non-resident alien deriving income from sources within the United States, regardless of the amount of such income.

3. Any domestic corporation (other than personal service corporation) not specifically exempt.

4. Any foreign corporation deriving income from sources within the United States.

5. Any fiduciary of an estate. (a) If the net income of the estate is \$1000 or over. (b) If any beneficiary is a non-resident alien.

6. Any fiduciary acting for an individual if the net income is (a) \$1,000 or over if single or if married and not living with husband or wife. (b) \$2,000 or over if married and living with husband or wife.

Every corporation having a net income of \$3,000 or over, except personal service corporations and exempt corporations must calculate their war and excess profits tax on their returns.

Every partnership or personal service corporation must file a return of information upon which no tax is assessed.

The individuals, partnerships and corporations spoken of above must file their return for an accounting

year. In the form of explanation, it is necessary for an individual and individuals of a partnership (partnerships) or corporation to adapt a certain accounting year, which may be either a calendar year or fiscal year.

A fiscal year is an accounting period of twelve months ending on the last day of any month other than December. In the case of individuals (or individuals of a partnership) it is necessary for them to file their return whether the accounting year be on the calendar or fiscal year basis, on or before March 15 for the accounting year thus passed. While corporations who have adapted a fiscal year must file their returns on or before the fifteenth day of the third month following the date of accounting.

Where a corporation finds it necessary to change its fiscal year, before doing so it must apply for permission to the Commissioner at Washington, D. C., and not to the Collector of the District, as was the custom under the 1917 law.

The logical thing for a company to do, is to obtain permission to change the accounting year, before the close of each year in order that in the event permission is refused the original accounting year may be retained.

A new corporation may make its first return for the period from the date of its organization until the last day of the month, which it has selected as the close of its fiscal year, provided such period does not exceed twelve months.

The collector may grant an extension of time for filing returns not to exceed thirty days in those cases where the failure to file the return in time is due to sickness or absence from the United States. The Commissioner is authorized also to grant a reasonable extension of time for filing of returns whenever in his judgment good cause exists.

Where a return cannot be filed on account of inability of collecting the necessary information, within

**E. E. LUCAS**

Secretary of the Pacific Northwest Hardware and Implement Association and also of the Oregon Hardware and Implement Association.

Here are two more deservedly popular, high-grade association secretaries. Secretary Lucas is not given to many words. He goes quietly and unostentatiously about his work in a thorough and systematic manner, and he has the confidence and support of the entire membership. The conventions at Spokane, January 20 and 23, and at Portland, January 27, 29 and 30, will be well worthy of attention by their respective merchants. This year, due to the many problems the retail merchants have to contend with, it will be more than worth while to touch shoulders and get ideas and suggestions from other merchants as to how they meet their varied problems.

H. J. Hodge, of Abilene Kansas, is the secretary of the Western Association, the largest organization of its kind in the country. He has always dealt with big problems, and dealt with them successfully. It is no snap to be in a secretary's position, and the Western associations, with the varied interests and lines handled by their members have always been run so successfully that it is often referred to as an example of just what an association should be. Everyone knows that a large part of the success of the Western associations has been due to the faithful and efficient work of H. J. Hodge for many years.

We urge our readers to make a point of attending every one of these conventions that they can, especially the one which is nearest. It will be time and money well spent. The business-getting ideas and suggestions that you will obtain, as well as the entertainment features this year will prove especially interesting and enjoyable.

**H. J. HODGE**

Secretary of the Western Retail Implement, Vehicle and Hardware Association, whose annual exhibit and convention will be held at Kansas City, January 13, 14 and 15.

the time allowed, a tentative return may be filed giving the approximate data which must be substantiated within forty-five days with a true report. When the true report is filed the copy of the tentative return which was originally accepted, must be attached thereto.

The return should be filed with the Collector of the District, in which the principal office is located. If there is no principal office in the United States the return should be filed with the Collector of Internal Revenue, Baltimore, Maryland. The "principal office" is the office which contains the accounting records.

The return of an individual must be signed by him and executed by a notary public or any deputy collector. The return of a partnership must be signed by a partner and executed as above stated. The return of a corporation must be signed first by the president, then by the treasurer, and executed as above.

It is the intention of the writer to devote about an equal amount of space for questions and answers. The reader is respectfully requested to forward his personal problems and questions, which will be answered in strictest confidence, without publishing any names.

Scott Lawton has resigned as treasurer and manager of the Ophir Hardware Co., Oroville, Cal.

THOUGHTS

(Suggestion for the New Year)

Do you know that your thoughts rule your life,
Be them pure or impure, in the strife!

As you think, so you are;
And you make, or you mar,
Your success in the world,
By your thoughts.

Are your thoughts just and true every hour?
Then your life will attest with great power.

If it's love fills your heart,
Then all hate must depart;
You will find all success,
In your thoughts.

Are you kind in your thoughts toward all?
Then but kindness to you must befall,

As you sow, so you reap,
In a measure so deep,
Either pleasure or pain,
By your thoughts.

Earl Howerton & Co., have added hardware to their stock at Ilwaco, Washington.

**A. L. JAMISON**

President of the Oregon Hardware and Implement Dealers' Association.

**F. W. EBINGER**

President of the Nebraska Retail Hardware Association.

We want our readers to meet these two high-class hardware association presidents, men who have been honored by their respective associations and are likewise honored as successful merchants in their home communities. No men stand higher in the estimation of those who know them or do business with them. They are particularly desirous of extending through our pages an invitation to the merchants of their respective associations, as well as those who are not members to take part in their convention this month.

MANY LANGUAGES OR ONE?

Among the twelve pleas contained in the call-out of the steel strikers there is one not set forth by the union committees, but one which should not be lost underneath the turmoil resulting from the twelve original and specific requests. That it was necessary to use seven different languages, and even nine in one city, to communicate with the workers of this country is a decided call for more assistance in bringing to the foreign born of this country a thorough knowledge of the English language.

In every community, however small, there is an opportunity for each person with a knowledge of English to add their tithe by teaching—individual, group, or class—the English that will put a member of the foreign-born legions into a position to grasp the essentials of pure American citizenship.

The best substitute for the saloon is a bookcase. Whether you find it in a public library, in a bookshop, or in your own home, the bookcase can match every thrill that the saloon ever gave, and add some of its own. If necessary, you can put a foot rail along the bottom shelf and read standing up.

It isn't enough to be always doing something. You must actually get something done.

THE OPTIMIST

I'd rather be a booster
Than a knocker any day;
I'd rather tinge with hope than doubt
The words I have to say;
I'd rather miss my guess
Of another man's success
Than to view his bitter struggle
And prophesy his fall.
I would rather say 'He's coming'
Than 'He's going' when I'm summing
Up the labors of my brothers.
I would rather boost them all.

Unless this country is made a good place for all of us to live in, it won't be a good place for any of us to live in.

—Theodore Roosevelt.

MODESTY PREVENTS OUR ADMITTING IT

Editor **HARDWARE WORLD**:

I want to congratulate you on your last issue.

I must say that I have never seen, or had the pleasure of reading such an interesting selection of readable and helpful articles. I only wish I was able to help such an enterprising journal.

This is no blarney, I mean every word I say.

Kindly remember me to the best man I know of in the editing of trade journals, the owner, the head editor and the publisher.

Brooklyn, N. Y.

HAROLD SUMNER GEER.

**J. M. STONE**

Secretary Kentucky Retail Hardware Dealers' Association.

Another high-grade, hard-working secretary, in whose hands the interests of the Blue Grass retail merchants are so well looked after. Their twentieth convention and exhibit will be held at Louisville January 28 to 31. The merchants of Kentucky and adjacent states will be sure of a warm, Southern welcome and splendid hospitality at the hands of the retail merchants, manufacturers and jobbers attending this convention.

**C. F. TROUTMAN**

President of the Kentucky Hardware and Implement Dealers' Association, who desires, through our pages, to extend a welcome to the merchants of Kentucky and any others who can possibly attend their annual convention at Louisville, January 27 to 30. Mr. Troutman assures us it is going to be the best convention they have ever held.

**NATHAN ROBERTS**

Secretary of the Nebraska Retail Hardware Association.

No man has worked harder or more faithfully, none stands higher among their membership and among those who know him than the veteran secretary of the Nebraska Association. No one is more conscientious in the discharge of duty. In fact, Mr. Roberts has worked so hard recently that he has broken down in health, and as we go to press we learn he is quite ill, but his friends are hoping for his early recovery.

We are advised that George H. Dietz has been elected secretary on account of the serious illness of Mr. Roberts, and he tells us they are expecting a most impressive convention. All the space for their exhibit has been sold, and the Nebraska merchants know their annual conventions are more than worth while.

SAVE ON YOUR FIRE INSURANCE

Hardware and implement dealers may well keep in mind that they can purchase their insurance from reliable companies that will save them 50%. The Retail Hardware Mutual Fire Insurance Co., of Minnesota; the Hardware Dealers' Mutual Fire Insurance Co., of Wisconsin; and the Minnesota Implement Mutual Fire Insurance Co., of Minnesota, have for many years returned a large dividend to each policy holder.

A combined report of these three companies shows:

Total cash assets.....	\$2,768,556.53
Total liabilities	1,266,042.19

Net cash surplus.....\$1,502,514.34

Further details will be gladly furnished by writing Charles A. McKenzie, manager, Pacific Coast Department, 905 Pacific Bldg., San Francisco; also Los Angeles and Portland.

The Spokane Hardware Co., Spokane, Wash., has recently invested \$50,000 in a new plant location in order that it may double its capacity.

Willard E. Craven will henceforth conduct the former partnership of Craven & Huff in the hardware business at Monmouth, Oregon.

Three hundred dollars' worth of fire arms were recently burglarized from the Babb Hardware Co., at Eugene, Oregon.

SENOR SIMON BLEY
President Merceria de la Paz, S. A.

ENTERPRISING MEXICAN HARDWARE ESTAB- LISHMENT

The first glance at the photo of the building at the bottom of this page might lead one to infer that this was a good, strong, safe conservative bank, because it certainly has the evidence of solidarity and strength, but solidarity and strength are necessary for a successful hardware business as they are for a bank.

We want to introduce you to Merceria de la Paz, S. A., of Hermosillo, Mexico, and we are fortunate in likewise introducing you to Senor Simon Bley, the president, and F. A. Seldner, vice-president. Some time we hope to show you a photo of the interior of this enterprising

SENOR F. A. SELDNER
Vice-President Merceria de la Paz, S. A.

hardware institution and their methods of merchandising and displaying their products.

The business was established in 1880 and incorporated in 1915. They do an extensive business in general hardware lines, auto accessories, lubricating oils, paints and varnishes. They are large distributors in their territory for a number of well known American institutions, by whom they are highly regarded.

E. L. BENNETT POINTS THE WAY FOR AIR-WAY

Edgar L. Bennett, general sales manager of the Air-Way Company, Toledo, Ohio, has been associated with the household labor-saving appliance business for the past twelve years. In his early days he was a salesman for the old Duntley and Everson Vacuum Cleaners. Starting in at the bottom, he canvassed from house to house to learn "how" to interest the housewife in vacuum cleaners and washing machines.

After leaving school, Mr. Bennett believed one way to success was in the newspaper business. Consequently he purchased a small paper in the town of Laingsburgh, Mich., and after a successful career as editor and owner of the Laingsburgh News, he set out for larger fields. Taking up advertising and merchandising, he was connected with the A. S. Gilman Printing Co., of Cleveland, Ohio, as advertising and trade-paper copy writer and designer. While connected with this concern he heard of the wonderful possibilities of the vacuum cleaner business. Securing a sample of the old Braham hand suction cleaner made at that time in Philadelphia, he set out to "clean up the world."

In the Vacuum cleaning business he later became connected with the Brokaw-Eden Manufacturing Co. as a washing machine salesman, traveling from coast to coast for them. Before joining the Air-Way Company he was salesmanager of the Crystal Washing Co.

Mr. Bennett has had extensive retail electrical merchandising experience in his career with a thought that some day his chance might come to try and give his experience to the various dealers on how to merchandise electrical household labor-saving appliances. He has planned many successful selling campaigns on washers and vacuum cleaners.

Mr. Bennett says on assuming charge of the sales for the Air-Way Electric Cleaner that he candidly believes in the Air-Way Cleaner, he has a machine that will revolutionize the household cleaning problem. Judging from the plans that the Air-Way Company are about to put in operation, together with the extensive manufacturing plant they already have in operation, the public in general will hear of "big" things soon from these electric cleaners.

The Air-Way Cleaner is not altogether new. It took nine years to put this machine out right. Among the most notable things connected with the sales policy of the Air-Way Company is the fact that some of the

largest public service companies have been selling the cleaner for some time, trying it out, and finding out all about its stability and general acceptabilities. Already England is enjoying Air-Way cleaners just as do the users all over the United States. The Air-Way Company is owned by men who have succeeded in the business world and are financially able to swing the business in a large way.

HUMAN RADIATORS

In hardware stores there's always room—
And will be till the crack o'doom!
For human radiators who
Dispense good cheer to me and you.

Good nature seems to sharpen edge
On cutting tools, and be a wedge
That opens purse, and opens heart
Of patrons with consummate art.

Some clerks seem like highwaymen who
Say: "Stand! deliver!" to me and you;
While others seem to like us more
Than all the cash we leave in store.

STATISTICS AND SAYINGS ON SUCCESS

Here are the seven stages of success for a man who lives to be 70 years of age:

- 1 to 10—Play.
- 10 to 20—Education.
- 20 to 30—Self-discovery.
- 30 to 40—Achievement.
- 40 to 50—Acquisition.
- 50 to 60—Power.
- 60 to 70—Honor.

From 10 to 30 are the years of preparation.
From 30 to 60 are the years of creative work.
From 60 to 70 are the years of reward and satisfaction.—Efficiency Magazine.

Success, notwithstanding the only too prevalent opinion in the affirmative, should not be measured in dollars and cents, but should rather be determined with the equipment at hand. A far greater success indeed is he who, with ordinary equipment and amid discouraging circumstances, nevertheless forces himself above mediocrity, than he who, though perchance occupying a position of prominence, fails to utilize his natural or inherited advantages to their fullest extent.

—Kenneth H. McKenna.

THE IRISH AGAIN

"There's a difference in time, you know, between this country and Europe," said a gentleman in New York to a newly-arrived Irishman. "For instance, your friends in Cork are in bed and fast asleep by this time, while we are enjoying ourselves in the early evening."

"That's always the way" exclaimed Pat, "Ireland niver got justice yit."

The McCann Hardware Co., Ontario, Cal., has recently moved its \$30,000 stock into its new \$20,000 building.

TYING UP A PARTNER NOT TO BORROW MONEY

(Copyright by Elton J. Buckley)

Schenectady, N. Y.

Please advise. I am the member of a partnership consisting of myself and two others. (Do not use name.) The firm was formed five years ago and a regular agreement drawn up, prepared by a lawyer. Clause 5 is that "no partner shall have the right or the power to borrow money on the credit of the partnership, whether on promissory note, or in any other manner, without the consent of the other partners." We figured that unless we all agreed as to the desirability of making loans, we had better make it impossible.

We have been enlarging our store building, spending several thousand dollars to do it. The work was done on an agreed plan, but when we got about three-quarters through, we found it was costing so much more than we expected that two of the three partners agreed to change the plan and stop. The third man, who had been doing most of the financing, was much opposed to this and insisted on going ahead and completing the job. We did not agree, but he has gone ahead and borrowed from the bank, making a note in the name of the firm, enough money to complete the entire alteration. As soon as we learned of this, we served notice on the bank that the loan was not made with our consent and the partnership would not be bound by it, but the president of the bank, in conversation with the writer yesterday, said the transaction was binding on the firm and we should have to stand for it. Is this true, after an agreement and the action taken by us against this particular loan?

E. R. B. Co.

The question to be answered here is this:

After a partner has agreed with his fellow partners not to borrow money on the firm credit without their consent, or after he has been instructed by a majority of the firm, in a particular case, not to borrow, has he still the power to go out and make loans for which the firm will be liable?

Under the well settled law everywhere, he has. This is one of the weaknesses and dangers of the partnership relation, which, however, can scarcely be guarded against even if you are wide awake and do all you can. It makes no difference what you put in your partnership agreement. You can put clauses in there absolutely forbidding your partner to borrow money in the firm name, as this correspondent did, but the very next day he can go out and do it, provided he goes to a bank or to an individual who knows nothing of the partnership agreement. The following, which is from a leading case, is the settled law:

Restrictions on partner's authority, either in the partnership agreement or in a separate agreement, do not bind third parties who have no notice of the agreement.

A partnership is liable for money borrowed by one of the members, on the credit of the firm, within the general scope of its authority, and according to the usual course of its business. Nor will the lender's right be affected by the borrowing partner's misappropriation of the money, if the lender acted in good faith when he loaned it.

Recently a case occurred in my own experience which shows how far this principle is car-

ried. A and B were partners in a mercantile business. In the beginning they made a partnership agreement providing that neither should borrow any money, on the firm credit, without the other's consent. In spite of this A went to a bank and borrowed \$4,765.81, signing a note "A and B, by A." Before the note came due B died. The firm had little or no assets, and when the note came due, the holder presented it as a claim against B's estate. The claim was most bitterly fought, on the ground that the loan was made by A without B's authority and in violation of the partnership agreement; that B had derived no benefit from it and that it would therefore be most unjust to compel B's estate to pay it.

The court decided without hesitation that the estate was liable and must pay the entire claim. This is from the decision: "The partnership agreement was offered in evidence, and it appears that under it neither partner could so bind the partnership, and it is needless to add that third parties with notice would be barred from making any claim. The auditing judge, however, has found as a fact that the bank had no notice of the contents of the partnership agreement, and hence the agreement cannot be offered in bar of the bank's claim."

Of course it follows, since a partner can borrow money and bind his fellow member, no matter what the partnership agreement says or what arrangement they have made between them, that he can also sign notes and bind the firm. As one case says: "Each partner can also sign the firm name to negotiable paper and negotiate it. If issued within the partnership scope it is binding on all the partners, even though signed by one of them without the knowledge or without the consent and against the wishes of the co-partner."

You ask then, how can you protect yourself against the making of loans by your partner which might ruin or impair the capital of the partnership or of the individual members? You can't, except in one way, viz., don't take as a partner a man capable of doing such a thing. Even that doesn't always work.

Charles E. Slane, recently with Sloss & Brittain, of San Francisco, has joined the organization of Fritsch Bros., at Sedro-Woolley, Washington.

NECESSITY FOR EMPLOYER AND EMPLOYEE

We have been a little slow in sending in renewal of our subscription, for three years, we want you to know that our hearts are in the right place. We have a number of other little things to look after, and sometimes it makes me overlook some of the more essential things, one of which is the "HARDWARE WORLD."

I have been a reader of this magazine for a number of years, first taking it when I was with the Erb Hardware Co., Lewiston, Idaho, and find it a necessity for both the employer and employee.

UNIONTOWN HARDWARE & FURNITURE CO

WHAT TO DO AGAINST A CERTAIN CLASS OF DEBTORS

(Copyright by Elton J. Buckley)

Here is a case which it will be interesting to discuss. The amount at stake is small, but the principle involved often touches business men in all lines and also transactions more important. The following letter is from an East Orange, N. J., manufacturing concern:

Somewhat under a year ago we received a letter from what purported to be a thriving company here in the east, ordering a quantity of our calendars and memorandum. They were sent by insured parcel post and our memo followed. Since then we have sent a statement every month and used all kinds of inducements, promises and almost threats, but we haven't even as much as received a reply.

Under ordinary circumstances it would be an easy matter for us to recover our money by bringing suit in a civil court, but we find that this "company" is nothing more or less than an individual man, not associated with anyone else in a business way and conducting his "business" in the name of a company, single handed. What makes matters appear even more complicated is the fact that this man owns no real and very little personal property. He is a machinist by trade, conducting his "business" after working hours and his assets consist solely of the money he earns from week to week at his trade. He has no bank account. We understand that he has "fleece" other concerns out here in much the same manner and they are about as helpless in recovering their money as we are.

Now, although the amount of his indebtedness is comparatively small, only about \$25, we would like to know, were you in our place, what you would do. Surely what the writer would like to do would be contrary to law, and an expert's opinion on this matter will be deeply appreciated.

Now, when we received this man's order we did look him up in Dun's and found that they listed him at between \$2,000 and \$3,000. We looked him up because he stated that we would find him (or them) listed there. Isn't this a misrepresentation, inasmuch as he is not worth \$2,000 nor \$3,000, and probably not worth that many cents? And how could we be successful in bringing suit against him, or suing him, when he owns no real and very little personal property? It seems to be much like the case of trying to get money from a man who doesn't own any.

The questions involved are:

1. Can a man legally do business as a company in the way this machinist did?
2. When a man orders goods by mail and doesn't pay for them, can he be prosecuted for using the mails to defraud?
3. What is the best way of getting after such a debtor?

Generally speaking, there is no law preventing an individual from using a fictitious or concealing name like "General Repair Company." It would be a good thing if there was, because many a fraud is masked behind a name like that. Here and there you will find local laws that require an individual, if he does use such a name, to register it on some public record so that it will be notice to the public as to who is really behind the business. The laws exist only here and there, however, and they in no

way make it illegal to use the company name. So far, this machinist is all right.

As for using the mails to defraud, he has apparently not done that, either. A great misunderstanding exists as to what constitutes the use of the mails to defraud, which is an indictable offense. A man who orders goods by mail and doesn't pay for them, has not used the mails to defraud, unless he ordered with the intent not to pay. If you can prove he did that, you can arrest him. It would not be necessary to actually turn his mind inside out and prove his intent. You could prove it by his conduct. If, for instance, you could show that he made a practice of ordering goods of many firms by mail, and paying no one, I should say that would be satisfactory evidence of using the mails with intent not to pay. You could then complain to the postal authorities, who would arrest him.

In a nutshell, using the mails with intent to defraud means this:

1. Devising or intending to devise a scheme to defraud.
2. Using the mails in order to carry that out.
3. Putting something in the mails for the purpose of carrying it out.

And there are several cases which rule that ordering goods with intent not to pay is using the mails with intent to defraud.

The obtaining of a better mercantile rating than one is entitled to is not a misuse of the mails. It may be a fraud of another kind.

So that where there has been no illegal use of a fictitious name, and where, apparently, there has been no misuse of the mails, what can be done with a debtor who orders goods by mail and does not pay?

The very first thing to do is to place the claim with a lawyer in the debtor's home town. There is very little use in trying to do anything in these cases at long range. The lawyer on the spot can do any of several things, depending on the laws of his state:

1. He can get judgment against him and levy, or sell the judgment.
2. He can attach his wages.
3. He can, after he gets judgment, get the debtor into court and examine him as to why he doesn't pay.

Naturally all these may fail. If they do, the claim had better be charged off to profit and loss.

In this correspondent's particular case, the local lawyer could probably scare him into paying by telling him that he had evidence that he had done this same thing with many firms, which looked like a scheme to use the mails to defraud, and that if he did not pay he would complain to the United States government.

TIRES ARE TRACKS FOR THE TRUCK

Through the satisfactory solution of the problem of producing tires, the modern motor truck has become the most efficient carrier since the locomotive. The evolution of the pneumatic truck tire has been to the truck what the perfection of the steel rail was to the railroads.

In many respects the introduction of the motor truck has not been unlike that of the locomotive some ninety years ago. When the locomotive was ushered into a wondering and incredulous world, its sponsors entertained fanciful visions of its future importance as a carrier, but their "iron horse" was still little more than a giant toy. Road conditions absolutely prohibited its use. Then followed a period during which a steel track was perfected.

First the rails were of hardwood strips, then ribbons of iron were placed on these wooden rails, next all-iron rails, a little later a light "T" rail, and now the heavy rail of today.

The adaptation of the motor truck to present-day traffic uses has been accomplished by conquering just as trying conditions as those confronting the locomotive of nearly a century ago. Gas makes the giant go, but without a suitable track of tires—of rubber, the sap of a tree—its commercial advantages would be limited.

The first trucks were fitted with solid tires, for at that time no other tires were available. But the larger tire companies began immediately to develop a tire that would permit the motor truck to branch out into a broader field of service. The advantages of pneumatic equipment were apparent and now thousands of truck owners are adopting them for use in every conceivable kind of service.

Pneumatic tires on trucks save the load, the truck and the road, permit better time and therefore increase the amount of load that can be hauled in a given time. They have been a great aid in the development of universal use of the truck.

The country has been having an agitation in regard to the effect of heavy trucks on inter-urban pavements. Pneumatic tires on trucks work no harm to the roads. For they are built to distribute the load properly on the road surface. It is not primarily the weight of a truck that harms the road, but the bumping and pounding of the truck. With pneumatics this is eliminated, for the tire tread accommodates itself to the road surface and has no more harmful effect than an automobile tire has.

The motor truck has come to stay. It must be recognized as a common carrier. There is a distinctive field for both solid and pneumatic tires on trucks, according to the service they are expected to perform. In some kinds of service the solid is now and probably will remain the best equipment. In others there is no question about the advantages of pneumatics. The pneumatic is being adapted to many uses that formerly were thought beyond it. Truck manufacturers report an increasing demand for trucks on these tires, all of which indicates that they are gradually being put to new uses, many of which were practically unheard of but a few years ago.

There is no question but that pneumatics will work as wonderful a transformation in the uses of motor trucks as the perfection of a suitable track, when it permitted the locomotive to become one of the appliances of modern civilization.

Stanwood Products

Good Selling Accessories

To the big majority of merchants and jobbers, Stanwood Products need no introduction—their high quality, their reliability, their serviceableness—their demand, have made a lasting impression.

Others seeking the "better grade" of automobile accessories, such as the Stanwood Equipment Company manufactures—Rubber Safety Step Plates, Rubber Heel Plates, Rubber Pedal Plates, Leather Hand Pads for automobile doors, Adjustable Accelerator Foot Rests, will appreciate their high quality, design, materials and workmanship which means the best.

Safety Step Plates for running boards add to car refinement, assure firm footing, and save wear and tear on running board linoleum. Made in various styles, rubber vulcanized to metal plates and also solid rubber segments inserted into metal rubber covered plates. Type B, \$2.65, List; Type C, \$1.60, List; Ford Type, \$1.60, List.

Accelerator Heel Plate furnishes a stable position for heel when operating the pedal. Prevents wearing a hole in the floor covering. May also be used as toe and heel guard on running board. Made of rubber vulcanized to a metal plate. Price 85c each, List.

Conformable Hand Pads add a pleasing appearance to car. Prevent finger marks and wear on finish of car. Made of leather in various grains. Price each, 90c to \$1.80, List.

Adjustable Accelerator Foot Rest sells at sight. The user sees comfort and convenience in this little accessory. Comfortable—relieves leg muscle tension, acts as a foot support. Convenient—prevents unintentional acceleration over rough roads.

Price each \$1.60, list.

Send for a Catalog showing the line of Stanwood Products.
A copy will be mailed upon your request.

GOODS WILL BE HARDER TO GET IN 1920

Editor **HARDWARE WORLD**:

The writer has just returned from an extended visit in the East, having called at a number of the large manufacturing centers and interviewed many manufacturers, and, judging from all conditions that he found on this trip, we are convinced that merchandise will be harder to get in 1920 than it was in 1919. We are going to experience more delays on account of factories being over-crowded with business and labor conditions being unsettled.

We also find that prices on our commodities are still advancing slightly, but cannot help but feel that the peak has almost been reached. For this reason we do not like to advise loading up heavily. We expect to pursue our same old practice of buying sufficient merchandise to cover the requirements of our business, and will refrain from speculating, either by buying short or buying long. On the other hand we are going to anticipate far enough ahead so that we will be sure of the merchandise when we want it.

BALLOU & WRIGHT,

C. F. Wright.

Portland, Ore.

BE SURE OF GETTING TIRES

Editor **HARDWARE WORLD**:

It is our opinion that the merchant's policy should be one to assure himself of deliveries of everything required for the first half of 1920, regardless of almost any other factor. In other words, in the lines with which we come in contact, due to the generally unsettled condition of labor, and also the critical coal situation, it seems to be a question of a very much limited production against an almost unprecedented demand.

CONVERSE RUBBER SHOE CO.,

Hugh Bullock, Treas.

NO DECLINE IN SIGHT

Editor **HARDWARE WORLD**:

As we wrote you in a former communication some months ago, we cannot yet see a declining market and we think that merchants should continue to buy their requirements, without stint. In fact, right now care should be taken to cover on fabric goods.

WESTERN RUBBER & SUPPLY CO.

Los Angeles, Cal.

W. H. West.

MATTER OF GETTING DELIVERIES

Editor **HARDWARE WORLD**:

The policy that should govern merchants in their purchases for the ensuing year is a rather difficult subject, and we do not feel that we are in a position to advise anyone. Personally, we do not believe that the present situation is going to be relieved to any great extent during the ensuing twelve months. In our estimation a merchant who is able to get deliveries will be very foolish not to buy from three to six months ahead. In our line it is a matter of getting deliveries, rather than price, and we are contracting for deliveries way up into 1920.

CAN A MANUFACTURER CUT OFF PEOPLE MERELY BECAUSE THEY SELL TO CUTTERS?

(Copyright by Elton J. Buckley)

The following letter was sent to me as a personal communication, not for publication in any way, but its subject was so interesting and important that I obtained permission to use it, of course with the suppression of every identifying earmark:

Chicago, Ill.

* * * Our position regarding cut-throat competition on the sale of our product is as follows, and I should like your views upon it at your convenience. It seems to me as if the manufacturer who wants to keep his product from being cut to death by cutters is between the devil and the deep sea. He is damned if he does and damned if he don't. We have had _____, a large retailer, as a large customer direct up to last spring, when we cut them off because they persisted in cutting the price, making a leader of the brand, thus arousing the retail trade to complain to their jobbers and discouraging trade. We received so many complaints that we felt moved to do something, so finally we cut off _____ and told them why. They had their lawyer write us about that, to the effect that this was against the competition law, but nothing followed. We have not sold them since last April.

They have obtained all they want of our product, however, through jobbers, that sell them practically on a brokerage, making the goods cost them but little more than when they bought direct. We issued a request to the jobbing trade not to sell _____ and most jobbers agreed, but we have detected two jobbers doing it and these we have cut off after requesting them not to sell _____ and having them refuse. One of these said his lawyer advised him he had no legal right to refuse to sell if _____ produced the money for the goods.

_____ learned right away that we had cut off the two jobbers, which was their source of supply, and they made complaint to the Federal Trade Commission at Washington, which sent a man here. We told him the whole story, and he went away without stating what will be done and nothing has happened up to the present. We believe that after their stock is gone, _____ will have difficulty getting more, because we believe all remaining jobbers will remain loyal and will not sell. Our attorney advises us to wait until something happens, which is of course sound advice, but what is our legal position? Have we done anything which is inimical to the law?

All of the legal questions involved here are covered by the brief provision of the Clayton Anti-Trust act, which says: "And provided further, that nothing herein contained shall prevent persons engaged in selling goods, wares and merchandise in commerce from selecting their own customers in bona fide transactions, and not in restraint of trade."

If what this correspondent has done violates the Clayton act, it violates this part of it. If it doesn't violate this part of it, it doesn't violate any of it.

Two things have been done here which will be interesting to discuss for a minute:

1. Directly refusing to sell this retailer.
2. Refusing to sell jobbers who continue to sell him.

The Federal Trade Commission is taking the position that to do even the first is unlawful; in other words, to refuse to sell a buyer, who is perfectly willing to comply with all your terms, merely because he refuses to sell at a price which you dictate, is unlawful. I do not agree with this, for I believe it to be within the fundamental right—and the permission granted by the Clayton act—to choose your customers. Nevertheless it is entirely possible that the Federal Trade Commission may bring an action against you on that ground, but my judgment is that it will not succeed.

The commission is almost certain to bring action against you for the second thing which you did, viz.: cut off jobbers who continued to sell the cutter. There will be more to that action than there would be to one brought on the other ground; in fact, my judgment is that although a manufacturer has a right to cut off his own direct customer because he continues to cut, it is very doubtful whether he can legally go any further, i. e., systematically cut off other customers whose only offense is that they sell a buyer which the manufacturer himself refuses to sell. I am strongly inclined to believe that the United States Supreme Court, when it gets this question, will halt a seller of merchandise before he goes that far. Consider the result of such a practice if allowed without limit. Here is a trade-marked watch called the Royal. The manufacturer wants the retail price of that to be \$40. A large retailer can afford to sell it for \$35, and he does it, buying direct from the manufacturer. The manufacturer, wishing to protect other retailers who want to get \$40, cuts the first man off, and then cuts off every jobber who sells him. The result is that the first man cannot get these watches to sell, merely because he insists upon his right to fix a price which makes him a fair profit, but not an excessive one. This is pretty close to restraint of trade, and the creation of a monopoly among the dealers who are willing to sell at a fixed—and often excessive—price. Granting the right of a seller to choose his own customers, my judgment is that it does not include the right to control other concerns in the choice of theirs. I don't believe a seller has any more right to hold the resale price that way than he has to attach a condition to the sale itself, which the Supreme Court has repeatedly said was not legal.

One United States Court has already taken this view in a case which arose in Baltimore, but in matters of this sort the only decision that amounts to anything is the decision of the United States Supreme Court.

Arrange your stock so that when it is wanted there is no needless waste of time in locating it.

Like a Wall Between the Motorist and Danger

RUSCO Brake Lining and Clutch Facings

THE WEAVE in Rusco makes it supremely valuable to the motorist and to you; a wall of safety between him and danger;—a necessary business link between you and demand.

Are you taking advantage of this growing demand for Rusco Brake Lining? Superior quality and a year's guarantee are responsible for its universal popularity. You will find the same high quality in Rusco Clutch Facings, Top Straps, Tire Straps, Fan Belts, etc. Send for Rusco book of all products.

TUNGSTEN COMPANY MAINTAINS RE-SALE PRICE IN FACE OF FEDERAL COMPLAINT

There probably has been more trouble with price cutting in the accessory field than in most others, and since the Weed Chain case, manufacturers have hardly known just how to govern themselves with reference to controlling their resale prices.

Of current interest in this connection is the fact that the Federal Trade Commission has served complaint against the Tungsten Manufacturing Company, alleging unfair competition and restraint of trade because of this company's policy in maintaining resale prices and, in one or two instances, refusing to sell the jobber who continued to disregard resale schedule. They also alleged that this policy was detrimental to other manufacturers, whose policy is to allow open competition.

This is a vital subject to the dealer because it simply means that one dealer is buying the same merchandise at a much lower price than another, and is therefore unable to undersell him. The big mail order and cut rate houses would be able under an adverse decision practically to force the manufacturer to sell them, and through their sales method sell at a price which the average dealer would be unable to meet. We believe with the Tungsten Manufacturing Co. that their policy in this matter is absolutely fair, especially to the small dealers, and we are glad that they intend to fight this case before the commission and the courts.

SIoux TOOLS FOR FORD VALVES

The insistent demand of the Ford owner for tools with which to do the cleaning of his motor and the grinding of his valves has been answered by Albertson & Co., Sioux City, Iowa, in placing its complete set of Little Sioux Tools on the market.

It is said that these tools will outlast the life of the car, and will earn their cost many times over, as their cost is less than the cost of one carbon removing and valve grinding job in the average garage. They can be used time and again on a Ford car with no cost and in only an hour or so during leisure time.

The set comprises a valve grinder, a valve seat reamer, a valve refacing tool, a valve grinding compound and a valve spring.

In connection with the selling of these tools the Albertson Company issues an elaborate and thorough instruction book and summary, the A, B, C of Ford Motor Repairing, which has been especially prepared by F. D. Hennessey, president and manager of the Iowa State Automobile and Tractor School of Sioux City, Iowa. The book as well as details for the dealer in connection with handling this line will be gladly sent upon request.

ALLEN FIRE EXTINGUISHER

The whole idea behind Pronto, the new Allen fire extinguisher, is simplicity. It consists of five elements, including a 16-ounce container, a crown sealer cap, an upper and lower patented bracket and the actual fire extinguishing liquid. The device is installed in the brackets mentioned and attached to a wall, door or some other convenient place.

The liquid, which is carbon tetrachloride, is said to be the most powerful fire extinguishing agent known to science. Instead of drenching fire, as does water, this liquid, upon contacting with fire, forms a heavy non-inflammable gas that spreads like a blanket over the base of the flames, driving off oxygen and thus chokes the fire.

Pronto sells for \$1.50 each; six for \$8.50. The Allen Corporation have issued an interesting little folder on Pronto and will be glad to send copies to anyone interested enough to write the home office at 546 Greenwich Street, New York.

SPARK PLUG AND LAMP TESTER

The makers of United Spark Plugs have introduced a new and novel sales help for dealers in the form of a spark plug tester. It is much easier to sell an article if the prospective purchaser can see it in use, and so the United Manufacturing & Distributing Co. designed the tester to provide a quick, convenient and convincing means of testing spark plugs, single and double contact lamps, as well as horns, before the buyer's eyes.

The tester is 5 inches wide and 10 inches high and finished in mahogany, making a handsome store fixture. The base is flat, made to stand on a counter or attach to the wall. Clips for holding a spark plug are fastened to the coil box and contact is made by a pearl push button.

There are two sockets for testing single and double contact lamps and also a connection for testing horns. Attractive illuminated flashing displays can be made by attaching a flashing device in the circuit. This will light two bulbs and keep a plug sparking.

Dealers can secure full information on the United tester and other sales helps from their jobbers, or by writing direct to the United Manufacturing and Distributing Co., Lake Shore Drive and Ohio Street, Chicago.

ULTRA-GLASS DEFIES HEAVIEST BLOW

The readers of our pages have already been introduced to Ultra Glass, the new material for windshields and other glass parts of cars, made by the Glass Founders' Corporation, of Milltown, New Jersey.

Ultra Glass owes its safety and its inability to be broken or shattered to its process of manufacture. Two sheets of the finest glass are welded together by a pyroxylin plastic sheet, thus there are three layers so welded that they form a single unit, resilient, impenetrable, non-scattering.

With a very heavy blow the glass may crack, but it will never break or scatter, because it is impenetrable. It is proof against vibration or concussion, and windows and doors of it will not break under road shock or slamming. An imperceptible color tint eliminates road glare, prevents transmission of the ultra violet rays of sunlight and softens the glare of approaching headlights.

This important innovation in the accessory field is handled in the West by the Western Agencies Co., 285 Minna Street, San Francisco.

The Whitney Hardware Co., Albuquerque, N. M., has recently doubled its capacity by leasing a store room at a different location in that city.

TEXAS LIKES IT GREATLY

In enclosing our renewal for the **HARDWARE WORLD**, we want to tell you that you are putting out a first-class magazine in every way. We like it greatly.

PHIL HOBBS HARDWARE CO.

MOSSBERG

ALL STEEL

Wrenches and Tools

A MOSSBERG Wrench for every need; adjustable, open-end, socket wrenches; socket sets (most complete), special wrenches for automobile, truck, tractor and Ford car equipment—A “Mossberg” for every requirement.

Hardware dealers stock the Mossberg line of **all steel** wrenches because the individual wrench or socket is strong and convenient—it is the result of long study of wrench needs. And this one line is so complete that it meets the needs of every customer; and special sets arranged for the garage man, the expert machinist, the motorist, the marine engineer, sell on sight.

Send for catalog and get acquainted with the various styles and finishes of the Mossberg line.

FRANK MOSSBERG CO.

Wrenchsmiths for 20 Years.

ATTLEBORO, MASS., U. S. A.

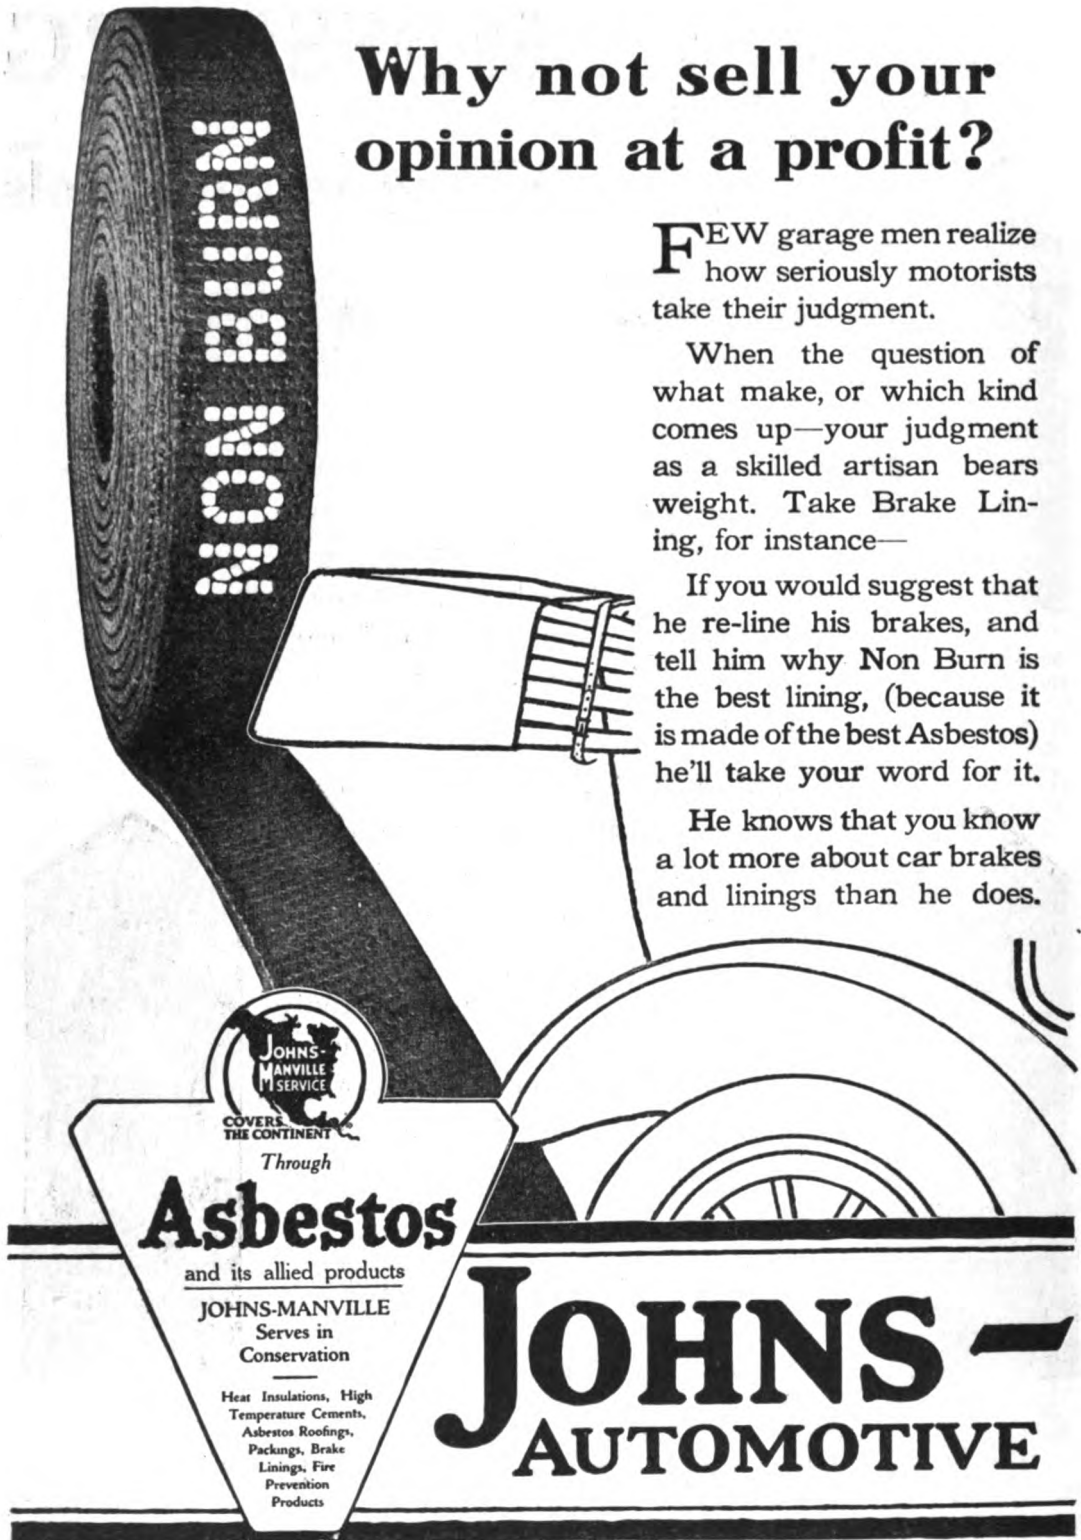

Why not sell your opinion at a profit?

FEW garage men realize how seriously motorists take their judgment.

When the question of what make, or which kind comes up—your judgment as a skilled artisan bears weight. Take Brake Lining, for instance—

If you would suggest that he re-line his brakes, and tell him why Non Burn is the best lining, (because it is made of the best Asbestos) he'll take your word for it.

He knows that you know a lot more about car brakes and linings than he does.

Mission of the Advertising Pages

(By William S. Power)

"THE MAN who says he never reads advertisements, either is a proper candidate for the Ananias Club or is lacking in common business sense."

That is the way a big business man, the head of a successful corporation, put it in talking to his selling force a few days ago.

The advertising pages are a barometer of business.

They are consulted by practical men and women just as the financial and social pages of the newspapers are consulted for the information they contain.

Time was, when the advertising pages were merely a directory of things for sale.

Today they rank side by side with the editorial pages in the vital interest of the messages that they carry.

One does not often hear a slurring remark these days as to the unreliability of an advertising message.

Advertisements as a class have ceased to be unreliable.

Superlative and exaggerated claims have lost favor with advertisers.

No part of a publication today is more carefully edited and more ruthlessly purged of unreliable statements than the pages that carry the advertising messages.

Advertisers have discovered that frankness and conservatism and truth are the strongest allies that they can have in their efforts to win public confidence.

And so it is that today, as never before, men and women scan the advertising pages as carefully and with as deep an interest as they give to any other part of the magazines.

The advertising pages reach out to you in a spirit of friendship and cooperation.

That is their mission—to make a friend of you and to win your good will.

To be sure they have something to sell you—but that is rather a secondary consideration, a by-product of advertising, if you please.

The big elemental aim is to win your good will—when that is accomplished, the selling will follow as a perfectly natural result.

Look through the advertising pages of this magazine—note the carefulness with which the messages have been prepared—sense the friendly hand-clasp that they seem to extend toward you.

Then analyze them for yourself.

You will find that the products that are most persistently and effectively advertised are almost universally the best and most dependable products.

That is a perfectly natural illustration of the law of cause and effect.

An advertisement is a pledge. The man who issues it puts himself on record. The buyer expects more of him—and almost invariably he measures up to expectations.

The development of advertising has put business on a higher plane. It has created a finer code of business ethics. It has made possible better products and lower prices. It has immeasurably increased the comforts of life by bringing within the reach of all the conveniences and luxuries that would otherwise be enjoyed only by the few.

THE LAND OF PRETTY SOON

I know a land where the streets are paved

With the things which we meant to achieve.

It is walled with the money we meant to have saved

And the pleasures for which we grieve.

The kind words unspoken, the promises broken,

And many a coveted boon

Are stowed away there in that land somewhere,
The land of Pretty Soon.

There are uncut jewels of possible fame

Lying about in the dust,

And many a noble and lofty aim

Covered with mould and rust.

And oh! this place, while it seems so near,

Is further away than the moon;

Though our purpose is fair, we never get there,
To the land of Pretty Soon.

The road that leads to that mystic land

Is strewn with pitiful wrecks,

And the ships that have sailed for its shining strand

Bear skeletons on their decks.

It is further at noon than it was at dawn,

And further at night than at noon.

Oh, let us beware of that land down there—

The land of Pretty Soon.

—Ella Wheeler Wilcox.

NOTHING LIKE TRYING

Uncle Sam Hodge came down from the the Kentucky mountains with his yearly produce to market. His team of oxen was somewhat weary with a two-days' pull. But when Sam reached the city limits he was confronted with the sign "Speed limit, fifteen miles an hour."

He pulled his whiskers a moment in silent meditation, and then drawled out to his oxen. "Well, I know darn well we'll never make it, but we'll do our doggone best."

VICTORY OVER SELF

"I count him braver, who overcomes his desires,
Than him who overcomes his enemies;
For the hardest victory is the victory over self."
—Aristotle.

Strong desires is nearly always the motivating influence in every life. In fact, the life without strong desire, is almost sure to be purposeless—a ship without a rudder.

Some desires are worthy and legitimate, and others lead only to weakening self-indulgence. How then are we to determine which desires to heed and which ones to crush; for the right desires lead us up the hillside and into the sunlight, and the wrong ones lead us down into the valley, where the shadows are deep.

There must be some test—a simple test which we who run may use. If there is such a test, and if its use is simple and practical, why should it not be clearly defined, that we may one and all, be made safer by carrying it in our pockets.

No reason in the world, and a very small pocket in the mind, will suffice to stow away such a valuable aid to right thinking and right living. It is the small golden rule of measurement, positive, clearly marked and unmistakable. "Do unto others as ye would they would do unto you."

If we heed this, we shall be brave enough to be unselfish, kindly, honorable, thoughtful and, best of all, forgiving.

Have you ever realized that it is an exceedingly small individual who holds a grudge and who rolls it as a sweet morsel constantly under his tongue?

The story is told that President Lincoln earnestly desired to see General McClellan, and one night went to the General's house. He waited patiently for a long and tedious time.

In the meantime, the General had come in, gone stealthily up to his own room and retired. At last, he sent down this message to the waiting statesman: "Tell Abe Lincoln that General McClellan has gone to bed."

Later someone exclaimed in indignation at the treatment and message, and the great President said:

"That is nothing. I would gladly hold General McClellan's horse that he might serve his country."

Repeatedly, we say:

"Forgive us our trespasses as we forgive those who trespass against us," not realizing perhaps that we are not big enough, and fine enough, and strong enough to carry out this simple requirement for our own safety and happiness.

When Tennyson pictures the ideal character in King Arthur, he sums up the highest attribute of noble manhood as the ability and willingness to forgive.

In business life there is much to overlook, much to forget, for petty annoyances and sometimes actual wrongs sting and burn, but the man is brave indeed who can overcome his own questionable desires, for in them he has a foe constantly within himself; and he is indeed a victor if he can discipline self to the point of complete mastery.

GOOD WILL AND DOLLARS

The National Association of Credit Men recently published the following interesting article, entitled, "Good Will and Dollars":

"The most valuable of your intangible assets is good will. You cannot put your finger on it, but it is there and it plays a prominent part on the profit side of your ledgers. Good will can only be obtained, whether as buyer or seller, by a carefully built up reputation for fair dealing. To cancel orders arbitrarily or to return goods without cause, simply because by so doing one can escape an unforeseen loss, is to endanger one's reputation for fair dealing with the consequent loss of good will. And good will lost is difficult to regain. If you desire to cancel an order or to return merchandise let it be brought about by negotiation. Remember that the other man has rights and losses to consider. Permanent good will is worth more than immediate dollars."

During the past several months the association has conducted a vigorous campaign to eliminate the unnecessary returning of merchandise and reports gratifying results from the campaign. The campaign is directed towards individuals and firms who make a practice of returning goods without cause for the mere purpose of trying to shift their losses to the firms from whom they buy. Returning goods or cancelling orders without justifiable reasons is not an honest business practice, and the campaign to eliminate it is a promotion of fair business dealing.

TOO MUCH RISK

"Do you cycle?" asked the insurance agent.

"No," replied the applicant for a policy.

"Ever race in a motor boat?"

"No."

"Drive much in a car?"

"Never."

"Ever go up in an airship?"

"Never want to."

"Sorry we can't insure you. There's too much risk insuring mere pedestrians."

HOW TO ADVERTISE A RETAIL STORE

(By Frank E. Fehlman)

There are four simple things which will guide any retailer in improving his merchandising methods:

1. Know the merchandise.
2. Know the customer.
3. Know every medium in the town which can be used for advertising.
4. Understand the importance of short, terse, but very specific advertising copy. Of course, this is the hardest thing in this quartet of fundamentals.

The way to study merchandise is to start with a wholesaler or his salesman, who sells you your goods. Before he leaves town, he should be made to dictate a complete description of the merchandise you are buying, which can in turn be given to your salespeople on the arrival of the merchandise and discussed by them in detail.

More than one retail store with which I have been connected has used this method and our competitors always wondered why our salesmen, while paid no higher, could give such splendid descriptions of the merchandise they were selling. It was because we made the manufacturer tell us the whole story of the merchandise, the raw product, how it was assembled, where the costs were reduced, how the shipping facilities were better, and how the final arrival of the merchandise in our store was really an event, because the merchandise could give our customers better style, more comfort, better wearing service, lower price, etc.

Millions of dollars have been employed in advertising retail stores, which might well have been saved and put into better store fronts, larger salaries or higher rents, and would thus have returned twice as much in net revenue.

The five and ten-cent stores advertise more by buying locations. They don't require salespeople of genius. All they need is ordinary individuals who know how to push a cash register key.

The newspapers of the United States are helping retailers more today than they ever did before by having service men who can write good advertisements, and who know how to pick out the real story of a store, but the best advertising in the world is that which is done by the store owner himself or an employe whom he trains to express the personality of the store itself.

Gain in Knowing Customer

The second essential is to know your customer. If you are advertising to millmen, railroad men, or farmers, talk service, wearing qualities, and the adaptability of your merchandise to the lives of these customers.

Selling a Packard car to a banker is an entirely different proposition than selling a Maxwell or a Dodge to a man who has saved up a thousand dollars and can afford a comfortable family car. Different arguments must be used.

Selling a \$35 serge suit is entirely different from selling a fancy Paris tweed to a broker on Fifth Avenue, who will gladly pay \$125 to \$150 for a suit which will not wear one-third as long as the \$35 serge.

Unless you know your customers, you can't write advertising to reach them. Of course this means more time and more thought put on the advertising.

It means the dividing up of copy. If you are selling \$25 suits of clothes for the working man, forget the banker, the professional man, and direct your copy to these particular customers. It flatters them, even though they do not buy the next day.

In choosing advertising mediums, dealers in some towns use moving pictures and street cars and derive splendid returns from their investments. Others spend all their money on street cars.

One merchant in Milwaukee built his business from street cars, and still uses them for his show advertising.

Other merchants have used bill boards, and spent over half their appropriation. The thing to do is to study your own local market—know your merchandise, know your customers, and then plan to use mediums that will get you the quickest results at the lowest possible cost.

Sometimes you have to experiment for two or three years before you can finally pick out one thing which delivers the greatest net returns for the least amount of money invested.

In general, we find that the newspapers are the backbone of any advertising campaign for retail merchants to use.

There are certain positions in a newspaper which are better for you and it is up to you to find out where these positions are. In a small town (under 5000 or even up to 25,000) your advertising pulls better if it is on the page which carries local news. I know one dealer who pays a premium of fifty percent for a certain position on the local page for a period of eight years. He has proved conclusively the value of this space. After you have picked out the various mediums you expect to use, apportion a certain amount for one year. If it is \$2000, stick to your \$2000. If you expect to have special propositions, lay aside \$200 for that purpose, but never exceed that amount. The mere fact that you have an arbitrary figure set the first of the year, makes you a better buyer of space, and more exacting in checking up your returns.

Not one merchant in 100 does this today, but more will do it in the next ten years. The national advertiser has been compelled to do this. Otherwise his advertising would have cut into his net profits to such an extent that his banker would question his ability to conduct the business.

Preparing Your Copy

After you have studied your medium, you are ready to prepare your copy. The psychologist has given us a great many things well worth considering in preparing copy. One of the first things is that an average person can read a line of three to seven words at one glance, which contains not more than two syllables.

Why go against this law of vision? Why string out a headline of 14, 15 or 16 words?

One thing to watch continuously is the way the newspapers handle their headlines in their big stories. Newspapers are compelled to tell the story of the world's events in headlines. Few people read the complete story. They read the headlines, and the sub-heading and pass on.

Advertising is competing with the news columns of a newspaper, so it follows that you must have your headings as interesting as the news headings, otherwise they are not read at all.

This requires time and study, and not everyone can do it. After you have mastered the art of getting your headlines down to a few words, you are then ready to prepare your copy. Women will read from 150 to 200 words, while most men will not read more than 50 or 60.

Any of the big mail order houses offer splendid examples of terse, specific copy. Mail order houses depend upon pictures and words to sell merchandise.

Last year, the largest house in this country sold more than \$160,000,000 of merchandise that way. Get one of their catalogues, and study the lines of merchandise that are similar to yours. See how they describe it. Then plan your advertising along the same general lines.

Specialty shops which are selling style, prestige, Paris importations, etc., do things in a different way, but the average merchant depends upon head lines, clean cut illustrations, and short copy to sell his offerings.

The next ten years are going to see a great change in retail store copy. Syndicate service and special writers on newspapers have done a great deal, but the

Mirro Stays Years in Service

There is solid, substantial virtue in Mirro Aluminum. For Mirro wears—into the second generation, if given a little care—and long life but mellows its lustrous beauty.

And—from the standpoint of utility, economy and convenience—Mirro is wholly modern. It is light, hence easy to lift. It is a wonderful conductor of heat, therefore a fuel-saver. And its many features of convenience make it the most efficient cooking ware in the world.

Note them well in this Mirro Convex Kettle:

(1) Handle-rest ears hold bail in three positions and prevent it from coming in contact with sides of kettle. (2) Tightly rolled, sanitary bead, free from dirt-catching crevice.

(3) Inset cover prevents boiling over. (4) Bead of cover upturned, thus protected against steam and liquid. ☆(5) Rivetless, no-burn, ebonized knob, an exclusive Mirro feature.

(6) Convex sides prevent contents from pouring off when liquid is being drained. (7) The famous Mirro finish.

☆(8) Famous Mirro trade mark stamped into the bottom of every piece, and your guarantee of quality throughout.

Remember, also, that Mirro is the perfected product of more than a quarter of a century's experience in aluminum making; and that with all its beauty, utility, and convenience, it costs no more than the ordinary kind.

Aluminum Goods Manufacturing Company, General Offices: Manitowoc, Wis., U. S. A.
Makers of Everything in Aluminum

MIRRO ALUMINUM

Reflects
Good Housekeeping

A Message to Merchants—The Ladies' Home Journal, Woman's Home Companion, and McCall's Magazine for February will carry this Mirro Aluminum advertisement, full page size. It is one of the series, published every month in the year, which is influencing Woman, the buyer for the great American family, in favor of Mirro, and educating her, point by point, as to the merits of Mirro construction.

retailers themselves are at last alive to the importance of good copy and they are devoting a certain amount of time to it themselves, employing special writers.

If the retailer could just remember that his advertising must sound like he talks, and must breathe his own personality, he could not go very far wrong in the preparation of his copy.

Encourage your store employees to submit ideas for copy, and don't expect every advertisement to bring people in out of breath, money in their hands, anxious to get the merchandise you offered the day before.

Advertising works slowly, but surely. It is planned and conceived in the idea of building up business.

Customers want news, but they want it told briefly and with an appreciation of their needs.

Put more money into the brains preparing your copy, and your space will yield tremendous returns.

It took the national advertisers a long time to learn this truth, but most of them now know it.

Project yourself into your advertising. That is the kind of advertising people will read.

T. A. MITCHELL VISITS FACTORIES

T. A. Mitchell, of the Mitchell Mfg. Co., left the Pacific Coast on December 8 for his annual visit to the factories and manufacturing centers of the eastern states for whose ware he is the western representative. He will go as far as Boston in his travels, and with the close contact that he will have with eastern divisions and with his principals, he will be well prepared to serve the trade to the best advantage during the coming year by knowing the conditions of production and manufacture. Among Mr. Mitchell's accounts are such prominent items as the Auburn Ignition Mfg. Co.'s spark plugs, the Legalite Leds, the Duntley Timer and the Ashland Mfg. Co.

CLOVER MFG. CO. OPENS CHICAGO BRANCH

The Clover Manufacturing Co., Norwalk, Conn., has opened a new branch at 601 West Adams Street, Chicago, Ill., with a warehouse fully stocked with Clover Grinding Compounds and Clover Lawn Mower Sharpening compounds.

Distributors in territory contiguous to Chicago will find this Clover branch a great convenience. The new branch is prepared to take care of orders at once.

Last January the Clover Manufacturing Company opened its San Francisco Branch at 553 Howard Street, and the opening of the Chicago branch follows out the well-known Clover policy to render to its representatives the most complete service possible.

The Federal Trade Commission at Washington has just issued a citation requiring the men behind the Chicago company styling themselves as the "Good Wear Tire and Tube Company" to appear before that commission and explain the reason for that name and, if possible, to show cause why they should not be required to desist from using that name in violation of the law.

In the citation it is brought out that this Chicago firm engages in the business of buying up second-hand or used automobile tires and then attempting, by cementing two of such used tires together and otherwise treating them, to produce a tire for sale. In the disposition of this inferior product it has been the practice of these people to advertise by catalogues, circulars, and otherwise, in an attempt to lead the public to believe that such tires are new and unused.

Has your being in business improved you? Good! We are glad of it.

Has your being in business improved IT. That's fine and dandy—the best ever.

TRADE TEAM WORK

With the one word, "teamwork" an idea is presented that could hardly be explained in a whole sentence. Nothing can exemplify the thought it conveys so forcefully to the American mind as the work of a football team that has been drilled to a high state of proficiency.

Visualized it brings a picture of cooperative effort, with each member of the squad a unit, a cog in the machine. To be a good cog he must be in harmony with the entire machine and play his part so that the entire machine will move without friction.

When the signals are called he must know what they mean and the exact part he is to take in their execution. One untrained cog often spoils the play, and the game is lost.

Listen to the quarterback snap his signals. Watch the whole team respond. Each one is doing something, and every action carries a significance.

Many a business man has stood by the side lines and marveled at the effectiveness of the "teamwork" of a football team. No doubt many a paint dealer has thought of its significance in connection with his own business, as the conviction of the "punch" it carries was impressed upon his mind.

But did he make use of that conviction—did he apply it to his own business? That is the pertinent question.

Mr. Dealer, have you organized your forces for "teamwork?"

Mr. Employee, have you properly trained yourself to be an indispensable member of the team in which you are working? These are questions whose answers spell success or failure.

This is an age of cooperative and coordinated effort. The individual who tries to work separately is often out of accord with his own organization, and will find himself continually opposed to the concerted efforts of his competitors.

As soon as the customer has made a purchase and handed you his money many salesmen will begin to put up the stock, or go on doing something else as though the matter was closed. While the patron is waiting for change, chat with him pleasantly, or in some way show that you are still interested in his opinions or wants. Remember the transaction isn't closed until it is completely closed.

MIGHT BE IF SHE DID

A woman and her daughter were at sea during a terrific storm. After a silence of some time the mother asked:

"Are you seasick, dear?"

"No, I think not, mother," replied the girl, "but I'd hate to yawn."

Grow Through Overcoming Difficulties

SANDOW became the strongest man in the world, but he was a sickly child, his parents were afraid he wouldn't live. Sandow, too, was afraid he wouldn't live—and he wanted to. Every man can always have what he wants if it is within the laws of nature, and if he wants it hard enough.

Nature intended Sandow to live, and Sandow wanted to live hard enough to do the things necessary to keep himself alive.

He went to work upon a systematic series of exercises designed to develop the faulty functions and members of his weakly body, and he didn't get tired or lose interest after the second week. You see, Sandow was fighting for his life, and that's a powerful motive.

So Sandow worked away at his exercises until, from the sickliest child in the neighborhood, he became the strongest man in the world. And, meanwhile, hundreds of thousands of sickly children had given up the struggle because they didn't realize, as Sandow had realized, that obstacles are things to be overcome and not things to be overcome by.

Overcoming Obstacles Is the Quickest

and surest path to power, since power is the product of practice, and practice is absolutely necessary to the attainment of skill in any form of activity. The more we do things the better and quicker we can do them.

Viewed thus, an obstacle is not a handicap, but an advantage, in that it supplies the motive to practice, the urge to work hard to overcome the obstacle and to become equal to the average of the race.

Following this urge, the one who works becomes not equal but greater, and continually greater still, than the average, since to overcome his obstacle he must acquire the priceless habit of hard work.

Indeed, there is no such inequality among newly born members of the human race as may appear upon superficial inspection. Here there is wealth, and there poverty, it is true; but where there is wealth, there is little urge to action; and where there is poverty, the instinct of self-preservation forces the individual to develop his power and his usefulness to society.

No Barriers That Can't Be Overcome

In a land like ours, in which there are no artificial and arbitrary barriers of caste to write "thus far and no farther" across bars to ambition, think how many of the leaders in politics, business, the professions, spring from the ranks of those who were "handicapped" in youth by the golden spur of poverty. Think, then, how few of our real leaders inherited their wealth.

The old epigram of "Three generations between shirt sleeves and shirt sleeves" taps a

law of nature. Man must work to live, because his sole reason for existence is to get things done. Nature hasn't cluttered the globe with humans just to have them, but to develop them. And development is the product of exercise, which is simply another way of saying work.

So it is that those who start with the "handicaps" often end with the laurel wreaths or the silver cups or the sides of bacon, whatever may be the prizes.

Unfortunately, many of those who start with handicaps never finish at all. You will find them by the roadside complaining bitterly about the inequality of life and the hopelessness of trying to get ahead.

"Not Thinking" Causes Most Failures

They are not quitters, necessarily; but—and this is important—they are not thinkers. They have never thought that a handicap might be a challenge and not a defeat.

Like the sickly children who were dying off while Sandow was making himself the strongest man in the world, they do not realize that obstacles exist only to be overcome, and that every man may withdraw from the infinite reservoir power sufficient to his purpose. If his purpose be strong enough, he will draw heavily upon that reservoir of power, but to have a strong purpose he must have a motive no less strong.

In the handicaps of poor health or early poverty, there are motive to self-betterment, most powerful and most intense, to those who will see them as things to overcome and not as things to go down under.

The man who says, "I must succeed! I can succeed! I will succeed!" will go faster than the one who says, "Of course I will do well; look at the start I have!" And he who goes fastest goes farthest in the long run of life.

It was so with Sandow in the physical world. In the emotional world, consider the case of Handel, who was forbidden by his father to waste his time upon music and punished repeatedly because he could not obey. The urge to melody, harmony, rhythm, was too great to be suppressed—it was too powerful even for the natural inertia of flesh—and so the name Handel became synonymous with mighty organ music. "I must play! I can play! I will play!" said the boy Handel, and the whole world will listen to his music evermore.

Examples of Courageous Struggle

In the intellectual world, it is far harder to think of those who were born to fame than it is to find examples of courageous struggle through poverty to power. Samuel Johnson, Oliver Goldsmith, Benjamin Franklin, Horace Greeley—a few from the legion—each had to struggle against huge handicaps which, in each case, developed phenomenal power.

"IT'S A BROKEN CRANK CASE ARM MR. HUNT --- and if it happened a week ago it would mean laying up the car for a couple of days and a twenty dollar repair job. I have just received some Apco Crank Case Arms and I will get you out of it in a couple of hours and your bill will be less than two dollars."

LIST PRICE
\$1.50

CRANK CASE ARM FOR FORD CARS

The fastest selling and most essential repair part for Ford Cars on the market and one that makes money for the repairman by making satisfied customers.

CAST IRON AXLES

Are not used and for the same reason cast repair arms should be avoided. The Apco Arm is made from quarter inch Boiler Plate Steel, accurately drilled and finished in black enamel.

LOOK FOR THE NAME

There is only one genuine Apco Arm and if the name Apco is not stamped in the metal it is not an Apco arm. Do not accept imitations they cost you the same as the genuine.

SOLD BY JOBBERS IN 126 CITIES

APCO MANUFACTURING CO.
PROVIDENCE, R. I.

In the spiritual world, a single name may be enough—Lincoln.

From the dirt-floored, windowless log cabin in Gentryville he won his way into the hearts of the citizens of that international republic of all who love truth, honor, courage, kindness and devotion. Handicaps could not hinder him; even the loss of his loved ones made him only a firmer friend to all who mourned. Who shall say he has "no chance," while Lincoln looks down upon him from the lofty heights which he won and kept by sheer unaided merit?

Ambition, confidence, determination—these are the three qualities that lead infallibly to great success. Ambition that says, "I must!" Confidence that says, "I can!" Determination that says, "I will!!" And the last is the rarest of these.

There are millions who say, "I must!" there are thousands who say "I can!" but there are hundreds only who add, "I will!"

Without this third quality, this supreme quality of determination, ambition degenerates into mere petulant dissatisfaction, and confidence is nothing more than empty egotism.

Children say, "I must!" Fools boast, "I can!" None but the wise, courageous and strong dare to say, "I will!"

Centuries ago, the great Roman poet Virgil, describing a boat race, accounted for the fact that the weaker crew won, in ringing epigram, "They can who think they can!" It is true, because those who really think they can, will to do the thing—and it is done!

Through all the ages it has been true; it is true now; it is as true to you as it was to those ancient rowers, as it was to Eugene Sandow, Handel, Johnson, Goldsmith, Franklin, Greeley, Abraham Lincoln and to all the firm heroic souls who could not be contented except with the very best of which they knew themselves capable.

The handicaps of poverty, of poor health, of lack of opportunity were not handicaps to them but splendid spurs. What they have done, we can do. And what we can do, we will do, if we will.

This is the key to wealth, and the door to power, and the way to splendid service:

Ambition that says, "I must!" Confidence that says, "I can!" Determination that says, "I will!"

Now ambition is natural to all who have red blood in their veins, and confidence may be developed surely upon the granite base of special training for the work you want to do, but to get this training—to take the time and to do the work that will assure you of your own ability to make good—there is needed this third quality of determination.

This quality also may be developed. It is the product of practice, and it is neither needful

nor wise to start with great things. Sandow did not begin with hundred-pound dumb-bells. Handel practiced his scales before he played his oratorios. Lincoln learned law before he aspired to be a lawmaker. Just so is it the part of wisdom to develop determination by making small decisions to begin with and by holding to them.

When it comes to confidence some of us are a little weak. Fear lurks before every move toward progress and yet the success of the hundreds who have already passed the danger mark should clearly demonstrate that it only takes courage and determination to "go over the top." We can if we will.

With ambition to start on the right track; confidence to lead and encourage us along the way, and determination to keep us everlastingly at it, the success of our undertakings will be assured.

Let's begin overcoming obstacles today.

MERCHANT WHO HAS STOCK WILL DO THE BUSINESS

Editor **HARDWARE WORLD**:

In looking forward into 1920 we cannot but feel that the merchant, wholesale or retail, who is provided with a good stock of goods will be the merchant who does the business and who is able to serve his trade satisfactorily during the season.

The steel strike has rendered many items of the most staple character very scarce. This has further been complicated by the coal strike, which is not yet over, and it looks to us as if goods are going to be exceedingly scarce next year, even more so than they have been this year.

We see absolutely nothing in the immediate future to lead anyone to look for lower prices. There is an actual scarcity of goods with everyone clamoring for them, and until this is taken care of, and the demands of the country become more normal, we don't believe there is any chance for a great decline from present prices.

We think, therefore, that the merchant who buys early, who takes in his goods early, as early as he can get them, will profit by this course of action.

Council Bluffs, Ia. **EMPKIE-SHUGART-HILL CO.**

Patents have been secured by George T. Belknap, of Spokane, Wash., on a non-skid auto chain. The links are flat on the running surface, are U-shaped and are removable, so the chain can be made to fit any tire.

Some men cannot understand why they do not get ahead in the world when, as a matter of fact, they have worked as hard as ever they could to spoil their own chances. Stupid but true!

What are you planning to do for your own future, for its enlargement and safety? It is a short-sighted man indeed who works only for today and perhaps tomorrow. It was Abraham Lincoln who said, "May the vast future not have to lament that you neglected it."

The AirWay Electric Cleaner

Ready for
Immediate Delivery!

See What the Air-Way Handle Does for Her!

Would milady like to quickly remove the dirt from all those hard exasperating places?

From the corners, under radiators—from portieres, walls, window frames, mouldings, pictures, mattresses and tufted furniture?

Then she simply picks up her Air-Way and uses the handle just like the illustration. The Air-Way is so light that a child can carry and operate it.

A Real Sales Opportunity No Other Cleaner Like It!

On rugs, carpets and floors she uses the Air-Way just like any other cleaner—but on the hard out-of-the-ordinary places the handle does the whole job for her.

No waiting to put on cumbersome attachments—not a bit of bother. She just turns the indicator arrow toward the handle and in a few minutes the Air-Way has cleaned the house.

There is no other cleaner like the Air-Way—none which makes such an instantaneous appeal to the housewife. Distributors and dealers who handle the Air-Way get into big profits quickly because they can make a demonstration which *immediately* marks the Air-Way as delightfully different from every other cleaner—and decides the sale on the spot.

"NOT GOOD UNLESS SIGNED BY AN OFFICER OF THE COMPANY."

(Copyright by Elton J. Buckley)

Business people who like an anchor to windward at times when it is profitable to escape from their contracts, try to protect themselves in all sorts of ways—usually by introducing some clause in the contract or order blank—and the other business houses who are asked to do business with these concerns run up against these clauses all the time. A little discussion of one of them, which is quite common, may save somebody some trouble.

I refer to the clause which I have seen a hundred times in business contracts and orders, reading something like this: "This contract (or order) shall not be valid or in force unless it is signed by some officer of the ——— company."

As I say, I have seen this clause very many times, but I can count on the fingers of one hand the times I have seen it carried out by the actual signing. In most cases it is not in there to be actually carried out; it is in there to enable the concern whose officer is supposed to sign it, to say, if anything goes wrong and they wish to get out of the contract, "Why, this is not a valid order (or contract) because it wasn't signed by an officer of our company."

Sometimes this gets by, where nothing has been done on account of the contract. For instance, there was a case in which a retailer gave a salesman an order, signing on a blank which contained the above clause. The salesman sent it in to his house, but the goods did not come. The market advanced and the retailer tried to force the manufacturer to make delivery, but the latter escaped, pointing to the fact that he had never accepted the order, nor had he given the retailer any reason to believe he ever intended to accept it.

I remember another case, however, in which the court decided the other way. An automobile company thought it had a chance to sell a new car to a customer who had an old one which he expected to trade in. In its confidence that the sale would take place, it resold the old car it expected to get to A for \$1,175, A paying \$175 down. The order blank or contract which A signed contained the familiar clause that before it became a binding contract it must be signed by an officer or branch manager of the automobile company. This, however, was not done.

The customer didn't take the new car and therefore the resale of the old one fell through. A argued that the automobile company had made a valid agreement with him which it should keep or pay damages. The company refused to do more than return his \$175, and A sued it for damages for breach of contract. And he won. The automobile company said

there was no valid order or contract because it hadn't been signed by an officer or branch manager. On this point the court said:

That the presence of such a requirement as above stated (that to be valid it must be signed by officer or branch manager) in the draft of a contract, and the absence of compliance with it may have the effect of leaving the paper without any efficacy as a contract until the lacking signature is supplied, seems clear enough upon reason as well as upon authority. * * * But like many other provisions inserted for the protection or benefit of one of the parties to a bargain, it may be waived. * * * The fact that the company accepted the payment or deposit of \$175 and retained it until after August 1, is not open to serious question. Is the proper inference to be drawn that defendant (the automobile company) waived further and strict compliance with the mode of execution it had itself prescribed for its own protection and benefit, or is it not? * * * The result is that we have here a contract of sale and a failure on the part of the defendant to live up to it, entitling the plaintiff to damages.

So that A was not only entitled to his \$175 back, but also to damages for the automobile company's failure to deliver the car. The protective clause didn't work in this case, and it will never work, i. e., it will never allow the escape of one of the parties to a contract or order, if that party has done anything which indicates an intent to accept the order or the contract anyway. If he does that, he has waived the benefit of the clause. If nothing is done, the clause lets him out unless it is complied with. For illustration, if in such a case the seller acknowledged an order and asked for shipping directions, or gave some other indication of an intent to fill the order, it would in my judgment be too late after that to say, "I won't fill the order because it was never signed by an officer of the company."

It pays to "smile and push," even if you are worried or harrassed. But smile anyway, especially at home. It helps mightily to lubricate the machinery of everyday affairs.

Take time semi-frequently to plan new and likely-to-succeed ideas for your business. If you don't plan some such things and work your plans enthusiastically, you will get into a rut before you know it.

NONE FITS THE PLACE SO WELL AS HARDWARE WORLD

We take a number of trade papers for the institution, but we find that none of them fits the place occupied by the **HARDWARE WORLD**. The men employed in the clothing, shoes, groceries, hardware and lumber yard, all being on the subscription list, and from conversations overheard, we are sure that we are getting much information therefrom.

Self-Praise No Recommendation

"Empty vessels make the greatest sound"

THERE are people who do not realize how constantly they praise themselves and how amusing and, after awhile, tiresome this gets to be to their hearers.

A business friend of mine, who is really a clever conversationalist, is always the hero of his own tales and everything he does in speech, at least, redounds to his own glory. He is always surrounded by listeners, but one often wonders how he would feel if he could hear some of the remarks that these same people make, when they are by themselves, about him.

Perhaps he goes on the theory that "He that tooteth not his horn, the same shall not be tooted." He thinks that he might as well gain as much glory as he possibly can. Or, perhaps, it is just habit—come to think of it, I believe this is the explanation of his continual talk about himself and his own experiences. He found that he could please people by telling things that he had enjoyed and experienced, and before he knew it he had chosen "self" as a permanent subject of conversation.

Modesty is always more convincing than braggadocia, for one wins and the other prejudices, but beware of a pretended or mock modesty or humility. We have seen so much of this recently in politicians who claim to be "forward-looking," or to express themselves as having a "vision," or to "interpret thoughts," that it is even more disgusting and people soon tire of it.

Nothing disgusts business men more than a certain class of editors and writers who seek every opportunity to keep their names or photographs before their readers.

Well do I remember being in the presence of two writers. One was a man who had never succeeded in doing anything beyond the mere commonplace. The other had achieved fame and fortune, but the first man was so interested talking about himself that he didn't even discover who his companion was. The author, whose name is a household word, said afterwards, with a quizzical smile, "That man is great in his own estimation, isn't he?"

In place of impressing his companion, the egotist had only succeeded in making himself ridiculous.

There are times, to be sure, when it is necessary to tell what we are capable of doing. Or perhaps the better way is not to mention that, but rather what we have done. This is where an honest recommendation comes in. It gives the other fellow a chance to do the telling from a disinterested standpoint.

Most Worth-While People Say the Least

Some of the people who have done the biggest, and the most worth-while things in the world, say the least about it. It is noticeable

that the soldiers who went "over the top," or who were in the thick of things "Over there" do not have much to say. The real heroes prefer that others shall recount their deeds of bravery.

When all is said and done, it is one's actions in life which speak louder than words, so there is really not much necessity for us to waste time and breath in self-praise. Truly great people are the simple and the modest ones, while those who have achieved the least are much more likely to be ready to talk about it.

If we have service to sell, or goods, we are justified in bringing out the strong points of that service and goods, but the day is gone by when "lowest prices on earth," "wonderful this" and "marvelous that" are convincing.

Truth in advertising carries farther and is more permanent than absurd claims.

The man who attempts to build himself up by uttering derogatory things about other people never succeeds. The only man who enjoys self-praise is the one who is doing the praising. He usually feels that he is a big fellow—and so he is, in his own eyes.

"Empty vessels make the greatest sound," and the Good Book has it, "A fool's voice is known by a multitude of words." The same thing is expressed in the old proverb, "The deepest streams flow with the least noise."

WINCHESTER'S SPORTSMEN'S SERVICE DIVISION

Of much interest to the world of sport is the announcement by the Winchester Repeating Arms Company of the creation of a new service department for shooters, known as the Shooting Promotion Division. Through this department the Winchester Company expects to be of definite aid to followers of every branch of the sport of shooting.

Special attention will be given to gun clubs, their organization and maintenance. Representatives of this department are now available for the purpose of assisting groups of shooters in organizing, it is announced.

The service is also extended to existing rifle clubs and trapshooting clubs. The representatives will come to the locality where his services are desired and stay as long as he is needed. The department will also give information on all matters pertaining to the use and care of firearms, either through its representatives or by mail.

The department has been placed under the charge of J. Mowell Hawkins, a famous shooter and the winner of many championships. As popular and generally known as any shooter in America, Mr. Hawkins yet has one distinction which makes him the most interesting figure in the country to the followers of the fascinating sport of trapshooting. As far as known he has shot more strings of 100 straight clay pigeons than anybody else in the world—232 centuries in all.

Mr. Hawkins has been connected with the Winchester organization for 18 years. He was captain and manager of the famous Winchester Squad, which traveled in 1906 and 1907, establishing new records each year, and breaking the world's record for 500 targets up to 20,000.

STOP THE LEAKS THAT CUT YOUR PROFITS

How easy it is for us to cling to old ideas, methods and ways of doing things! It is the easiest thing in the world to close our eyes and ears to new plans and equipment for doing things because the change may require a little investment or alteration.

We argue to ourselves that the old way is comfortable; it has served us for, perhaps, many years. We have been able to make a living and perhaps accumulate a surplus profit, so why should we experiment? Trying to justify to ourselves a continuance of out-of-date methods is a great hindrance to progress and greater profits.

Our grandfathers used a scythe. It was of the finest steel and perhaps still has a very keen edge, but does that justify cutting wheat the old way? Should we refuse to use telephones—not ride on trains—burn candles and do other things in the old-fashioned way because our fathers or grandfathers did?

The old way of handling oil and gasoline in barrels, tin tanks and jigger pumps is a good example of the wasteful, inconvenient, unsanitary conditions that can be improved by the modern Self-measuring Pump, which, in addition to avoiding the above losses, saves time and labor. If we are going to win in business today, we must do our work without waste and with the least possible use of man power. We must stop the leaks that cut down our profit.

ADVERTISE SMALL LOTS FRANKLY

A recent bulletin of the Better Business Bureau of Detroit under the National Vigilance Committee of the Associated Advertising Clubs of the World, deprecates the following retail advertising practice:

In the course of our work we have learned that it is a frequent practice among buyers to have small quantities of a highly desirable article in a lot of merchandise, and in advertising this lot for sale mention the more desirable articles prominently in the advertisement without stating that there is a limited number to be sold.

This practice will destroy public confidence in a store because those purchasers who call at the store early on the day of the sale and select the most desirable varieties of a lot will be few compared with those who follow and are disappointed at not finding the desirable items as advertised. This should be avoided, and when advertising such a limited lot, this should be plainly stated, so as to eliminate any displeasure on the part of those who call later in the day and find that the items are exhausted.

Know your product, but don't forget human nature.

BROOM MANUFACTURERS' STATEMENT

The National Broom Manufacturers' Association is in accord with the wishes of the administration in endeavoring to help humanity to lower prices in general by keeping the nations' universal home cleaning necessity—the house broom—at the lowest price possible, commensurate with paying labor a good living wage and the price manufacturers are compelled to pay for raw materials.

Commenting on the situation for the association, H. R. Kelso, of the Lee Broom & Duster Co., writes:

"The constant references to higher prices is distasteful to the average citizen, yet it is not wise to deceive ourselves, but rather to accept conditions as they are and strive to make improvements.

There is one outstanding fact which is a reality and which governing bodies, both state and federal, are powerless to change, no matter how great their desire may be to lower prices.

"This fundamental fact is: So long as annual consumption of any commodity equals or exceeds annual production there can be little likelihood of any lower prices.

"As an illustration—the yield or production of broom corn for the past several years has been only sufficient to take care of the normal consumption of brooms, keeping the price on a higher level for both broom corn and brooms.

"When production increases to the extent that a surplus of broom corn is carried over, then we can logically expect some reaction in the way of price concessions. The same principle holds true on wheat, corn, leather, cotton, wool, etc. With a surplus of raw material, wearing apparel will cost less.

"This year's broom corn crop was over-estimated and now reports show the yield barely sufficient to keep manufacturers going. Naturally, under the circumstances, prices ruled high and broom manufacturers asking more for brooms are doing so through the necessity of circumstances over which they have no control."

DIMO-GRIT GRINDS STEEL TOOLS

A sharpening wheel which will stand up under severe usage, which will sharpen the hardest steel without drawing the temper, and which is suitable for all classes of work—that is the claim made for

DIMO-GRIT
THE WHEEL FOR STEEL

—manufactured by the Luther Grinder Manufacturing Co., Milwaukee, U. S. A.

Dimo-Grit is said to be the fastest sharpening substance known. It cuts twenty-five times as fast as a grindstone, yet it does not draw the temper from the tool. No water or oil is needed. It is made in many degrees of grit—to put an edge on rough farm implements as well as on the finest steel blades. It does not wear away the steel slowly, like a grindstone does, but cuts in quickly, giving the much-desired serrated edge which is most efficient.

Dimo-Grit wheels are controlled exclusively by the Luther Grinder Manufacturing Co., Milwaukee, U. S. A., manufacturers of the "Hummer" Grinder and other well-known repair tools.

NAIL FAMINE IN THE UNITED STATES

(By A. C. Bulofson)

Recognizing that the nail market in California was in a very bad condition; that stocks were very low; the consumption was large and growing, and that neither the jobbers nor the retailers realized conditions in the manufacturing districts, I concluded to make a trip and personally learn exact conditions.

I have just returned from a visit to all the nail and wire manufacturing centers, and also to the sheet mills—and I find the condition in both industries is greatly demoralized and most unsatisfactory. Nearly all the nail mills in the United States are closed in their finishing departments. The nail makers who went on a strike are still out, and they have scattered to the four winds—and when the mills start operating they will in most cases have to employ new men and teach them the business.

Manufacturers tell me that it will take at least six months for them to return to normal conditions and clean up the orders now on their books, and so far as I could learn no manufacturer is taking any orders.

I found in Boston the nails were selling from \$6.00 to \$8.00 base—or any other price that would obtain a supply. All orders were being cut down to approximately five per cent.

I found the same conditions prevailing in Pittsburgh, Cleveland, Buffalo and Chicago. In a number of cities I saw where American jobbers had sent motor-trucks into Canada trying to pick up twenty to fifty kegs of nails at any price that Canadian manufacturers were pleased to charge.

All the Canadian manufacturers are booked ahead for many months, and their prices are very, very much higher than they are in the United States—and their extras are much higher than the American standards.

While the official price of nails in San Francisco is about \$5.50 base, I know where California merchants have offered and even paid as high as \$8.00 base for a very poor carload assortment—small nails being unobtainable.

Talking with many manufacturers, I have come to the conclusion that when manufacturing conditions become normal, there will probably be a higher base price, and I should not be at all surprised to find a new list of extras adopted by the American and Canadian manufacturers, who have found that the present extras on small sizes pay an actual loss.

The foregoing is not an exaggeration, therefore when retailers and consumers may be called upon to pay \$8.00 to \$10.00 a keg for nails, they should not accuse the seller of being a profiteer, because these are extraordinary times, and the seller is not making as satisfactory a profit under existing conditions as he did during normal times.

Mr. Hardware Dealer:

Your Automobile Accessory stock is not complete without these lights; thousands of automobiles are now owned by farmers and residents of small towns, in which there are no repair men capable of renewing curtain windows. With our

Improved Pioneer Automobile Curtain Lights

you can make many happy minds and create a lot of new business in your Accessory department, as these Curtain Lights are designed for those who take a genuine pride in the finished appearance of their car; their symmetry making them distinctive and unusually attractive.

So constructed that they will not give away, yet they are extremely light and require no extra top lining.

A selected grade of 3/16 polished plate-glass is used and each glass is carefully beveled to produce edges of uniform thickness and a bevel of uniform width.

Very easily put in and there to stay; all studs being securely fastened in the outer frame and so placed they align themselves perfectly with the holes in the back frame.

Fabric and glass are rigidly held in place by means of the snug fitting design of the two rings, which clamp the fabric with uniform pressure over all, and to prevent all rattling or breaking. Fabric so clamped where it comes in contact with the glass without being scored or cut by sharp edges. And this uniform clamping also makes the light absolutely leak proof.

And the above illustration shows the final operation of removing the narrow edge of fabric which extends inside the frame when the light is mounted. Very simple; with a sharp knife this fabric is removed quickly, neatly and accurately by using the edge of the frame as a guide in cutting.

CORTLAND, NEW YORK

ARE YOU JUST GOING TO?

He was just going to help a neighbor when he died.

He was just going to pay a note when it went to protest.

He meant to insure his house, but it burned before he got around to it.

He was just going to quit work awhile and take a vacation when nervous prostration came.

He was just going to reduce his debt when his creditors "shut down" on him.

He was just going to stop drinking and dissipating when his health became wrecked.

He was just going to introduce a better system into his business when it went to smash.

He was just going to provide proper protection for his wife and family when his fortune was swept away.

He was just going to call on a customer to close a deal when he found his competitor got there first and secured the order.

Stop complaining about being rushed and worked to death, and examine your daily, yes, weekly schedule, to discover if you are not frittering away time doing something that some other person, machine, or service could do as well if not better, and much cheaper than for you to spend time and effort puttering with.

ACCESSORY HAMMOCK FOR BABY'S RIDE

An agent in North Dakota has found a solution for a problem that has perplexed many a mother—what to do with the baby when the family is taking an automobile ride. He describes his apparatus as follows:

"Take two pieces of three-eighth inch rope, each long enough to reach from one top bow around back of the seat to the other. Into these splice two short pieces to make a rectangle about a foot wide and nearly as long as the car body is wide. Leave ends of rope at the four corners to tie to the four bows on the top. Over this rectangle fit a denim basket about two feet long. This will make a very satisfactory hammock and one that can be used at any time of the year. The baby carried in it will be happier than in the mother's lap and the mother will have a pleasant trip."

Never laugh at, joke or "kid" a small man. He'll get peeved if you do! Pick out a genuinely big man and you can have clean, healthy fun with him—because he is big.

The stock you carry on your books, sold but not paid for, is bringing you no profit. Turn it into cash as fast as you can.

This is the "GOLD MEDAL" Cot Advertised in National Magazines

"The Cot of Many Uses"

The Name "GOLD MEDAL"

(Trade Mark Reg.
U. S. Pat. Off.)

has, for years, stood for the best in Folding Furniture. A comfortable and convenient bed in Camp—an "extra" bed for the Home for emergencies—light, strong, and, when folded, easily carried or stored away in a closet.

This year we shall tell the story of this Cot—our Folding Chairs, Tables, etc.—to over six and a quarter million readers through our National Advertising. These readers will be directed to your store for "Gold Medal" Folding Furniture, sold only through Dealers and Jobbers.

There's always a ready sale for "Gold Medal"—this year National Advertising will make the demand greater than ever.

We can make deliveries—if you'll get your order in now. Send for New Catalog.

WINCHESTER

What These Great Factors in 1920 Winchester Sales Will Do for You

Quality—Prestige—Serviceability—Completeness of Line. These are the four great factors which lead you to stock Winchester Guns and Ammunition. From the ordinary, every-day standpoint, they mean quick, sure sales—rapid stock turnovers—satisfied customers—sure profits. You can depend upon them for this.

YOU know — every gun and ammunition jobber and dealer knows — Winchester quality never varies. It is the same today as it was half a century ago. The same for every shotgun or rifle. The same for every shell or cartridge. Always the standard of excellence.

You know the name Winchester has been a part of our language ever since 1866, when the new Winchester Repeating Rifle took the world by storm. You don't have to tell customers what Winchester stands for—they know and respect the name as well as you do.

You know Winchester serviceability—how Winchester Shotguns and Rifles stand up under the hardest use, defy abuse, outshoot competition—how Winchester Ammunition can also be depended upon.

You know that the Winchester line is the most extensive in the world—that it includes every kind of gun that there is a need for in your sales territory, and the right ammunition. More than that—you know that Winchester constantly develops new gun and ammunition models and types to meet new demands—is always in the lead.

But these four outstanding elements of

Winchester salability have another side—not so familiar, yet nearly as important to you. Each of them is in itself a powerful, living unit of Winchester *energy*, constantly exerting itself in your sales territory to increase your gun and ammunition business.

Together they form a tremendous sales influence, second only to the power of Winchester Progress.

During this new year of 1920, Winchester quality, prestige, serviceability, and completeness of line, will therefore insure you (1), maximum sales to your existing market, and (2),

greater opportunities than ever for profitably sharing in the great volume of entirely new gun and ammunition business which Winchester Progress is creating.

You also know that Winchester leads in *promoting* new sales of guns and ammunition—in creating new demands for them. And in your territory you have found that, due to this, Winchester Guns and Ammunition are each year forging ahead as the *Big Sellers* in your stock.

You have seen a section of the remarkably successful development of the Winchester Junior Rifle Corps. And what you have seen

has had the usual Winchester characteristics—the soundness and stability which mark every new Winchester undertaking.

The Winchester Junior Rifle Corps—endorsed by the highest officials of the Army and the Navy—has taken a similar permanent vigorous hold upon the whole country. And through it, Winchester is developing nationally a great new generation of rifle-users.

During 1920, the development of .22 caliber rifle shooting through this organization will be greater than ever. The preparatory work is now done, the whole organization running smoothly, the W. J. R. C. program being adopted by schools everywhere, not to mention rapid increase in Local Units of boys not otherwise organized.

For another thing, Winchester has now commenced a similar development in junior trapshooting, to promote sales of the Winchester Junior Trapshooting Outfits. A brisk demand has already been created—the Big Boom is coming.

Remember that these new features in sales promotion, which are stimulating such intense interest in guns and shooting among boys and girls, do more than multiply direct sales of Winchester .22 caliber rifles and ammunition and Winchester .410 bore shotguns and shells. They also constantly graduate young shooters into lifelong lovers of the sport.

Winchester is constantly doing other interesting and aggressive work of equal and even greater importance, to help sell Winchester Guns and Ammunition for the dealers.

In trapshooting promotion, Winchester maintains a special trapshooting department—the most active and progressive organization of the kind in the whole world—which for 1920 will be much more active than ever before.

Small-bore rifle shooting for adults is also being aggressively developed. Here is another field of much promise for the dealer, in which

Winchester leads both in equipment manufactured and in *promotion work being done*.

The Winchester free service to hunters desiring information—conducted by experts of national reputation and widest experience—is still another valuable outside-the-store aid, in the interest stimulated among retail customers.

Large-space magazine, newspaper, and outdoor advertising will be employed as usual, promoting direct sales for the dealer.

Be prepared to get your share of the big increase in demand for Winchester Guns and Ammunition.

Don't wait to see what happens—realize *now* the necessity of having an adequate supply of Winchester goods to take full advantage of your opportunities. Get your order in at once.

Pacific Coast Distributors

The Western Agencies Company
285 Minna Street, San Francisco, California

SUBSTITUTE FOR FELT IN SHOW CASES

In up-to-date hardware stores, the custom is to display hardware on felt covered panels back of glass. The stock of the items displayed is in shelves behind the panels. The customer sees the article he wants through the glass and the clerk can get it out of stock in a minute.

Felt for covering display panels is extremely high priced and it will fade in service so that if it is desired to change around the articles displayed on panels, the parts of these articles shade from the light will be noticeably different in shade and show clearly the outlines of the original display.

A leather substitute which is much cheaper is now used to replace this felt. It is obtainable in dark green or other suitable colors. It does not fade. In addition, it is dust-proof and washable. It serves every purpose quite as well and better than felt. A medium heavy weight is recommended.

"MEK DE MILLION" — A STUDY IN HUMAN NATURE

"Jimmy" was blacking the schoolmaster's boots. The schoolmaster wanted to work. He tried his best to do so. But "Jimmie" was in a loquacious mood—and his mind was running along business lines. It may have been the hum of activity in the office that started him to soliloquizing thus:

"Advertising good business. Mek lots money. Something new all de tam. De man that git new idea and push him—advertise him, de man that mek de million. Yes, sire, he mek de million. Yes, sir, he mek de million ef he knows peoples. But he got know peoples right. He no can talk same way to all. Now me, I no tink like you. I no understand de sam. Man sell me something he must no talk to me like he talk to you. Ef he do I no buy. To you he must talk beeg, to me —no too big word.

"And he must mek it de picture. I lak de picture, my wife she lak de picture, my gal she lak de picture. Everybody lak de picture, you no tink? Advertising man he mek it de picture, so can see how de stuff he look, then he talk it so you can understand, so me I can understand, so de whole world can understand, then he sell it de goods fast—he make it de money lak 'ell. He git reech. Yes, I tink advertising be good business."

—Printers' Ink.

SUPPLY AND DEMAND

The trade who have been keeping their ears close to the ground in the hope of hearing some rumblings of general price declines in paint and varnish products now acknowledge their disappointment.

No satisfying indications of lower price tendencies that might ripen into actual declines are apparent, as yet, in this field, and the manufacturers generally are buying the materials for spring stock production upon the present basis. It is quite conceivable that some prices will shortly advance, for in many lines of raw materials the producers are sold far ahead and supplies are so hard to secure that spot deliveries are almost unknown.

Paint and varnish manufacturers also were never so busy at this time of year and are sorely pressed to meet the demands of the government, the furniture and automobile and other industries, as well as of the jobbers and dealers.

Evidently the whole world wants paint and varnish—and it wants it now.

Never misrepresent goods. If they are of second quality, say so. Do not think that you can persuade other people to buy unless you yourself are convinced that what you are offering is the best which can be had for the money.

REORGANIZATION OF WARNER-PATTERSON CO.

Hardware merchants, as well as every man who shaves himself, will be interested in learning that the Warner-Patterson, Perry Company has been organized to take over the interests of the Warner-Patterson Company, manufacturers of the Warner shaving brush. The sales and executive offices of the new corporation are located at 1024 S. Wabash Avenue, Chicago.

While thousands of Warner brushes are already in the hands of users, there has been considerable difficulty in the past year in making deliveries, but now that the factories are operating on a peace time basis, this trouble has been eliminated and quantity shipments are being made daily. Many improvements have been made in the brush and the fact that cartridges to fit the brush, containing all the different kinds of shaving cream, can now be secured is a decided advantage.

The brush knot is of the highest grade and the bristles are set in vulcanized rubber. This knot is absolutely guaranteed by the makers, the Rubberset Company. The case is heavily nickeled and the telescope handle completely encloses the brush, so that it may be thrown in a traveling bag with no danger of soiling the contents.

The flow of the shaving cream is regulated by a thumb cap at the bottom of the handle and the cream is forced up through the knot to the bend of the bristles through a flexible rubber tube. In this manner the cream is fed directly to the heart of the brush and, as the flow is automatically controlled, just enough cream is released, thereby eliminating waste and prolonging the life of the cartridge.

The retail price of the Warner-Patterson-Perry brush, with a tube of your favorite cream, packed in a neat package, is \$5.00. The low price and general utility of the brush would seem to forecast a tremendous Christmas business.

DON'T THEY EVER WEAR OUT?

That's what they ask us about OWEN tires after using them and when they come back for more. If you were selling Owen Tires and your customers came in and said to you, "Don't they ever wear out?" you would begin to sit up and take notice. Yet that is exactly the question that has been put to us, not once, but several times, from users who have gotten more wear out of them than they ever got out of any tire before. It's better than having them come in and ask for an adjustment, now isn't it? That's the reason the mileage guarantee has been increased from 8 to 10 thousand miles. Just try a few yourself, as we stand right back of our guarantee and you can't get hurt.

OUR WRENCHES HAVE SOLD FOR 10 YEARS WITHOUT CHANGE OF CONSTRUCTION

SELLING TWO CASINGS INSTEAD OF JUST ONE

Almost every dealer knows that when a new tire is put on a car opposite an old one, the driving and braking strains are not equal. But few realize that they can use that fact as a mighty good argument to sell tires.

Suppose a dealer has just sold a man a new casing. He expects to put it on the rear opposite one which is half worn out. Don't let him do that. It's just as easy—if the dealer goes at it right—to persuade him to put two new tires in service together. And at the same time he will be doing a service to his customer.

The dealer should show him that if he uses a new casing opposite an old one, the new tire gets nearly all the traction. It takes practically all the strain when the clutch is let in. It does the same when the brakes are applied. Every tire man knows what happens when brakes are not equalized—one tire wears down much more rapidly than the other. About the same thing happens when traction is not equalized—that is, when one tire is worn and the other is new.

Call those facts to the customer's attention. Stand the new tire up beside the old one on his car and show him that it is a half inch higher or more. Then tell him that if he's looking for service and wants his tires to have a chance to give it, he'll put on two new casings and let them wear down together. In the meantime he can carry his worn tire as a spare.

It's a sound argument. And it will sound so reasonable to the customer that he can hardly help but be convinced. That's what those dealers say who are already using this method of selling two tires instead of one.

Try it on the next customer—and ring up a bigger sale on the cash register.

THOSE WHO "DELIVER THE GOODS" CAN PAY EXCESS PROFITS TAX

Editor **HARDWARE WORLD**:

The law of supply and demand is still in force. Acting under this law, it seems to us that the merchants who have the foresight and the resources to place orders ahead of actual requirements and take in and stock this merchandise, are the ones who are going to be able to "deliver the goods," and, as a result, pay a larger excess profits tax.

THE ZINKE COMPANY,
Chicago. L. P. Zinke.

NEW SHOW CASE PLANT

Work has been commenced on a new plant for the Duluth Show Case Co., Duluth, Minn., to be completed about the first of May. The plans embrace a three-story building 75x350 feet with adjacent storage space, smaller outlying buildings for the boiler, engine room and garage and two dry kilns. All modern appliances and conveniences will be installed in the model factory, as well as full equipment of new machinery of the most improved type for the building of sectional hardware, show cases, counters and general store furniture.

COLEMAN KEEPS CONSTRUCTION GOING ON

For the fourth time in the space of two years the Coleman Lamp Company, of Wichita, Kansas, has broken ground for construction purposes. Right now the Coleman plant is four times as big as it was two years ago. This is a four-fold increase in production space, made necessary and accomplished because of the wide and rapidly increasing demand for Coleman lamps, lanterns and lighting systems.

Coleman products now enjoy an international reputation. They are sold and used all over the world. Foreign orders are pouring in from all quarters. The export department is continually calling for a larger share of the factory's output.

All this in addition to a steadily growing domestic trade, which, even before the development of extensive foreign markets, was quite a considerable factor in the necessity for new production space and equipment.

Five branch offices—Dallas, Los Angeles, Toledo, St. Paul and Chicago—are now engaged in the marketing of merchandise carrying the Coleman label.

Four hundred jobbers are now handling the wholesale distribution of Coleman products in this country. More than 15,000 merchants are retailing Coleman goods in every nook and corner of the land. In some states 98% of the available and desired dealer distribution has been secured and is active, especially in the resale of Coleman lamps and lanterns.

ATLAS SHEARS A SHARP BUY

Atlas of old was thought to have borne the world on his shoulders, but the Atlas Shear Co. of today is satisfied to keep the world on edge, or, perhaps better, to keep its edges on the world. At its factory at Bridgeport, Conn., the Atlas Shear Co. manufactures scissors and shears made especially from selected cutting materials, with extremely hard, sharp and enduring cutting edges. During the last six months the output of the factory has greatly increased so that the firm is now in a position to give service to jobbing trade orders, however large.

Atlas catalog No. 19 is now on the press and will be ready for distribution in a few weeks. Dealers interested in increasing their sales will do well to add the famous Atlas Shears and Scissors to their stock, as the demand for Atlas Shears and Scissors increases very materially every year. The company will, of course, be pleased to send this catalog to any dealer or jobber not already familiar with the Atlas line.

1919 A BANNER YEAR FOR HIGH SCORES

The year now drawing to a close has seen a shooting season that has produced some wonderful records and scores by American sportsmen, and a clean hit for Hercules Powder, according to the company's records.

Twenty-one amateur state champions, shooting E. C. and "Infallible" powders, won their local shooting crowns with a combined percentage of just over 96 per cent. The professional championship of America was won with Hercules powder with score of 200 straight from 18 yards.

Rifle shots were not to be left behind. The A. E. F. rifle team won the inter-allied rifle matches at Le Mans, France, last June. All shot Hercules powder in making the remarkable score of 2651 out of 3000 points, just 236 points ahead of their closest competitor.

The Wimbledon Cup Match, America's long range shooting classic, which is generally regarded as the individual long range rifle championship match, was won with the same combination that won for America at Le Mans.

A Real Western Opportunity

**FOLDING
STEEL STOOL**

WHenever an extra seat is needed—in the car or around a camp fire—this strong, durable and comfortable stool is ideal. Folds flat into a space of 7½x10 inches. All steel frame, heavy canvas seat and weighs only two pounds.

NEW PARKER SUPPLY COMPANY MANAGER

With this item we show in very small proportion the likeness of George S. Moran, the new treasurer and general manager of the Parker Supply Co. The quiet but firm way he has taken hold of things shows the sort of stuff that is in Mr. Moran and the way he may be expected to handle the large interests of these makers of sash chains, expansion bolts, metal punches and sheet metal screws.

Before the uncertain days of 1916 he was in the sales organization of the Ingersoll-Rand Co., and when the world began to go to war he was sent down to Texas, on the Mexican border, in the military service, where he spent eleven months. After this he came north, where he became an officer in the aviation service and acted as pilot for eighteen months overseas.

TOPPING MFG. CO. ORGANIZED

Crowning the eighteen years of progress and development of the Safety Door Hanger Co., announcement comes from the officers of the company that it has now been reorganized as the Topping Mfg. Co., at Ashland, Ohio.

W. V. B. Topping has always conducted the business of the Safety Door Hanger Co. and is now made president of the new company. The vice-president is B. B. Leed and the Secretary and Treasurer is George M. Bear. Mr. Leeds recently left Russell & Erwin, after thirty-two and a half years of service there, and will handle the western trade for the Topping Mfg. Co. Their new catalog is now on the press, and will be ready for distribution soon after the first of the year.

They are the sole manufacturers of Red Rib Door Hangers and Track, also of Storm King, World's Best, Wizzard Safety, U. S. Standard Hangers and garage hardware.

COLEMAN COMPANY OPENS LOS ANGELES BRANCH

The Coleman Lamp Company, of Wichita, Kansas, has opened another sales and distributing branch—this time at 120 South Los Angeles street, Los Angeles, California. This Pacific Coast representation was made through the purchase, by the Coleman interests of the Cole Light and Sales Company. The demand for Coleman products in the Southwestern Coast territory is both wide and strong.

The states included in the Los Angeles sales district are California, Arizona and Nevada. All business from these states is handled under the direction of Mr. F. Cole, formerly head of the company which bore his name. Other branches of the Coleman Company are already established at Chicago, Dallas, Toledo and St. Paul.

The exhibit of the Black & Decker Mfg. Co., at the November jobbers' convention in Chicago, included their complete line of Lectroflater Electric Air Compressors, Portable Electric Drills and Electric Valve Grinders.

MARSHALL-WELLS BUYS TOWN

Seldom do we hear of so comprehensive a housing movement by any manufacturer as that recently announced by the Marshall-Wells Hardware Co., Duluth, Minn. The company has recently purchased 1000 houses at Barksdale, the Du Pont powder village, near Washburn, Wis., which was completed just as the armistice was signed. These structures will be moved 125 miles to Duluth, either by rail or by water, and erected for the employees of the Marshall-Wells Hardware Co. at its great factory.

This announcement is indicative of the business enterprise and social consideration of the Marshall-Wells Hardware Co.

SEVEN STORIES IN NEW WHITON BUILDING

The Whiton Hardware Co., Seattle, Wash., is proceeding to build the first two stores of what will eventually be a new seven-story building. This new home will be on First Avenue South, near Atlantic Street, Seattle, and will be a masonry structure 120x150 feet. Plans for the first floor call for general offices and sales rooms.

SEPARATE WHOLESALE AND RETAIL

Announcement is made to the trade that after February 1, 1920, the wholesale and retail department of Krakauer, Zork & Moye, at El Paso, Texas, will be separated. The increase of the business and the scope of the company has made this step necessary. The wholesale department will continue in charge of W. C. Hepburn at the old location. The retail department will be in charge of a new manager at a new location, to be announced later.

BLACK & DECKER AT SEATTLE

The Black & Decker Manufacturing Company has opened an office at 201 Maynard Building, Seattle, Wash., in charge of A. E. Nordwall, who is well known on the Pacific Coast. He will have charge of the distribution of Black & Decker products in the state of Washington, working under the direction of the main Pacific Coast office, 918 Hearst building, San Francisco, Calif.

NEW SCALE CATALOG

The Pelouze Manufacturing Co., Chicago, have just issued a new 22-page catalog, itemizing and illustrating their scales and electrical goods, all types of family, counter and other commercial scales are produced by the company, and included in its standard lines. Among the electrical devices illustrated are flat irons, posters, curling irons, radiators, chafing dishes and other cooking and heating novelties.

MAKES FORDS START EASY

A new Gas Generator, which heats the manifold, vaporizes the gas and makes instant ignition possible has been invented by the Bear Mfg. Co., 121 Bear Bldg., Rock Island, Ill. This simple and inexpensive device does away with hot water makeshifts, etc., and gives you a "ready to start" motor in the coldest weather. It also saves 10 cents a gallon on gasoline because with it you can use the cheapest gasoline all winter. If you want to try this great trouble and money saver send them \$1.50 and they will send you one of these remarkable devices postpaid under a guarantee of satisfaction or money back. Write them today. Dealers wanted.

**CLOCK TURNS OUT WINDOW LIGHTS**

A window display that works only during the hours of daylight is performing only part of its duty. It ought to be working as long as people are on the streets. But in order to do this, it is necessary to have some arrangement to turn off the window lights at night.

The illustration shows a simple plan used by a merchant in Pennsylvania. He removed the alarm key from an alarm-clock and substituted a grooved spool. This was attached by means of a stout cord to the switch controlling the window lights. The alarm can be set to any time desired and the switch, which is adjusted rather loosely, will automatically be pulled by the clock at that hour.

This arrangement is simple and inexpensive and extends the working time of the windows by several hours. If your window space is worth five dollars a day, the use of this little plan will make it worth seven or eight dollars. And the only cost attached to it is the purchase of a fairly good alarm-clock.

BEWARE OF HIM

A Mr. Charles Wilkens, claiming to be a relative of Mr. L. G. McDonald, sales manager of the American Wire Fabrics Company of Chicago, and also a brother of George W. Wilkens, whom he states is connected with the Clinton, Iowa, factory of the American Wire Fabrics Company, is traveling on the Pacific Coast borrowing money on the strength of the fact that he is related to Mr. McDonald and Mr. Wilkens.

Mr. McDonald desires the trade to understand that this man is no relation to him and that they have no one connected with their Clinton, Iowa, factory by the name of Mr. George Wilkens.

He characterizes him as a crook, whom he says should be arrested for obtaining money under false pretenses.

HERCULES SOLDER IN IOWA

Hercules Cold Solder, which has hitherto been manufactured by the Freiden Mfg. Co., of San Diego, Cal., will now be produced at Council Bluffs, Iowa, through the organization of the Hercules Products Co. B. W. Freiden, president of the former company, has moved his headquarters and factory to the Iowa location, and is president of the new company. The many friends of Hercules Cold Solder throughout the western trade will be glad to know of the enlargement in the plans of the company, and they be assured of the same service and cooperation which they have enjoyed in the past from the Freiden Mfg. Co.

J. B. Heyburn has opened the Heyburn Hardware Co., Bend, Oregon. Mr. Heyburn was formerly with the Skuse Hardware Co.

Farmers and Owners of Cars are Prospects

YOU who have in the past handled vehicles and wagons and have lost that profitable trade to the Motor Vehicle, are in a position to get the old volume and more back in handling "Utility Trailers" and without the necessity of giving service or having an expensive service department as is required where you sell motorized vehicles.

Every farmer in your community is a prospect for a Utility Trailer of some sort. Every motor truck running over your highways is necessarily a prospect for a Utility Trailer, if he is to compete with others using them, they bring truck operating cost down to a point where the profits are satisfactory, and truck operating brought out of the Red Ink.

Utility Trailers are motorless auxiliaries to the truck or passenger automobile, bringing you a clean profit when sold and a profit that is yours, not to be later paid out in shop costs of free service as in motorized vehicles.

We have some good territory open, write us for our proposition to dealers.

The New Winchester .410 sport gun

The sturdy Winchester Midget handtrap

SHOOTING KIT GETS BOY TRADE

There is no possession the boy prizes more like a human friend than his rifle. There are few things that come to him that he cherishes so much or gives so much care to. To be a real shooter and to have a real shooter's equipment is a primal boy instinct.

A shooting outfit, complete for range and target work, has just appeared that seems to meet this instinct squarely. It is based on the experience of what young shooters want and need, gained from the work of the Winchester Junior Rifle Corps, the organization that is training boys and girls in the safe enjoyment of shooting sport. This Winchester Junior Rifle Corps Range Kit will appeal powerfully to the young people because it gives them just what every shooter needs in a compact form that awakens that pride of ownership instinct in full measure.

For these W. J. R. C. Range Kits are complete

shooting equipments assembled in an attractive, easy to handle carrying case. They enable the owner to go right out to range or shooting gallery and start in enjoying himself without giving any further thought to his supplies. Each kit contains a Winchester .22 caliber rifle, either the 02 or 04 model, according to the kit selected; 200 of the Winchester .22 short Lesmok cartridges; 50 official Winchester Junior Rifle Corps targets; a khaki belt and cartridge pouch, that will make a hit with the boys at once; a khaki gun carrying case and the cleaning essentials to care properly for the rifle.

These kits offer a splendid way to introduce those who have never shot before to the genuine fun of rifle shooting. Nearly every youngster wants a rifle. But, in most cases, there is some stimulus needed to turn these possible customers into actual buyers. These range kits, with their complete standard equipment for shooting, in attractive compact arrangement will give dealers a strong stimulus to help develop this big field of possible sales.

Manager E. Hawthorne of the Raymond Hardware Co., Raymond, Wash., recently attracted attention and interest in that locality by displaying Indian relics of the Willapa Harbor natives.

KLICK HEADS NEW TUBING CO.

Information has come to this office that Earl Klick, for several years successful sales manager for the Chicago Tubing and Braiding Co., Chicago, has resigned his position and organized the Klick Tubing & Braiding Co., with factory at 328 North Randolph Street, Philadelphia, where a full line of flexible metal and Braided Rubber Tubing may be obtained, as well as gasoline hose and air hose.

The company has been started with sound financial backing, and will begin business with orders for over \$100,000 from those members of the trade who already know Mr. Klick's enterprise and trustworthiness as a business agent.

STARTS FORD IN THREE MINUTES

It is claimed for Bear Gas Generators and Manifold Heaters that no matter how cold the nights or how long the stand, a Ford will start in two or three minutes with this simple appliance attached. The gas coming from the carburetor is heated and vaporizes, thus making ignition easy. It also saves 10c per gallon on gas bills, according to the manufacturers. The device retails at only \$1.50 and is manufactured by the Bear Mfg. Co., Rock Island, Ill.

A DOUBLE CUT PRUNER

That it will cut from both sides of the limb and not bruise the bark is the claim made for the pruning shears manufactured by the Rhodes Mfg. Co., Grand Rapids, Mich.

Pruning shears generally have but one cutting edge, and the dull edge bruises and peels the bark from the limb. Overlapping points prevent the shear blades from ever meeting and cutting each other after the points pass. The shear blades are forged from tool steel and are carefully ground and tempered. These shears are in use throughout the world, and are said to be giving perfect satisfaction in all kinds of pruning.

It is claimed by the makers that once a dealer handles this line he will never under any consideration, go back to the old style single cut shears.

The hardware store of G. C. Comstock, at Williams, Calif., was totally destroyed by fire.

WIZARD LANTERNS NOW D-LITE

The R. E. Dietz Company has announced a change of name for their "Cold Blast" Lanterns, which have been known for some years past under the names No. 2 Wizard and No. 2 Large Fount Wizard. Hereafter these will be No. 2 D-Lite and No. 2 Large Fount D-Lite. The explained purpose of this change is to do away with every possibility of further confusion of the somewhat similar names, No. 2 Wizard and No. 2 Blizzard, under which two different sayles of "Cold Blast" Lanterns have been distributed to the trade. The small Dietz Lantern of the Wizard type, known as "Little Wizard," will retain its present name, as it has no confusing counterpart in point of size in the Blizzard series.

A GLANCE AT GLAZE FOR LANSING

The editor of the *HARDWARE WORLD* is rather in a quandry whether he should recommend his readers to glance at Glaze or to gaze at Glaze, and whether in the process he will not rather confuse his readers altogether by this tongue-twisting procedure.

At any rate here is Alden E. Glaze, one of the master pinions among the many Lansing wheels, and we are indeed proud to publish this likeness of Mr. Glaze, for although it hardly does him justice, still it embellishes our page and provides some impression of the geniality that radiates from Mr. Glaze's presence. For three years he has been with Lansing & Co. at its far western branch, for a time in the office, and now one of the principal outside men of the company.

During the war he was chief petty officer in the United States Navy, and in charge of the buying of all paints and oils for the Pacific fleet at the Mare Island Navy Yards. True proportioned and well rounded is Mr. Glaze in personality and character as well as figure, and in all of these qualities he simply typifies the line and the house which he represents.

SWAN & FINCH ACQUIRE CATARACT REFINING INTERESTS

Announcement is made of the purchase by Swan & Finch Company of the Cataract Refining & Mfg. Co., of Buffalo.

The Cataract Company operates large lubricant plants at Buffalo and Chicago, and maintains branch offices and warehouses in eight of the principal cities in this country besides four in England, Scotland and Canada. The increased manufacturing and marketing facilities afforded by these will give to the Swan & Finch Company a pre-eminent place in the lubricant field.

Swan & Finch Company, since 1853, has been one of the leading oil and grease producers of the country. It is the world's largest refiner of Menhaden Fish Oil. Lubricating oils of all kinds, greases in great variety, semi-liquid oils, and also the numerous vegetable oils are among its products.

The Hollow Ware Sales Co. has succeeded the Indiana Hollow Ware Co. at Jeffersonville, Ind., producing a general line of kitchen hollow ware and stove accessories.

SECRETARY ROBERTS SERIOUSLY ILL

We are advised by Mr. George H. Dietz that owing to the serious illness of Nathan Roberts, of the Nebraska Retail Hardware Association, Mr. Dietz has been made secretary.

Mr. Dietz writes most enthusiastically of their coming convention, saying that all of the space has been sold and they are looking forward to the best meeting that they have ever had.

The many friends of Secretary Roberts will sincerely hope that his illness will be of short duration and he soon will be restored to his full health and strength.

HYGRADE ADVERTISING HELPS

Supplementing the excellence of their products, the Hygrade Lamp Co., Salem, Mass., offer an added inducement to the hardware and electrical dealer in their distinctive advertising service.

Their new prospectus of mats and electros for newspaper advertisement has just been distributed among Hygrade dealers, and contains not only the cuts themselves, but suggestive advertisements using the same.

Window trims are included in the advertising scheme of the company, and with this in his hands there is no excuse for Hygrade dealers failing to put the products before their trade.

With this step accomplished, the lamp itself is bound to hold the custom and bring repeat orders, according to the company's distribution philosophy.

ALLITH-PROUTY'S NEW CATALOG

The trade is generally agreed that the Allith-Prouty catalog No. 90, just off the press, is one of the finest of its kind ever issued.

Every item in the line is described in detail and

Three Allith-Prouty Wagon Bodies

carefully illustrated in such a manner that it appears forcefully and intelligently.

The dealer or the jobber who has this book in his possession can order Allith-Prouty products with understanding and with safety, and buyers should rejoice in this up-to-date salesman at their right hand continually. It should be a reference help, valuable at the start, and of interest for a great length of time.

Copies of the catalog will be forwarded promptly upon request by the company from its home office at Danville, Ill.

BISSELL'S SALES HELPS

The accompanying illustration graphically shows the sort of sales helps the Bissell Carpet Sweeper Co., Grand Rapids, Mich., is providing for its dealers.

These display cards, window trims and suggestive newspaper advertising campaign have been issued all through 1919 to Bissell dealers throughout the U. S., and in 1920 an even more extensive campaign is planned.

Full information regarding the sales policy of the Bissell Carpet Sweeper Co. may be obtained by inquiring of the advertising department at Grand Rapids, Mich.

YOST ECONOMY

Live wire dealers find ready sales for this labor-saving device. Quick turn-over and attractive profits await hustling representatives. The name of your nearest distributor will be furnished on request.

THERE'S ALWAYS A DEMAND FOR Goulds House Force Pumps

THESE PUMPS are always in demand because of their great convenience. They are so designed that the handle can be swung around to any position. This feature makes it possible to locate the pump in a corner or other awkward position.

Goulds House Force Pumps are used for pumping water from cisterns and wells to various parts of the house. They lift and force water from 50 to 75 feet, according to size.

With one Goulds House Force Pump and a set of interchangeable parts, you can build up any one of eight models. This saves storage space and permits you to carry a sufficient stock for your trade with only a small investment. And, like all other Goulds Pumps, these pumps are guaranteed to satisfactorily perform the work for which we recommend them.

1920 YOUTH'S COMPANION CALENDAR

The publishers of The Youth's Companion will, as always at this season, present to every subscriber whose subscription (\$2.50) is paid for 1920 a Calendar for the new year. The tablets are printed in red and dark blue, and besides giving the days of the current month in bold, legible type, give the Calendar of the preceding and succeeding month in smaller type in the margin. It is a rich and practical piece of work.

The Pacific Coast Steel Co., Portland, Ore., announce the removal of their sales offices to the Multnomah Hotel Building, Portland, Ore.

New lighting, new office, two new balconies and a ladies' rest room are improvements recently added to the La Crosse Hardware & Implement Co., La Crosse, Wash.

Barrett & Ross tell us that in order to meet the demands of their present trade they have leased a large warehouse in order to give better service to their trade throughout the Pacific Coast.

They maintain offices and display rooms in the Rialto building, San Francisco.

Whether the customer is always right or not, it is mighty poor business to argue it out with him.

STANLEY WORKS LITERATURE

Two first class sales arguments came to hand this month from the advertising department of the Stanley Works, one of these being a little catalog describing the new Stanley Garage Hardware for rolling doors and featuring especially their No. 2525 hanger, with which goes a little booklet entitled "Buildings You Have Seen," within whose interesting pages are photographs of the large buildings and railroad terminals equipped with Stanley Ball-Bearing Butts. The use of Stanley Butts throughout buildings of this character proves the confidence architects, builders and owners have in their wearing qualities. The Stanley Works through its advertising department will be pleased to send either or both of these booklets to any merchant upon request.

"3-IN-ONE" OIL FOR TWENTY-FIVE YEARS

In honor of its twenty-fifth anniversary the "3-in-One" Oil Co. has issued a souvenir addition of its house organ, "3-in-One Sense."

Taking as its text Benjamin Franklin's remark that "It is a very decent warrant of stability to serve one thing faithfully for a quarter of a century," this souvenir booklet illustrates and describes the history of the organization of the company, explains the manufacturing process, and the sales proposition which the company offers to its 250,000 dealers.

We can testify that this booklet is exceedingly interesting merely as literature, and as a business opportunity no enterprising merchant should be without it.

HERE'S ANOTHER LIVE ACCESSORY

Enterprising and level headed accessory merchants throughout the West are laying plans for a large business in Auto Kamp Kook Kits, manufactured by the Prentiss-Wabers Mfg. Co., Grand Rapids, Wis.

Every auto tourist is sure to appreciate this handy outfit, for although it folds up to the size of the suitcase, or as in the case of several of the models, smaller than a suitcase, it can be so opened up that it makes a complete stove for the automobile tourist.

Pots and pans are included in some of the outfits, and there is a complete lunch equipment. Both one and two burner stoves can be secured and in two sizes.

Dealers interested in this practical and salable accessory should communicate with the Prentiss-Wabers Mfg. Co., at Grand Rapids, Mich.

"WHEELS" ROLL OUR WAY

The Western trade no doubt joins the **HARDWARE WORLD** in its interest in the little house organ which the Western branch of Lansing Co. is publishing. Volume I, No. 2, of "Wheels" was in the mails last month, and provides an easy and novel means to acquaint the trade with the organization and the products of the Lansing Co.

It is attractively illustrated and tersely edited, and just as the company's motto is "Keep your product on wheels," so we should say, "keep your eye on 'Wheels'."

SEEKS LARGER QUARTERS

The New England Mills Company, Chicago, Ill., has been forced to leave its old location at 1219-1221 So. Michigan Ave., and combine the show rooms and offices with their large warehouse at 1027-1033 W. Van Buren St., Chicago.

HISTORY RECOGNIZES MUTUAL INSURANCE

A study of the figures of stock and mutual fire companies made by Prof. John A. Gilmore, Charlottesville, Va., brings him to the conclusion that about 1550 stock fire insurance companies have started business in the United States; 1300, or 84 per cent, of this total have either failed, retired or reinsured, leaving about 250, or 16 per cent, remaining. He also concludes that about 2900 mutual fire companies have been organized; 700 of these have failed, retired or reinsured. This accounts for 24 per cent of the entire number and he states that 2200 Mutual Fire Companies are in existence today, or 76 per cent of all mutuals organized.

In other words, 76 per cent of all mutual fire companies have survived in comparison with 16 per cent of stock companies.

These figures, which were made some months ago, would seem to indicate that the mutual companies in some way so commend themselves to policyholders that in spite of all competition and opposition they persist.

The mutual company not only furnishes insurance at a lower rate, but is a more stable institution.

A MONEY-MAKING LINE FOR THE MERCHANT

Practically every hardware merchant sells sporting goods.

Those who do are finding it one of the most profitable lines they can handle. It brings to their store a class of business men and women who generally have the means and ability to pay for what they buy.

There is something about a man when he is going on a camping or fishing trip or outing that he doesn't appear to count the cost if it is for his comfort and convenience. Either he has been saving for the trip and looking forward to it for a number of months, or he doesn't have to count the cost and wants the best there is.

The Gold Medal Camp Furniture Co. line is one that is extensively advertised and the cooperation which the Gold Medal Camp Furniture Co. gives makes their entire line A-1 for the retail merchant.

Leading jobbers in various parts of the country are able to supply the Gold Medal line. The agency is a good one.

IRONERS ARE HOUSEHOLD LABOR-SAVING DEVICES

Attention is directed to the Simplex Ironer, whose head office is at 168 North Michigan Ave., Chicago, but who maintain a branch for the benefit of their trade in the far West at 431 Sutter St., San Francisco.

Women have been educated up to the value of household labor-saving devices, and to the worth of modern equipment of all kinds, so it is perfectly natural that just as they are buying washing machines and other appliances to take away the drudgery of household duties, they would find a Simplex Ironer equally valuable to them.

The Simplex plan of cooperating with their dealers and representatives and helping them develop a trade in their respective communities is interesting and worth while, and inquiries may be addressed either to the factories direct, or to the branch house in San Francisco, as may be most convenient to our readers.

Millard & Co., announce to the trade that their new 1920 catalog of automotive equipment and tools is ready for distribution, and can be obtained from the main offices of the company in San Francisco, Cal.

Plumbing and Heating

When you get so you like to buy from a stingy jobber, then people will like to buy from you if you are stingy.

Before you take a business risk, consider what you will do in case of failure. Work for success, but be ready for failure.

The customer who comes back to complain may buy again. The customer who does not come back at all is lost for all time.

When you talk about hard times or high prices, you go out of your way to discourage people from buying what you have to sell.

When doing business with your relatives take the same pains to have everything down in black and white that you would take with strangers, only be more particular about it.

Unless you have a suitable record of what your fire insurance insures, how are you going to get the money after the fire? The insurance company have no idea of paying for goods that do not burn.

It pays to stock quality goods, for you are sure then, that customers will be satisfied and that you will not have to spend time and money adjusting complaints and making adjustments and refunds. If your customers do not come back to make complaints, but are just plain dissatisfied, it is even worse, for they will hold a grudge against the store and will prejudice others as well.

QUALITY COUNTS

Dissatisfaction is the inevitable consequence of inferior merchandise. No merchant can offer articles of poor quality to his trade and reasonably expect, on such a basis, to build a permanent business. Cut prices may lure the unwary the first time, but they cannot overcome the inherent inferiority of the goods. Honest value and good service are the only substantial foundation for any business. Quality counts.

If you are afraid to ask customers how they liked what they bought a month before, there must be some reason for your suspicions.

When you scrutinize the men closely who have succeeded in life in conspicuous measure, you will find some are geniuses and some are plodders, but all have stuck to one thing long enough to do it well and to make it count. There's a chance for you, no matter to which class you belong.

THE FELLOW IN THE STREET

(By Richard E. Smith)

A little book was written, with epigrams replete,
Urging full consideration for the fellow in the street;
Not the hobo or the vagrant who has naught to wear or eat,
But the everyday consumer, buying eggs and bread and meat.

In this book we read that arrogance leads surely to defeat,
The man who can't rub shoulders soon is lost in his conceit.
"To do as we'd be done by" in all dealings—what a treat!
Philosophy for all of us—this "Fellow in the Street."

Put some sunshine in your accents when a customer you greet,
Have offices wide open, for you practice no deceit;
In stores, garage and power house have every corner neat,
For the little things are noticed by the fellow in the street.

A friendly word well spoken counteracts the summer heat,
A little human kindness make a sourish person sweet;
Forget your indigestion when you go back on your beat,
And show a friendly feeling for the fellow in the street.

Announcement

Beginning January 1, 1920, my business will be conducted under the name of:

The M. L. Kline Co.

There will be no change whatever in the personnel of the organization, which will be directed as heretofore entirely under my management and ownership.

In making this change we feel it will eliminate, to a great extent the delays and inconveniences which have been occasioned our customers in having mail or telephone calls directed to me personally, which are intended for the various departments of our company.

M. L. KLINE

Closet Seat

UNPROFITABLE COMPETITION

In a small town there are two merchants who compete regularly for work. One of these men is engaged in the sale and installation of steam and hot-water-heating apparatus; the other is a furnaceman. When an architect desires to obtain estimates on a heating plant, he sends for these men and asks them to bid on the work, and, incidentally they are asked the merits of steam and hot-water heating in comparison with furnace heating. It is not difficult to imagine what happens.

That is not a new proposition. It is not necessary to tell how these gentlemen act, or what kind of things each one says about the other's goods. Indeed, they each know so much about the other man's goods that they spend more time explaining their bad points than they do in telling about the good points of their own.

Why should they do this? Competition, no doubt, is the answer.

The architect, if he is a business man, will be able to play them one against the other. The boiler man will cut his price to get the job from the furnaceman, while the latter will be forced to do the same for fear the boiler man will get the job anyhow. The result is, neither will make any profit whoever gets the job.

Now, this sort of competition is all wrong, principally from the fact that the margin of profit is cut down, until in many instances it is eliminated and the contractor is lucky if a small loss is avoided.

This being the case, the successful bidder really becomes an unsuccessful merchant, embittered toward his competitor, while nothing seems to please the latter more than the monetary loss his rival sustains in carrying out the contract.

This condition of affairs is bad ethics, even if someone concerned in the transaction made money out of it. But it is a game in which both lose, not once, but continually, and they call it competition.

STUDY IF YOU WOULD SUCCEED

So important has retail selling become, that courses are being conducted all over the country, in scientific salesmanship. Where there was one such class five years ago, there are fifty now.

Maybe you and I cannot find time or make it convenient to attend such a course, but each one of us can purchase a few good books and trade journals, and make a study of them, and we can apply some of the principles laid down which appeal to our reason and common sense. The man who never takes any pains to get ahead, and to keep in step with the march of progress, is the one who gets left in the end.

GET STOCK IF YOU CAN

Editor Hardware and Plumbing World:

From the present appearances it will probably be difficult for the wholesalers and retailers to obtain the stock of the various kinds that they handle in sufficient quantity to take care of the demands. In other words, there will not be enough manufactured articles to supply the needs of the buyers.

Any jobber or large retailer will advise you that his principal difficulty is in getting the stock to sell. Any manufacturer will tell you that his difficulty is in getting sufficient raw material and sufficient labor skilled in his line to produce the manufactured product required to satisfy his customers.

This condition cannot help but continue during 1920, or at least the larger part of the year. Therefore, it seems plain that it is good policy for the retailer to be extremely liberal in his purchases of standard stock that is in demand in his territory, and to see that his orders are placed with the largest and strongest manufacturers in the lines making the stock that he requires. The jobbers and retailers profits or success will depend upon getting the stock they require to meet the demands of their trade.

The writer believes that the above answers quite fully your question. The reasons why this condition exists you have not asked for, and it is probably not necessary to give that to you. You probably know why this is so. We do know that in our own line all manufacturers are much behind on their orders and that it has simply been impossible for us to keep pace with the demand.

CLAYTON & LAMBERT MFG. CO.,

John E. Lambert, Sec.

OTTO BERNZ CO. ANNOUNCED

"On January 1, 1920, the firm name of "Otto Bernz," of Newark, N. J., will be changed to "Otto Bernz Co." This change is made merely as a matter of form, and in no way affects the personnel of the concern.

Inquiries and orders will receive the same prompt and careful attention as heretofore under the same conditions and terms."

TURNER'S FORD PRIMER

The Turner Brass Works claims for its "Primer-a-ford" that it is the only primer which works while the motor is being cranked. It is easily installed without drilling holes or using taps, and is protected with screens in three different places, making it impossible to clog.

When the driver throws his switch to start, he pulls a chain on the primer and it works constantly for two minutes, forcing a stream of fine gas vapor up into the manifold. Thus the motor will start and become thoroughly heated by continual priming. A spring in the pump cylinder gradually forces down a plunger until a further supply of gas is cut off.

The price of this accessory is \$4.50 f. o. b. factory at Sycamore, Ill., and the company offers money back to any purchaser who is not satisfied. Dealers may investigate this accessory by correspondence with the makers.

WHEN YOU HAMMER NAILS IN PLASTER

A wise man who knows has mentioned the fact That nails boiled in water, in plaster will act Far better than any regular tack.

You hammer hot nails without any fear Of causing the plaster to crack far and near. So keep this prescription and also idea.

C. W. B. CORNELIUS, PRESIDENT C. W. B. CORNELIUS CO., INC.

We want those of our readers who may not have had the pleasure of knowing the genial personality responsible for the products bearing the "Co-ho Co." trade mark to start the New Year right by meeting him through our pages.

Mr. Cornelius indeed typifies the fact that this is an age of young men. At the age of fifteen he entered the factory of the Wolverine Brass Works and thoroughly learned the mechanical part of the business, a knowledge, by the way, that never comes amiss, and that has stood him in good stead ever since.

To know just how an article is made, of what it should be made, and what it will do, is knowledge that is worth while.

He traveled for the Wolverine Brass Works when only seventeen years of age. A few years later his ability was further recognized and he was made assistant secretary of the company.

In 1907 he established the Pacific Coast branch of the same institution, with which he was connected for a number of years.

Some eight or nine years ago, however, he engaged in business on his own account, when the corporation was formed of which he is the president.

A plumber knows when handling any item bearing the "Co-ho" trade mark that it is an article that can be recommended with confidence and with the satisfaction that it will please his trade.

Their announcement in our issue this month should not be over-looked. They will be glad to give prompt attention to any inquiries.

Creditors have better memories than debtors.

Treat everyone with equal courtesy. The individual who does not buy extensively today may not require your services. But in the future he may recall with pleasure the kindly treatment given him and come to you when he wishes to buy.

Arrange your work in an orderly and systematic manner, so as to make every moment and every step count. It is the people who constantly double-cross themselves who are always complaining that they are not given due credit for their superior intelligence and good management.

C. I. Jones has opened a plumbing and sheet metal establishment at Cheney, Wash.

Harry Stewart and Harry Thompson have become partners in the plumbing firm of Stewart & Thompson, at Selma, Calif.

Bolt & Conrath have moved their plumbing business at Gridley, Calif., in order that they may have more room to install additional equipment and supplies.

NEW CORNELIUS PLUMBING PACK

An announcement of interest to the plumbing trade throughout the Pacific Coast territory is that of C. W. B. Cornelius Co., of San Francisco, whose announcement is included elsewhere in these pages, and describes their new pack No. 3591, containing a two-gross assortment of plumber's nuts and screws, packed in strong, sectional, straw-board boxes with 24 sections. Twenty years' experience in the plumbing business enters into the packing and assortment of these boxes, and every size is staple to the plumber. The C. W. B. Cornelius Co. is well known to the plumbing trade, through its Co-Ho Plumbers' Supplies and Specialties, which are particularly desirable at the present time on account of the difficulty of delivery from more distant markets.

When plumbing fixtures have this trade mark upon them, you are relieved of all responsibility.

All Pacific Plumbing Fixtures are guaranteed forever against any defect in workmanship or materials.

We stand squarely behind this guarantee and make it good.

SALESMANSHIP AN IMPORTANT FACTOR

It is very important for a plumber to know how to "plumb"—to know his intricate business in all its varied branches—to know metals and their temperaments—to know manufactured goods and their different grades, qualities, faults and merits.

And then it is necessary to know how to join these manufactured goods to each other so they will function properly.

Then, too, the plumber must have high ideals and he must put soul and conscience into his work, for the least leak, the smallest defect, the most insignificant slighting of his work may lead to the most deplorable consequences.

These few lines of the requirement of a plumber embrace a lot, believe me. They can be stated in one minute, but it requires years to learn them and assimilate them into your being.

But no matter how perfectly a plumber can plumb he still requires another attribute before he can surge forward "full steam ahead" on his upward path. He must be able to market his valuable assets, and to do this satisfactorily he must acquire the art of salesmanship.

It was a small, uncomplicated and simple world at the time of the sage, Emerson, when he said that "if a man build a better mouse trap than others, though he be in the wilderness, the feet of buyers will wear a pathway to his door."

Situation Changed Today

Emerson wouldn't say that today—for he would know it isn't true. Rather would he say, "become an expert in your vocation, and then become an expert in marketing your work and your wares."

He would add, "your success depends largely upon a knowledge of salesmanship."

Salesmanship is a subtle art, because the successful salesman must "put himself in the place of the prospective customer"—and this is hard to do unless one is long trained in this matter.

The good salesman is one who has developed to a high point the subtle art of influencing men his way. He studies his man. If the man is strong on quality, on first-class work the good salesman confines most of his talk to quality explanation.

Study Your Customer

If the man has a straight mouth and chin, denoting the desire to have his own way, the good salesman permits the man to do most of the talking, agrees with him cordially, and conveys the impression that he is consumed with the desire to please his customer rather than himself.

If the man confesses his ignorance of plumbing, the good salesman gives assurance that he is an expert in the business, and that the work will be safe in his hands.

Thus does he handle each man according to his temperament, and the reward for his selling-skill consists in the gratifying number of orders he lands.

Your Most Valuable Asset

The manager of one of the largest business establishments of the country was talking. He stated that their plants and machinery were worth many millions of dollars; that they had an organization of workers who were trained, skillful, efficient, reliable, and that they had selling agencies in the leading cities of the country. They also possess a good-will, gained by many years of faithful service to the public.

In answer to a question as to what he regarded as the most valuable asset of the establishment he stated without a moment's hesitation that it was their good-will.

The buildings and machinery could be readily replaced if destroyed, he said. Their personal organization, though very valuable, was continually melting away through death and changes, and was being steadily replaced. Likewise if their selling agencies in the various cities should all discontinue there would be others found in course of time.

But if the good-will of the public—its confidence, its faith, its friendship—should be destroyed then would their business be smitten with a fatal blight, and would gradually wither away. Therefore he regarded this good-will as their most valuable asset. He cherished it as the apple of his eye. He preserved and fostered it with the greatest care. Nothing must be done to impair it, no matter how slightly, and every effort must be made to develop and extend it.

Do you see the personal application of this point, Friend Plumber? Did you read between the lines—which, by the way, is a very valuable accomplishment—and note one important point which that manager failed to state?

He failed to state that it was because his predecessors ceaselessly strove for the good-will of the public, when the business was small, that it had grown to the immense proportions of the present.

In other words, not only is the good-will of the public its most valuable asset now, but it was the same good-will which caused it to grow from a little business to a giant corporation.

F. D. Rector has opened a plumbing shop at Santa Barbara, Calif.

Fred Linder has moved his plumbing shop at Nordhoff, Calif., so he may have a better store.

L. B. Cusick has bought a half interest in the plumbing firm of Atoow & Braley at Vancouver, Wash., and the firm is now known as Braley and Cusick.

Some Successful Plumbing Methods

ALMOST without exception every successful plumber lays his success to some particular method he has employed in his business.

It is a fact that no two men do business in the same way, and often a business man hits upon some special method which brings him into close contact with the buying public and insures astonishing success for his business.

Of course work of par excellence is the best insurance for success of any business, but it should not be forgotten that this is the age of advertising and publicity and unless you get your light out from under that bushel no one but your most intimate friends will know that your workmanship is any better than that of the other fellow.

We are beginning to learn that the man who shouts his wares is not always the business braggart, but is more often the astute business man who has awakened to the realization that it pays to get out of the modesty corner and let folks know you are on the job. The first duty of the plumber then is to lay the foundations for excellent workmanship, and then to let the public know that these foundations have been laid.

In a canvass of some of the most up-to-date plumbers I found that a new spirit has been born since the war. It is the aggressive spirit. Plumbers are no longer content to sit in their shops and wait for trade to come in a-smiling. They are going out after it, and in the "going-after" they are conducting campaigns of education among householders.

One Plumber's Plan

A remarkable instance of this is shown in the methods of John DuBois, a wonderfully wide-awake plumber. He tells his own story and I will allow him to do so in his own words.

"Early in the game," he said, "I chalked off what I considered to be my particular business zone. Thereafter I took a personal interest in every house in that zone. I have made it a business to know the kind of plumbing in existence in every single house. I have made lists of this plumbing and filed it away, so that I could reach it in a second's notice.

"I make regular and systematic drives against all antique plumbing in my district. I consider antique plumbing the deadly enemy of all mankind, and as such should be eliminated. Regularly I send out letters to all householders that have this antique plumbing. I am very careful about this letter, and spend considerable time in its preparation. In other words, I make this letter a real argument—one that will hit the householder right in the solar-plexus of his understanding. Unless he is a hopeless dummy he has absolutely no chance of escaping its

logic. I show the evils of bad plumbing, and then I tell the householder what I can do in the matter of installing brand-new fixtures which will insure absolute sanitation for that household.

"You ask if the results are productive. Well I should say yes! I win one out of every ten, which I call a very bangup average.

"Do I place the ones I don't win in the hopeless list?

"Certainly not. While there is life there is hope. Every living man is a possible convert to sanitary plumbing, no matter how stubborn he may be, or how tightly he clings to his purse strings.

Using Business Methods

"Those who ignore my letters I place upon my personal calling list. I go after them hard, visiting them personally in their homes. I make a practice of seeing at least two a day. I go right into their bathrooms and show them how their imperfect plumbing can produce a lot of evil. And in fact it does produce evil and a bunch of it. Almost in every house where bad plumbing is tolerated the inmates pay the penalty in sickness and death.

This was clearly shown in the recent influenza epidemic. The toll was always greater in houses where there was antiquated plumbing. So in the long run it pays, and pays big, to install sanitary plumbing. I point out all these things to the householder, and if he has a grain of common sense he tumbles every time. I bring catalogues along with me and show him what can be done. I make an estimate and leave it with him to think over. One after another I win them over. Of course I don't get them all. There are some who refuse to see the light and others who are not financially able to make improvements.

A Matter of Education

"After all, it is largely a matter of education. A majority of the householders who tolerate antiquated plumbing do so because they think they are practicing economy. So the first duty of the plumber is to get that erroneous idea out of their heads and show them that they are dead wrong.

"Every plumber who earnestly desires to be successful should get into this educational work full swing. It would boom the business 100 per cent and make it better for all of us.

"The day is indeed past when the plumber can loaf in his shop and wait for business to walk in. The war has speeded things up and changed everything. If you want to stay in the swim these days you've got to hustle and take opportunity by the nose.

"The plumber should adopt the attitude that every householder in his particular dis-

CHICAGO, ILL.

trict is a possible customer. The wise plumber will make it his business to find out the kind of plumbing in use in every house. If that plumbing is out of date, the plumber should list the house as a probable field for future work.

"In the past we plumbers have been too independent—have held ourselves too much aloof from business opportunity. Our slogan has been 'Let 'em come to us—the public be damned.' That is why we have the reputation in some quarters of being surly, soiled individuals whose chief aim in life is to do as little work as possible and charge an exorbitant price for that work.

"In the past every other business man but the plumber went out after business, and went after it hard. Why even the graphophone companies sent out agents to make house-to-house canvasses, and in the matter of domestic importance a talking machine ranks way below a sanitary bathroom.

"It's high time that the plumber awakened. Many of them have awakened, but there are still many browsing in the barren fields of inertia with the 'public-be-damned attitude.'"

The Postcard Method

J. M. McGuckin is another enterprising customer who is going out after business. It is also his belief that the time is past when the plumber can play the game of the Lord of the Manor and sit on his plumbing throne and wait keep my eye trained to the plumbing horizon for business. I have found that a dollar won't roll unless you give it a little push, so every chance I get I start dollars rolling toward the door of my shop.

"One of my best methods for getting new business is the postcard method. I mail these cards to all customers and all possible customers. The cards are addressed to me. I inform my customers and others that any time they are in need of a plumber to simply drop one of these cards into the nearest letter box.

"The result is both surprising and satisfactory. When a householder has plumbing trouble he immediately searches out one of these cards and sends it on its way.

"Of course the plumber has got to put out good workmanship or all the advertising in the wide world will do him very little good.

"I have found that it pays to do preventive plumbing work wherever possible. I show all of my customers how they can avoid plumbing trouble—can prevent leakage, frozen pipes, etc. Most householders are always grateful for this advice. They feel that we have a genuine interest in them, and sense that our main object in life is not to profit by their ignorance.

"I, too, am strongly in favor of educational work on the part of the plumber. We have not done enough of it in the past. We cannot ex-

pect that a householder will install new plumbing supplies if he is ignorant of the penalties of unsanitary plumbing.

"I believe the day will come when progressive plumbers will create some sort of an education publicity committee which will devote its time to sending out appropriate literature to householders, and also demonstrators of the benefits of good plumbing. Such a committee would not only benefit the plumber, but would do a great deal toward the uplift of public health in general."

Make New Acquaintances

Robert J. Hoben, a progressive plumber, is going out after business hammer and tongs, and then some. He said to me:

"Do I sit and twiddle my thumbs and wait for it to come in? Well, I should say not. I go out after it with all of my implements at my command.

"These days if you want to stick in business and be a success you've got to make friends and acquaintances. 'A new acquaintance a day' is my motto. Some days I make more than that but I never go to bed at night without making at least one.

"I don't make these acquaintances blindly and without discrimination, but go among the builders, the architects, the men who have the plumbing contracts to hand out. But don't imagine that I am continually talking shop to these men. Nothing of the kind. I have found that if you want to bore a man to death and make him wish you were in the Atlantic Ocean, all you've got to do is to bear down on the shop talk all the time. Sometimes I never talk shop at all, but generally before I leave I manage to plant the impression that I'm in the plumbing business and that my prices are about the rightest in the city.

"I have discovered that there is nothing in the world so effective as the optimistic line of talk, the cheerful face and the glad smile. A genuine glad smile is a bigger asset to a business man than a bank account. I've known fellows to fairly smile their way to success, and I can tell you I devote some time myself to the art of smiling. You make a cheerful impression on a man and he'll remember you right every time. If you leave a gloomy impression he will remember you with a shudder if he remembers you at all, and you can bank on it he won't give you any business.

"So I attribute my success to the faculty of making acquaintances. The day of the grouch in business has gone by. These days if you want to get anywhere you've got to move around among your fellow-man and show you're human. We got enough crepe-hanging in the war to last us for a thousand years. The man who can't smile whole-heartedly these days had better pack up and go to the backwoods."

The Best Is
Cheapest

In the long run. O. & L. Fire Pots and Torches are always the cheapest in the end, for they produce more heat, burn less fuel, are stronger made and will outlast several of ordinary make. We have made many improvements that improve, but have never experimented at the expense of the user. Be Wise and buy the Best. Jobbers supply at factory price. Send for catalog—it's free.

NO MERE MOONSHINE

"You don't appear to like our moonshine licker," said the mountain man.

"Moonshine!" spluttered the city one. "You call that moonshine! Why, that stuff has the making of an arc light in it."

ETERNALLY

"Is the medicine you have for your rheumatism used internally or externally?" "Eternally, I guess. I've used nine bottles and it hasn't helped me yet."

Show those with whom you work and for whom you work that they cannot get along without you—and then your success is assured.

See that the people who come in and do not buy go away with a feeling that they would like to come back again. The next time or the next you will get their money.

Some people have the habit of success—for it is a matter of expectation and fulfillment. Do not expect, however, that the success habit will be acquired in a minute or that it will call for no sacrifices. If you would win, you must pay.

There's No Use Talking

Patented
No. 57 Torch. No. 58 Torch

To be successful you must use tools which give the best results. If you don't, your progressive competitor will get ahead of you. If the best torches and furnaces cost more than the others you might not buy them. The "ALWAYS RELIABLE"

line does not cost more than the others and is guaranteed to give the best results.

Try some now and convince yourself. You will be the loser if you don't.

Your dealer will supply at factory prices. Catalog free on request.

OTTO BERNZ COMPANY - - NEWARK, N. J.

Retail Selling Prices

The following are the present market retail selling prices of merchants in some of the large cities. At the request of many merchants in smaller towns and cities who do not have the opportunity of checking up their prices often, we revise these prices each month. In communities removed from the larger cities, transportation charges would of course be added. As the overhead expense of a retail business in any part of the United States ranges from 20% to 25%, many merchants use these prices to save time in figuring their own. We will be glad to receive suggestions and corrections as to any prices quoted herein and any items not mentioned.

WASHKOSH

The Washer That's Gentler Than Human Hands

THE first question a careful housewife asks about a washing machine is, "Will it harm the clothes?"

Think how easy it will be for you to make sales when you can prove to her that the WASHKOSH is easier on clothes than the old laborious hand method. It's the WASHKOSH vacuum principle that does this—that means spotless clothes without so much as a broken thread.

This is the biggest talking feature ever found on any washing machine. It is a point that will interest any woman, because it appeals to her in-born sense of economy.

A Washing Machine with a Sales Point Women Can Actually See

You don't have to talk theory when you're selling the WASHKOSH to your women customers. Just lift the lid and

show her the conical dasher that touches the clothes as gently as human hands, and forces suds through. They'll get the point instantly.

Here's a washing machine that will wash fine lace curtains and dainty lingerie. A machine with convenient three-way wringer, a noiseless motor. Do you doubt that you can sell this masterpiece?

**Territory Allotments Now Being Made

Carry complete line of International Harvester Co. implements, and the only complete hardware line in town. Annual sales \$90,000. Address Idaho, care of HARDWARE WORLD.

WANTED

Young man with thorough knowledge of hardware and kitchen ware in a large retail store with high class trade and a good location. Must be live, energetic, neat appearing and courteous. Must furnish first-class references. State experience and salary expected. Address O. H. C., care HARDWARE WORLD.

WANTED

I want to purchase in a town of not less than 2000, in any of the Pacific Coast states, a good, clean, going hardware business, that shows a good profit and will range from \$6,000 to \$20,000. Give full particulars, size of town, size of stock, your price and reason for selling. Prefer to deal only with owner. Address Xtra, care HARDWARE WORLD, 388 Taylor St., Portland, Ore.

POSITION WANTED

As assistant manager or director of a housefurnishing department in a retail or department store is the position I would like. Nine years' experience should be sufficient to guarantee my ability to fill the position. Twenty years as a road man, visiting this same trade, has kept me in touch with the line specified. Salary no particular object, but a living remuneration expected for my services. Address G. S. H., care HARDWARE WORLD.

POSITION WANTED

An A-1 opportunity to secure the services of a high class hardware man who has successfully qualified as buyer and hardware department manager handling builder's hardware and material, paints, oil and glass, tools, iron and blacksmith supplies, cutlery, guns, ammunition, fishing tackle and sporting goods, stoves, ranges, household and kitchen supplies. Have had several years' road experience in handling wholesale and retail stocks of hardware. Can make good in any hardware position anywhere. Have bank and business house references; also some cash to back me. Address Montana, care of HARDWARE WORLD.

SITUATION WANTED

Hardware man, age 34, married, 15 years' experience retail and wholesale. Salesman, buyer and manager. Capable, experienced, reliable and the ability for results. At present employed as manager of retail department in wholesale house. Will make change for connection with good reliable hardware firm that has a permanent future. Address Box K. I., HARDWARE WORLD.

SITUATION WANTED

Hardware and implement man, age 35 years, married. Experience, two years as clerk and ten years as manager and buyer for the same large corporation. Machinery salesmanship, credits and collections my hobby. Will invest \$3,000 or more with good, live concern. Climate conditions at present location reason for leaving. Address Credit man, care of HARDWARE WORLD.

POSITION WANTED

Young man twenty-nine years of age with executive ability would like managerial or traveling position. Ten years' experience hardware, house furnishings, sporting goods and window trimming. At present holding responsible position with large retail concern. Highest grade references furnished. Excellent past record; can produce results. Address Box 1822, HARDWARE WORLD.

Can you write your hardware experience? Would you be interested in a position on an association or house organ? If so, we know something that might interest you. Give full particulars as to yourself, experience, how long and who with, what you believe your ability is, and the salary which you would want. Address J. J. P., care HARDWARE WORLD.

FOR SALE

Splendid opportunity in the retail hardware, grocery, gent's furnishing and shoe business. Approximate stock is as follows: Hardware, \$15,000; Grocery, \$8500; Gent's Furnishings, \$6500. Located in a town of 1200 population, with 3500 tributary. Competitors are one small hardware store and three grocery stores. Sales will run \$75,000 annually. Will sell all or either departments. Other business occupying attention. Splendid arrangements can be made with reference to the building. Located 45 miles from San Francisco in one of the best agricultural sections of the country. Address F. T., care HARDWARE WORLD.

JUST WHAT YOU NEED

Sheet Metal Card Holders, Transparent Celluloid Card Covers, Bin Markers and Stock Record Cards for small parts and fittings of all kinds. Plumbers Labels and Stop Valve Tags, Special Bin Labels for Ford Auto Parts, Price Cards. Send for samples. Our prices will surprise you. Haddon Specialty Co., Haddon Heights, New Jersey.

POSITION WANTED

As manager and buyer of hardware department or hardware and implement department combined, by man with 10 years' California experience. Now with one of the largest firms in that state. Reason for wanting to make a change: I do not like present location. Address. Manager and Buyer, care HARDWARE WORLD.

FOR SALE OR TRADE

320 acres of land 13 miles from town of 4000 population. All fenced, small house, well, small granary. About 200 acres plow land, balance pasture, 45 acres plowed at present. Must sell or trade before March 1. Make me an offer. Snap price, \$5800; mortgage \$1600.

J. L. Bernauer, Owner,
Glasgow, Mont.

WANTED

Second-hand 8 ft. cornice brake in good condition. Address L. E. Rood, 115 East Lexington St., Independence, Missouri.

FOR SALE

Stock of hardware, furniture and implements in the richest section of Yakima Valley. Will sell on inventory for cash. No trades. Stock will invoice about \$5000. Address XYZ, care HARDWARE WORLD.

FOR SALE

Factory making builders' hardware, plumbing and auto specialties. Fully equipped foundry, machine shop and plating plant. About \$15,000 required to handle. Located in San Francisco. Write Box 217, care HARDWARE WORLD.

I WANT TO BUY

a hardware store in Oregon or California, prefer a stock of hardware or an accessory business and garage; don't care for general merchandise lines. Would not want it to run more than \$8000 or \$9000. Location and everything must be right. Prefer a town of 3000 or over, if it has good surrounding community. Give full particulars. Address W. C. G., care HARDWARE WORLD.

FOR SALE

Hardware and Furniture Stock in prosperous, well located city in Oregon; a clean, good paying business. Stock will invoice about \$30,000. Anyone wanting a business of this kind will pay them well to investigate this proposition. Address L. O., care HARDWARE WORLD.

WANTED

Man who is experienced in the arrangement of hardware stores and the design of effective fixtures. Should have had retail selling experience in hardware lines. A real opportunity for a young man of good personality and real ability, who can do constructive work for hardware stores. Write full details, giving age, education, experience and salary desired to start. Address reply care of Box 125 HARDWARE WORLD.

FOR SALE OR EXCHANGE

We have for sale or exchange the following:

- 1 New Era Gas Engine, No. 1078, 15 H. P.
- 20-inch Crescent Jointer.
- 1 86-inch J. A. Fay & Engen Band Saw.
- 1 L. G. McKnight 24-inch Sander.
- 1 Pony Planer, 24-inch.
- 1 Boring Machine.

Machines complete with counter shafts. This machinery has been in use about six months. The cost today would be from \$1500 to \$1600. We will sell it for \$850 or exchange it for hardware, automobile or truck.

Address Steubenville Hardware & Supply Co., Steubenville, Ohio.

SPLENDID OPENING

for up-to-date reliable hardware and implement store, which we understand is to be found at Silverton, Oregon, a progressive town of 1588 population.

GOOD OPPORTUNITY

for an enterprising merchant in hardware, stoves, household equipment, furniture, is to be found at Eugene, Oregon. This is in the Willamette Valley, seat of the State University, and a splendid agricultural section.

BLACK & DECKER

Announce THE PRESENTATION OF EVIDENCE

Verdicts are rendered by courts, involving millions of dollars and often men's lives on evidence.

It enters into practically every business decision in one form or another.

Distinctions are always made between bona fide evidence and unsupported statements.

Experts' statements are accepted in court as evidence, but testimony of an eye witness carries greater weight.

No one can doubt the evidence of satisfactory performance under exacting conditions.

Conclusive evidence showing that Black & Decker products have made good under the most severe conditions of work should convince you of their worth to you.

EVIDENCE which cannot be disputed will be presented in a series of pictures showing the use of BLACK & DECKER products under many varying conditions showing the severe uses to which they are being put.

Watch for them.

FEBRUARY 1920

Mr. Stanley Worker Says---

"IN the era of big building that is upon us, reputations as well as buildings will be built."

Stanley Ball-Bearing Butts

Make for permanence in both buildings and business. They are a permanent recommendation for the men who sell them.

THE STANLEY WORKS
NEW BRITAIN, CONN.

STANLEY

Ball Bearing Butts

You Don't Keep Your Car in a Chicken Coop—

HUMAN nature is a peculiar thing. A man wouldn't think of keeping his car in a chicken coop—yet if a leak appears anywhere in the cooling system he is apt to follow the lead of some thoughtless chap who once got the idea that chicken food might stop such leaks. Queer notion, isn't it—clogging up the radiator in the hope of repairing leaks?

Wise owners don't do this. They know that any solid matter in the cooling system is harmful. They know that the only way to make a scientific permanent repair is to use "X" Liquid—a chemical process proved right by over 3,000,000 car owners.

"X" is a pure liquid. It mixes with the water, circulates freely until it finds the leak, flows through and makes a lifetime repair that stands 2,000 pounds pressure. "X" will repair one leak or a thousand—whether the leaks are in the radiator, pump, water-jacket, connections, etc.

Keeping "X" in the water is assurance against future leaks.

**"X" Eliminates and Prevents
Rust and Scale!**

All water cooling systems have from 8,000 to 32,000 square inches of cooling surface—every inch of which must be kept free from

Rust and Scale. Otherwise, the engine doesn't get the cooling it should—and constantly overheats.

The same "X" that repairs and prevents leaks—also loosens the Rust and dissolves the Scale now present. And so long as "X" remains in the water no new Rust or Scale form. The result is a cooler, better working engine—plus a saving of oil and gasoline.

The use of "X" means an actual, visible reduction in upkeep costs. It means a cooling system that is **LEAKPROOF—RUSTPROOF—SCALEPROOF—**and troubleproof.

STANDARD SIZE, \$1.50—will do a \$25 repair job!
FORD SIZE, 75c

DEALERS!

Don't scatter your capital and load your shelves with four or five articles that claim to do the same thing. The wise dealer concentrates—finds out the one best article and pushes that. Whether you sell "X" Liquid or something else—stick to that one—if you're sure it's the best for the car owner.

Over 25,000 dealers sell "X" Liquid. Many sell "X" exclusively. They know that it is the only Scientific Process for repairing and improving cooling systems. It is not a radiator cement, flaxseed meal or "dope." It cannot harm the cooling system. Over 8,000,000 car owners have used it. Over 1,000,000 cans of "X" will be sold this year.

Stock the Special Assortment. Get your share of the big profits. Assortment consists of twelve 75c cans and six \$1.50 size cans. One \$1.50 size included—FREE. Ask your jobber—or write us today.

Ropeconomy

TALK No. 5

"100% PURE MANILA"

This expression is of no more value than "Long Fibre" as a means of designating **quality** in Manila Rope, because of the many grades of "Pure Manila" Hemp produced.

As shown in our last advertisement, there may be a variation in strength of more than 40% between intermediate grades of Manila; our comparisons did not include very low grade Manila Rope as against Bolt Rope.

"Highest grade" and "finest quality" hemp, unless applied to Yacht Rope or similar goods, are evidently improper terms for the fibre in ordinary Manila Rope.

U. S. Government Specifications (Bureau of Standards) designate **quality of fibre** for good Manila Rope, and buyers should satisfy themselves first as to the grade of hemp guaranteed in any rope offered.

Whitlock ALL-Manila is warranted to exceed these specifications in quality of fibre as well as in yardage and breaking strength, and is recognized generally as—

does me good."
Winthrop Wise
And I'm happy as
as he
on the dealers who
KYANIZE
like this one
ore, you see."

My Profits are Bigger—My Customers Better Satisfied

That's the characteristic statement of the typical Kyanize Exclusive Agent.

The first sale of Kyanize just starts the ball rolling. Kyanize always satisfies—the quality is right there in the can. After the initial sale customers come back for more, again and again.

We'll give you real help in making that first sale—in fact we'll make it for you.

Kyanize

KY-AN-IZE

THE BUSINESS-BUILDING VARNISHES AND ENAMELS

The quality line that is backed by a really powerful advertising campaign in the leading magazines, store and window displays that actually sell goods, booklets, color cards and folders that are attractive sales producers.

All for One Dealer Only in Each Locality

Kyanize is sold to one live dealer only in each locality. All we want is one energetic agent and we'll work with him and for him to build up the most profitable varnish and enamel business in his section.

Our new advertising campaign is now ready. It's bigger and more powerful than ever. Winthrop Wise, Kyanize salesman extraordinary, is back—the old Kyanize Agents know what that means and every Kyanize Agent will reap the benefit of Winthrop's work in his cash register.

Dealers in Open Territories—Write Us Today

There is no more attractive proposition in the varnish and enamel business than the Kyanize Exclusive Agency. If there is no Kyanize Agent in your town, write us for particulars. Do it today. Grasp this opportunity NOW.

**6 Solid Whole
Parts Only**

STEEL SHELL HANDLE,
INTERNALLY SUPPORTED

***"Steel Handle"
for
Maximum Service***

GOOD wood handle wrenches are all right in their place, but their place is not where they come in constant contact with damp-

ness, or heat, or steam, or insects.

Consider the battering service a wrench must stand at the hands of a busy mechanic in the course of two or three years of hard daily shop use.

Not only must that wrench have steel for a handle, but it must have a back-bone of the same material—a strong all steel mechanical construction throughout that will **preserve** it when exposed to the elements.

The Coes "Steel-Handle" Wrench has—those six solid whole parts are not only **all steel**, but the **best of steel**, put together the Coes way—to "stay put."

When you sell Coes "Steel-Handle" Wrenches you are handling a product that will **outlast** any other wrenches, because purposely made, tested and found to be 30% stronger.

So we repeat our little slogan: "Cost a trifle more, to return more of the cost in **SERVICE.**"

There's another "return" that interests Dealers—it's the quick cash turnovers, the actual sales of Coes Wrenches over the counter that makes them **worth handling.**

See Your Jobber

Coes Wrench Co.

Six "Best Sellers"

Anything that increases sales and cuts the cost of doing business, is worth looking into, isn't it?

That's what this Pexto Snips Display does.

It boosts sales by putting a choice assortment of this century-old line where your customers can't miss them. With it you'll sell snips to customers who hadn't thought about buying them or had forgotten they needed them.

It lowers costs by reducing the time and labor of making sales. No rummaging around in drawers to find the snips you want to show. No fussing with catalogs to make sure of numbers, sizes and prices.

All the information you or your clerks will need is right on the back of the display, classified so as to be read at a glance. Stand it up or hang it up, use it in the window or on the counter. It shows the six "best sellers" of the complete line of twenty-five.

FOR USE ABOUT THE HOME AND FARM
FOR THE MECHANIC IN EVERY TRADE

Activity in every Building swings on HINGES

In and out! Open and shut, door after door responds to your desires. And hinges make doors possible.

From the time you bound out of bed till you retire—doors, **DOORS**, continually serve you. The home, the office, the factory, the public buildings—all are made serviceable by doors.

And hinges make doors possible.

Think how many times each day you unconsciously bring hinges into play. Unnoticed and forgotten they serve the need for which they are created.

They demand no attention. No repairs. Blending into the needs of everyday life, McKinney hinges and butts do their work quietly yet thoroughly. What better test is there for quality?

For more than 50 years the McKinney Manufacturing Company has produced hinges and butts which swing effectively, unnoticed, unassisted—without a squeak.

During this time McKinney hinges and butts have filled every hinge need. From the common berry crate and tiny cabinet door to the huge industrial gate and cathedral portal—there is a McKinney product of proper beauty and design to fit.

Remember! When you build or repair, the little hinge item may seem small, but it grows big in its unflinching usefulness year after year. See that the name "McKinney" is stamped on the hinges or butts you buy. Then you have settled the hinge question for life. The hinge is vital. It deserves your attention.

McKINNEY
Hinges and Butts

McKINNEY MANUFACTURING CO., Pittsburgh. WESTERN OFFICE, State-Lake Bldg., Chicago. EXPORT REPRESENTATION.

This striking advertisement appears in the January 10th issues of *The Saturday Evening Post* and *The Literary Digest*. In these two powerful publications it carries a message from McKinney Dealers to more than 3,000,000 wide-awake readers and prospective customers. At the same time other full page advertisements are appearing in *Architectural* and *Builders* magazines. All these advertisements will be followed monthly by others—all planned to make it easier for our dealers to sell McKinney products. It's a big advertising campaign for YOU. Back it up to the last word!

Good News!

For fifty years the name McKinney has been known to the trade. Now a huge advertising campaign is telling millions the story of McKinney hinges and their allied products. You, as a dealer, can profit by this advertising. Talk McKinney!

McKinney Products have set a standard in the past. McKinney Advertising will impress this fact on your customers. Be sure you are recognized as local Headquarters for McKinney Products. Let your customers know you carry the McKinney line.

BUILDING IS BOOMING

At this time there is a shortage of homes of nearly a million, to which must be added the normal requirements for the balance of this year. The pressure to inaugurate and complete delayed construction is being felt; the supply of labor is adequate and the resumption of home building, on a large scale is possible.

DRIVER HELD AFTER ACCIDENT

Frank Tracy, 255 1/2 East 1st street, a driver for the Tracy Company, was arrested on charge of operating under the influence of alcohol after an accident.

NAVA

At the net, the N. Coun

The "Build It Now"

idea is growing. In normal times, under normal conditions, it required the building of about 600,000 homes annually. For over two years normal construction has been suspended, therefore, over 1,000,000 homes are needed. This means more business. Be prepared for greater sales, and handle

ROUND CORD PULLEY CHAIN

PATENT APPLIED FOR

GUARANTEED to operate over any common cord pulley, and is stronger and more economical than sash cord.

Get rid of the troublesome and unreliable sash cord, and standardize on the modern product, the latest thing out—"ACCO" Round Cord Pulley Chain. Guaranteed to operate freely and smoothly over any common cord pulley. Will not kink

Infinitely stronger than sash cord and will not stretch or rot—practically ever-lasting. Costs no more than common grade sash cord.

In case of fire "ACCO" Round Cord Pulley Chain won't burn. It will keep the windows closed, prevent drafts and the spread of a conflagration. Looked upon with favor by fire insurance companies.

"ACCO" Round Cord Pulley Chain

is made of the best steel obtainable, and blanked and assembled on specially designed automatic machines. Its strength is uniform throughout.

The builder likes "ACCO" Round Cord Pulley Chain because there is no waste. It can be cut into exact lengths, and the quantity required checked. You can hang more sash with "ACCO" Round Cord Pulley Chain than you can with sash cord. There's no knotting—it's all used.

"ACCO" Round Cord Pulley Chain is easily handled, and won't deteriorate in stock. It is packed in strong cloth bags containing 100 feet of chain, with 20 weight fixtures—enough for five double hung sashes.

"ACCO" Round Cord Pulley Chain comes in two finishes—Coppered Steel and S. R. P. (Special Rust Proof). Order from your regular jobber. If his stock hasn't arrived, write us direct. We'll give you immediate delivery.

DIETZ LANTERNS

THIS IS WHAT WE ARE TELLING 2,500,000 FARMERS (YOUR CUSTOMERS) ABOUT DIETZ LANTERNS

A Dietz Lantern really breathes. The air chamber beneath the burner is the Lungs and the side tubes are twin Windpipes. As spent hot air rises through the globe and out at the top, new air is drawn in through the tubes into the air chamber and this breathes against the flame. The intake of air in a Dietz *Hot Blast* Lantern is mixed air—hot and cold—but in a *Cold Blast* Lantern the intake is pure cold air. The *Cold Blast* Lanterns are slightly higher in price because of their construction but give a bigger, whiter and brighter light.

There are many farmers who can recall the days when corn sold for 15 cents a bushel.

The carrier is and carried over overhead track the feeding troughing vats, as to the corn is lower part above. The up into the power elevator there runs by whatever bin center of the space for the e

How many doors in a house?

Think of all the houses you can, which are in the process of construction. Not only that. Think of all the houses, business offices, public buildings, churches, schools, theaters, etc., in your town that should use door closers. Then you will begin to have an idea of the potential market for

SARGENT

Noiseless Door Closers

Sargent advertising is making this market fertile. Home owners and home builders all over the country have read about Sargent Noiseless Door Closers.

So be sure you are equipped to meet every demand. Stock up. Begin with the Sargent No. 20 Noiseless Door Closer, and go right up the line to the largest size for the heaviest doors.

Then begin by equipping your own doors with Sargent Noiseless Closers. You can then sell others.

All home builders realize, if it is brought to their attention, that hardware represents a very small part of the cost of a home. Also they will realize how much added beauty Sargent Hardware brings to a home—if you tell them.

Here's a good way to get an introduction to the people in your town who are constructing homes. Send us their names and we'll send them our book of designs with a suggestion that they call at your store.

Let Us Put Garage Door Sets on Your "Fast Selling" List

THERE'S good business for some one in your town selling "Cannon Ball" Garage Door Sets. Here are garage door hangers that sell as easily as they run. Every car owner wants them. They carry a good profit and you can sell them on a plan that ties up but little money in stock. Write and let us tell you about it.

The door hanger in the track is the famous

"Cannon Ball"

—two steel ball wheels running in an enclosed tubular track. Each wheel running on ball bearings—frictionless and noiseless.

Fit any door opening. Folding sliding doors fold inside. Protected from wind and weather. Automatically held in place against the wall. Cannot sag. Gives the owner tight fitting, weather proof doors without making them stick and bind. Doors that womenfolk can operate as easily as any door in their home.

This is just one of the many styles of garage door sets that you can get the sale of with the STAR Line of equipment. STAR Equipment includes not only garage sets but everything needed to equip a barn complete.

Write and ask for our catalog.

Building Contractors, Dealers in Building Material and Supplies, Home Furnishings and Home Utilities

WE WANT TO GET IN TOUCH WITH THE LEADING MERCANTILE FIRMS IN ALL PACIFIC COAST CITIES. WE ARE DIRECT FOUNDRY DISTRIBUTORS FOR THE

"Vacuum" Pipeless Furnace

and in Position to Fill Orders in Carload Quantities or Upwards and Also Carry a Large Stock in San Francisco

The "Vacuum" Pipeless Furnace

has revolutionized the house heating problem. It has been on the market 8 years. Over 25,000 have been sold and installed in Middle Western and Northern States.

The Vacuum is the Pioneer Patented Pipeless Furnace and the original of the Vacuum Method of Hot Air Heating and ventilating. It is protected by U. S. Patents 1165122-1171245. The name Vacuum is registered in the U. S. Patent Office No. 101202 and can be used by us exclusively.

The field for the sale of VACUUM FURNACES is large. Remember it can be installed in old as well as new homes without cutting up the floors and walls. It is incomparable for the bungalow style of home.

The simplicity and sturdy construction makes it one of the most economical heating plants known, both as to first cost and fuel saving thereafter.

The VACUUM PIPELESS FURNACE can be installed in an old or new home in one day. It is guaranteed to give more heat with ONE-THIRD LESS FUEL than any Pipe Furnace of like capacity. It will burn any kind of fuel, coal, coke, wood, gas or oil. It is the ideal heating plant for Pacific Coast homes, as it is more elastic in results than any other heater known. In ordinary chilly weather a few old newspapers thrown in the firebox will make the room temperature comfortable.

WE HAVE A REMARKABLY ATTRACTIVE PRICE PROPOSITION TO SUBMIT TO ONE LEADING DEALER IN EACH CITY AND WILL GIVE EXCLUSIVE SALE THEREFOR. GET IN TOUCH WITH US AT ONCE.

A Strong Wire Staple -- and a Felt Washer

**--Little Things, Yet As Here
Applied They Lengthen Life
And Increase Usefulness
Of Collar Pads**

Pat. in U.S. Dec. 1, 1914
Pat. in Canada Apr. 6, 1915

New Patented Hook Attachment

A strong wire staple reinforced by felt washer firmly grips hook to body of pad even though cover has been weakened by sweat and long usage. This lengthens life of pad. It is the greatest improvement since we invented the hook. *Used on all our Hook Pads and only on pads made by us.*

Stuffed Collar Pads

are the best safeguard against shoulders of horse being chafed, galled and bruised by collar. They excel the unstuffed kinds which lack the soft, pliable, cushion-like and absorbent features possessed by pads containing our specially prepared composite stuffing.

Low in Price---Long Lasting---Well Advertised

Our sixth campaign of advertising direct to users, through the medium of leading agricultural publications, is on a more extensive scale this year than any previous one. This serves to further the interest of dealers and jobbers.

Dealers are requested to write us for a supply of new books concerning care of horses and containing many valuable emergency horse remedies. Every horse owner will want a copy. Sent Free upon request.

America's Builders are again Productively at Work

America at peace must make up for the enforced neglect of war times. From sea to sea is heard the rattle of riveters, the clatter of hammers, and the clink of masons' trowels.

Nicholson Files

are helping far and near in the shaping and smoothing of America's munitions of peace — hoisting engines, concrete mixers, drills, air hammers, etc. They are the world's fastest and smoothest cutting Files — uniformly tempered for lasting service.

Write for our Catalog and for File Philosophy — a most instructive booklet about files and their use

PROVIDENCE, R. I., U. S. A.

"Wanted Yesterday"

THE bugaboo of hardware merchandising is the man who has to say "I'll send for them."

How many big dealers have lost good sized orders for taps and dies because they failed to watch the stock and keep it complete with the right sizes?

For the customer who discovered that he wanted taps and dies *yesterday*, a promise of "tomorrow" won't do.

Yes, we know that keeping a hardware stock up-to-date is no picnic—but it pays (doesn't it?) especially with screw-cutting tools.

With a little study you can check up your stock and anticipate those orders *that are surely coming to you*—the best way to hold business, as any good hardware man knows.

Send for the latest **G.T.D.** catalog today and use it as a guide to fill those empty holes and shelves.

Ideal Poultry and Rabbit Fence

Is a Fence and Not a Netting

The horizontal wires in the Ideal Fence make it possible to stretch it perfectly, and **FEWER POSTS ARE NEEDED** and **NO TOP OR BOTTOM RAIL**. Posts may be set a rod apart, and if the fence is well stretched it will be strong and effective.

Hexagon mesh poultry netting is good and has many uses, but it cannot be stretched without pulling together in the middle, hence top and bottom rails are necessary and the posts must be close together.

Like all fences the heavier the wire the longer it will last, so we recommend the heavier styles; but for many purposes, like protecting a young orchard or vineyard where a cheap fence is good enough, the No. 20 will do the work effectively and is less expensive when erected than any other fence or netting with the same size of mesh.

For permanent poultry yards the heavier styles are better and cheaper, life of fence considered.

In all weights and styles the horizontal wires are two inches apart. The size of mesh is governed by the spacing of the mesh wires. Every style has a cabled selvage both top and bottom.

You Will Obtain All Remington UMC Products You Need in 1920

REMINGTON UMC firearms, ammunition and loaded shells will be produced in such quantities in 1920 as to **completely satisfy all demands of the trade**. You will be able to obtain all of our products that you need.

Our inability to serve you adequately during 1919, and especially with reference to arms, was due to the following reasons: At the beginning of 1919 we were still engaged on 100 per cent war work for the Government at our arms plant, and we were the **only** firearms and ammunition concern in this country which had completely suspended the production of sporting firearms. This meant several things:

First: We had to replace all the Government-owned machinery for military arms manufacture with our own machinery for the production of sporting arms. It required time to obtain permission from the Government to do this as well as to effect the change.

Second: We had to obtain Governmental action in securing the release of steel from manufacturers who were tied up with Government contracts. We could not make guns without raw materials. These negotiations ran over an extended period.

Third: During the time between the cessation of Government work and the resumption of sporting arms manufacture we lost a considerable part of our working force. We could not maintain a complete organization in idleness. It required time to rebuild our organization with skilled men.

You can appreciate, therefore, the tremendous task which confronted us at the beginning of 1919. **NO SUCH CONDITIONS CONFRONT US FOR THE FUTURE.**

Our organization is complete and efficient and is being rapidly augmented to handle anticipated demand. Materials are more readily available and we contemplate no delays from that source. Furthermore, we have increased our equipment by nearly one million dollars' worth of machinery and tools, which adds very materially to our productive capacity.

Remington UMC products will be distributed in future as in the past **EXCLUSIVELY** through jobbers. We assure you that your jobber will be able to fill your orders up to the limit of your requirements.

THE REMINGTON ARMS UNION METALLIC CARTRIDGE COMPANY, Inc.
Woolworth Building, New York City

Barked Knuckles

A SET of barked knuckles will teach you more about a wrench than a course in mechanics.

A round shouldered nut you can't get a grip on will add to this knowledge more than a year in a factory.

That's the way you learn that one wrench slips and the other grips—that one nicks its sharp edges under pressure while the other holds true—that one wears out and the other endures. Yes, there is all that difference between such simple things as one wrench and another.

They may look somewhat alike. But the wrench that fits and holds and endures is marked—for you—with Triangle B.

Ask your mechanic. He knows all about Billings & Spencer wrenches, because to him good tools mean a good job.

He will tell you that they are hand-fitting, well balanced, sturdy—tools of tough (not brittle) steel—tools you can lean on and rely on, day in and year out—tools that will gain and deserve such friendship and respect as you accord to tried friends.

It has taken several thousand men fifty years to develop all that Triangle B of Billings & Spencer means. On a drop forging, a tool, or a forging machine, it says: "Rely on me. I am made as well as I can be made. I shall not fail." And it started to say these things to the world of industry at the time of the Civil War.

The scleroscope tests hardness of steel by the rebound of a diamond tipped weight. Modern scientific forging counts on no guess-work

The Billings & Spencer Co Hartford

The First Commercial Drop Forging Plant in America

To cut down the cost per cut

How Many S. P. M.?

"Haste makes waste" is just as true of hack saws as of anything else. Forcing a blade by increasing the strokes per minute means a quickly dulled blade. 50 to 60 strokes per minute is about as fast as it is economical to run when cutting dry. On soft steel, using compound, saws may be run to advantage at about 100 S. P. M., at from 65 to 80 on annealed steel, and on unannealed tool steel at about 60 to 80 strokes per minute.

Follow the Starrett Hack Saw Chart, put on the weight and watch the cutting cost decrease.

MUELLER PIPELESS FURNACE

Turns "Hard Customers" Into Quick Buyers

As every Mueller dealer knows, "hard customers" are not hard customers at all when you can show them a superior product. You can show them by pointing out

specific features, that the use of a Mueller Pipeless Furnace will result in the greatest satisfaction, both in fuel-saving and heating comfort.

Why It Saves One-third to One-half on Fuel

Every inch of surface in the Mueller is effective heating surface. The radiator, for example, has an upward flare to its side—the rising warm air simply must come into contact with this entire surface.

Both warm and cool air passages in the Mueller are large and practically straight. Thus there is unrestricted air travel and the least possible friction.

Another big Mueller feature is the register face—sufficiently large and properly pro-

portioned to deliver a large volume of warm air slowly. This slowly rising warm air spreads out, heats quickly and efficiently.

You can guarantee the Mueller to heat every room in the house comfortably through one register. It burns all fuels, hard or soft coal, coke, wood, lignite or gas. It is easy to set up. No bolts are needed, no need to tear up walls or floors for pipes.

Write for the Mueller Booklet

Get the Mueller Book and find out just how this superior pipeless furnace is constructed at every point. Also let us tell you about our interesting offer to dealers and our plan of advertising which has made the Mueller known in every community.

Lawson "Nu" Jamb Spring Hinges Cost Less Because They Require No Hanging Strip

The Old Way

The Lawson Way

LAWSON "NU" JAMB SPRING HINGES are fastened directly to the door. This saves the cost of a hanging strip and makes them easier to put on.

They are made in single and double acting types in either steel or solid brass. There are 24 per cent more coils in the Lawson "Nu" Jamb Spring Hinge, giving it longer life and greater strength.

Because of these distinctive features Lawson Hinges are specified by architects and contractors on all jobs where appearance and length of service count.

You are safe in stocking the Lawson "Nu" Jamb Hinge as well as the Lawson Surface Floor Spring Hinge and other members of the Lawson line. Lawson Hinges are not dead stock.

Write to us direct or to our coast distributors for prices and details of applications.

COLT

FIRE ARMS

The COLT

Police Positive.

Adopted by the Police Departments of the leading cities throughout this country and Canada.

The COLT

Army Special.

Designed for those who wish an accurate, powerful shooting arm of medium weight and maximum durability.

The COLT

New Service.

The Standard side arm of the famous Canadian Northwest Mounted Police.

The COLT

Single Action Army.

Over half a century in actual use. More of them have been produced than any other Revolver ever manufactured.

SPORTSMEN know that the best reference a piece of sporting goods can have is the unprejudiced recommendation of a brother sportsman—Why? Because he **knows**—in other words he has **been there**.

Every purchaser of a COLT Automatic Pistol or Revolver adds to the ranks of those men (or women) who **know**—who know the best and are not put off with any inferior make.

Individual preference sometimes is for a small caliber arm that uses the easily obtained and inexpensive .22 cartridges—like the .22 COLT AUTOMATIC PISTOL or the POLICE POSITIVE TARGET REVOLVER; some choose the heavier Revolver, such as the COLT ARMY SPECIAL—for the average hunting or camping trip, or the .32 COLT AUTOMATIC PISTOL to leave in the top dresser drawer or carry in the car; and yet others demand the still larger bore—some Westerners still insist upon having the "Old .45 Six Gun," some prefer the more up-to-date COLT "NEW SERVICE"; Uncle Sam decided on the caliber .45 COLT Automatic Pistol.

But all agree that no matter what type or size is selected, it is essential that it be of COLT manufacture.

The great COLT factories, with largely increased facilities, are making every effort to fill the tremendous orders from all parts of the country for COLT Firearms.

With each day filling the hearts' desire of some hundreds of these loyal COLT booster-owners, it will be only a short time before that booster's best friend will be placing his order for a COLT.

Dealers should place their orders now for future deliveries in order that they may satisfy their customers by giving them the best—a COLT'S.

Colt's Patent Fire Arms Mfg. Co.
HARTFORD, CONN.

The COLT

.22 Automatic Target Pistol.

A favorite with the expert, sportsman, camper and for home practice.

The COLT

.25 Automatic Pistol.

The smallest, lightest and most efficient arm of its size made. Fits the vest pocket.

The COLT

.32 Automatic Pistol.

The ideal arm for home protection or to carry in the car.

The COLT

.45 Automatic Pistol.

GOVERNMENT MODEL

After a perfect record overseas this arm took highest honors at the National Shoot in competition with Special Target arms.

Display Sells Razors

The cutlery counter in most hardware stores stands near the door, where the customer lingers, looks around, and wonders what he forgot to buy.

Men are always on the lookout for good razors. The GENCO Display Case, sent you with your first order of GENCO RAZORS, gets their attention.

The handsome case will make them look more closely. Your salesman then simply reaches under its glass top and says: "Just examine the edge on this razor."

In a few minutes your cash register will ring. And your customer will be a satisfied customer. For the GENCO RAZOR has an edge that we guarantee: "GENCO RAZORS must make good or we will."

"Move the FAULTLESS Way"

Safety

LIGHT the ordinary oil cook stove, turn the wick to produce a moderate flame, then turn your back and fail to watch it until the burner and chimney are thoroughly heated and—well the result is well known.

NESCO PERFECT

The stationary, non-burnable Rockweave wick absorbs no more oil when the burner and chimney are heated than at any other time. The flame does not "creep," or increase in height; it remains the same, "stays put," and can be depended upon absolutely. That's why the **Nesco Perfect** is the one oil cook stove "safe to be burned when your back is turned."

A demonstration of this feature alone will sell the **Nesco Perfect** to your most skeptical customer.

Write for illustrated circular describing in detail this and other exclusive features of the **Nesco Perfect**—the greatest of all oil cook stoves.

Domestic Electric Irons Turn Quickly at a Substantial Profit

THE Domestic Electric Iron is strictly a hardware dealer proposition. It is the best iron possible to make, and pays you a very liberal margin of profit. It never fails to please the user, and is backed by our guarantee.

The Domestic is thoroughly high grade in efficiency, durability and appearance. Its design is pleasing, its finish is distinctive and its service high quality.

The Domestic heats quickly and retains the heat, with minimum current consumption. Packed in individual boxes, complete with 6-foot detachable cord and stand. Six irons to the case—two cases make shipping weight.

Push this profitable seller in 1920. An immediate inquiry will get you a very liberal discount. Write at once for details.

Order now from your jobber, or direct from us, and put the goods on your counter. They'll go quickly, showing up a nice bit of coin in the year's business.

UNIVERSAL

ALUMINUM WARE

ONCE SEEN—QUICKLY SOLD

UNIVERSAL Aluminum Ware is new in design—new in quality concepts—new in sanitary features—new in selling possibilities.

Every utensil a strictly quality product.

A Few Features of UNIVERSAL Betterness

Made of heavy sheets of pure aluminum, formed into seamless, solderless, blanked and leak-proof utensils, highly polished, not easily discolored, combining strength and beauty with lasting quality. No sharp angles, cracks or crevices to collect dirt, grease or grime. Sanitary and easy to clean.

Extra large, extra strong, close-fitting heads. Smooth pouring lips.

Handles doubly braced for double strength—made of cold rolled steel, heavily tinned.

Ears with straight, smooth edges, easy to keep clean—made of cold rolled steel, heavily tinned.

Three sizes of ebonized knobs—fastened by square end rivets through square holes, they cannot turn or work loose. Small for the small cover, medium for the medium, large for the large. Knobs have a "white line of distinction" which means Universal quality.

Every Utensil Bears the Stamp

The Trade Mark Known in Every Home

The stamp of satisfaction that has become so well known to every housewife using one or more appliances bearing this trade-mark.

UNIVERSAL Aluminum Ware is being nationally advertised. Your local customers will respond to the advertised betterness of UNIVERSAL utensils. They will ask for the goods. Don't let them ask in vain.

This line is backed by a merchandising policy as liberal and clean as the ware is sound.

MAGNETIC CLOTH

The Most Complete Domestic Help Device Known

It instantly removes Grease, Burned Foods and all dirt from all kitchen ware. ALSO cleans Vegetables, New Potatoes, Sweet Potatoes, Carrots, Parsnips and such like. ALSO Tile work, Marble or Brown Stone Steps and many other things too numerous to mention. ALSO is used extensively for cleaning stained and greasy hands, for instance in machine shops, garages, etc.

These are the days of progress and efficiency. The woman in the kitchen is no longer satisfied with the old-fashioned, back-aching methods of cleaning greasy pots and pans; MAGNETIC CLOTH is now the active housemaid that saves time and labor and conserves sweetness of disposition. The kitchen sink of the modern housewife is no longer complete without a MAGNETIC CLOTH hanging on a hook.

The MAGNETIC CLOTH is as pliable as cloth, entirely as efficient as the best abrasive. Made to slip on the hand like a mitten. After using, rinse in warm water and hang up by the loop, to dry.

As a magic wonder this MAGNETIC CLOTH is demanded everywhere; its market is wide and insistent and it is a logical, inevitable profit-maker for the merchant who reads and heeds the mind of his trade.

Mirro Makes for Better Cooking

A magic tool with which to conjure dishes fit to tempt a king: that is Mirro Aluminum. Tender, juicy steaks and chops are far more certain when this Mirro Fry Pan is used.

Thick and substantial, yet light to lift, it takes heat quickly and holds it long. Therefore, it is a fuel-saver. And food cooks evenly. There are no thin spots through which the flame can scorch in the pure, rolled aluminum of which this Mirro Fry Pan is made.

As for beauty and durability! It is a shining example of both. Mark, too, the ten features of convenience that set it apart from ordinary aluminum ware.

(1) The ebonized wooden handle is replaceable, so the durability of the article is not measured by that of the handle alone. ☆(2) Handle socket is welded on—no wobbling—an exclusive Mirro feature.

Aluminum Goods Manufacturing Company, General Offices: Manitowoc, Wis., U. S. A.
Makers of Everything in Aluminum.

☆(3) Handle has metal cap to prevent splitting—exclusive Mirro feature. (4) Bolt with eye for hanging. ☆(5) Prongs built into socket to prevent handle from turning—exclusive Mirro feature. Handle cannot slip nor give.

(6) Smooth flaring edge is wear-resisting and easily cleaned. (7) Fry Pan is double-lipped for easy pouring with either hand. (8) Smooth, round corners easily cleaned. (9) Famous Mirro finish. ☆(10) Famous Mirro trade-mark stamped into the bottom of every piece, and your guarantee of excellence throughout.

More than a quarter of a century's experience has gone into the making of every Mirro utensil, and back of each is the reputation of America's foremost makers of Aluminum ware. At better stores everywhere at a price that is truly moderate.

MIRRO ALUMINUM

Reflects
Good Housekeeping

Attention of Buyers:—Shown above is the March Mirro Aluminum advertisement which appears in six great magazines going to American women. Read it. Then read this list, and judge for yourself of the effect this advertising will have on March Mirro sales: Woman's Home Companion, Good Housekeeping, Pictorial Review, Delineator, Designer and Woman's Magazine. Better look over your stock of Mirro Fry Pans.

How to buy a pair of pliers

3—Look for the Checker-Dot Handle

Dealers who know good tools, know that they can always depend on Crescent Wrenches and Pliers.

For your convenience and protection in buying and selling pliers, we have adopted this copyrighted, checker-dot handle for CEE TEE CO. Pliers.

Look for this design the next time you buy a pair of pliers.

Your jobber sells CEE TEE CO. Pliers.

GENUINE "PHILADELPHIA" LAWN MOWERS

GUARANTEE FREEDOM FROM ALL
LAWN MOWER TROUBLES

because they are the Highest Grade, Easiest Running, Longest Lived and Most Perfect Lawn Mowers ever manufactured. Their sole purpose is to cut grass, and no other machine has ever been made that cuts grass like the genuine "PHILADELPHIA."

Elaborate painting does not make a lawn mower. An unpainted genuine "PHILADELPHIA" mower will cut the grass more smoothly and surely than many so-called high grade machines dressed in fancy clothes.

Genuine "PHILADELPHIA" Lawn Mowers are dressed, however, with the highest grade paint obtainable, and underneath is a machine constructed along the best known mechanical principles and of the HIGHEST GRADE materials.

Styles "Graham" and "A"—All Steel
Vanadium Crucible Steel Blades. Practically Indestructible

Handle the Lawn Mower that requires the least "push"—both to USE and to SELL

"Forstner" Brace and Machine Bits

For Fine Carpenter, Cabinet and Pattern Work

Specially Adapted for Hardwood Working

The Forstner Labor Saving Auger Bit, unlike other bits, is guided by its Circular Rim instead of its center; consequently it will bore any arc of a circle and can be guided in any direction regardless of grain or knots, leaving a true polished surface. It is preferable and more expeditious than chisel, gouge, scroll-saw, or lathe tool combined, for core-boxes, fine and delicate patterns, veneers, screen work, scalloping, fancy scroll twist columns, newels, ribbon moulding and mortising, etc.

Manufactured by **THE PROGRESSIVE MFG. CO.**, Dept. "A," Torrington, Conn.

Teaching American Boys to Buy Good Tools

MANUAL training courses in our schools are teaching boys and young men how to do good work with tools.

These boys, as a result, are coming to appreciate good tools more than ever. They make up a class of tool-buyers that it is distinctly worth while to cultivate.

We are telling these young amateur carpenters and wood-workers about the quality of Disston Saws and Tools.

To do this, we are using the magazines to which they look for information on mechanical subjects—"Popular Mechanics," "Popular

Science Monthly," "Scientific American," and "Industrial Arts." We send the Disston message to more than three-quarters of a million readers of magazines of this kind. The exact number of subscribers is 781,067. These boys constitute by no means a small market for sales of quality saws and tools.

Telling this market the story of Disston Saws and Tools is another instance of our thorough cultivation of all classes of buyers to increase public demand for high-grade saws and tools.

Next month we will tell you how we reach another class of tool-buyers—the "handy man around the house."

Disston Saws and Tools are constantly advertised in magazines and agricultural publications with a total circulation of 8,497,003 copies each issue.

SIMONDS SAWS

A HAND SAW worthy of public appreciation, and sufficiently good to set the standard of quality throughout the world has been the goal which the Simonds Manufacturing Co. strived for. The object has long since been attained and today the world knows that Simonds Saws, which have been made right since 1832, are the best of the good saws. They sell fast and are satisfactory saws, which dealers handle because they mean true value to customer and reasonable profit to dealer. Not only do carpenters demand them, but they are extensively used by the handy man about the house.

Write for catalog and prices.

700% Returns from Philadelphia

The Quaker City may be slow on some things, but they're right there with the "goods" when it comes to making money with the

Hatfield Complete Sharpening Machine

About four years ago a progressive Hardware Store there bought a Hatfield Machine.

Now instead of putting this machine in a dark corner they put it right in their Show Window.

Behold the crowds! They came—they saw—they brought in their dull safety razor blades to be sharpened.

That machine and a little "dodger" which they put in each package that went out of that store was all the advertising they did. Those sharpened blades did the rest.

They told us they cleaned up \$2,250 in one year.

No wonder men kept taking dull blades there. Some machine that Hatfield. Send for details.

HYFIELD MFG. COMPANY

Superior Casement Adjuster

For windows that open out
Operates without disturbing the screen

Superior Casement Adjuster is the most
convenient to operate because all that is re-
quired to unlock and move the window is to
simply move the handle; when you let go the
handle the window is locked automatically.

Superior Casement Adjuster is the strong-
est because it locks on the rod fastened to
the window and thus combines the strength
of the two rods.

Superior Casement Adjuster holds the win-
dow firmly at any angle and does not allow
the window to rattle.

How 10¢ Saves \$10.00

Half Million Mendets Sold Every Week

HERE'S the most interesting little, big profit producer ever announced in this publication. It is Mendets, a patented patch for graniteware, aluminum, copper, tin, and iron cooking utensils and washboilers, etc. It mends hot-water bags and all rubber goods.

Mendets go on with a twist, require no heat, solder, cement, or rivet. They fit any angle, stand any heat, and stay watertight.

Stores all over the country and in foreign countries are selling over half a million Mendets every week, and each sale nets the retailer a satisfactory profit.

Mendets retail at 10c and 25c the package

Your jobber can supply you with Mendets in the Silent Salesman Counter Carton at an attractive price. Ask him, or write us for the name of a nearby jobber selling Mendets.

Order them by name—Mendets

The Auto-Wheel Coaster Arouses Nation Wide Interest

From a Mail Inquiry to 20 Auto-Wheel Sales for the Local Dealer

A year ago a boy in a small town saw our advertising in boys' magazines and sent us the names of three local dealers, requesting information about the

Auto-Wheel Coaster and Auto-Wheel Roadster

We sent the boy our Auto-Wheel Booklet and wrote the dealer of his interest.

The dealer made the sale—and we followed it up, urging the boy to organize an Auto-Wheel Club. He did so—and this dealer sold 20 Auto-Wheels within the course of two months through the members of this club.

The story is typical of many similar cases. —And the increasing advertising which we are doing this year will multiply these cases many times.

A recent contest brought 8000 inquiries from boys in every section of the country.

Right in your town are boys who are interested in an Auto-Wheel—and all you need to do is to show the product.

Write for our Catalog and plan of assisting dealers. You'll find it interesting.

Frame is best grade malleable iron.

Wheel underneath track prevents derailment.

Wide bearing of the wheel distributes weight and makes it the Easiest Running Hanger on the market.

Packed one pair in box complete with bolts; one-half dozen pairs in a case.

Track has Slidable Bracket, which has made the World's Best Hangers so popular with the building trade.

If your jobber can't supply you we will.

Most Brilliant Light in the World

More than 15,000 Dealers are selling Coleman Quick-Lite Lamps and Lanterns—the most improved match-lighting, gas generating portable lights on the market. Just use a match to light as with ordinary oil lamps.

More Light Than 20 Oil Lamps

Gives a brilliant, steady, white light of 800 candle power, brighter than the brightest electric light, safer than the safest oil lamp—cheaper than candles.

The **Coleman**

Quick-Lite

Fastest selling gasoline lamps and lanterns on market. Make and burn own gas from common gasoline. No wick to trim—no globe to wash. No dirt, grease, smoke nor soot. Absolutely safe. Order from jobber or write for catalog 36, addressing nearest office.

LOS ANGELES CHICAGO

The Fastest Tool Sharpeners Made

The Hummer Grinder

pedals like a bicycle—worm gear drive—all-metal construction—dust-proof ball bearings. Head swivels, making the most awkward tool easy to sharpen. Two Dime-Grit wheels. Every farmer needs a "Hummer."

Twenty-five times as fast as a grindstone without drawing the temper from the tool—that's the big reason why Luther Tool Sharpeners are so popular with all who use cutting tools.

The wonderful Dime-Grit wheels, found exclusively on

Luther
GRINDERS

are the fastest grinding wheels known. They cut the steel instead of wearing it, as grindstones and emery wheels do. No pressure required—no water or oil to cool the tool.

Best Made Grinders

Ask for catalog describing these quick-selling hand-power grinders. Their worm gears, tilting frames and ball bearings make them the ideal tool sharpeners. Especially good for wood-working tools.

Write for catalog and information concerning the complete line of Luther farm repair tools.

Jobbers in Hardware and Sporting Goods

TIME TO ORDER FREEZERS

All of the three, **LIGHTNING**, **GEM** or **BLIZZARD**, have served the housewives of America for thirty years, and, like the cream they create, are in demand in all seasons.

They are built of the very best material and workmanship possible—their ingenious construction makes them easy to operate, quick freezing, and economical to both dealer and user.

The **Blizzard**, being simpler in construction and cheaper in price, makes it a good running mate with either the **Lightning** or **Gem**. They sell themselves and stay sold! No comebacks or complaints. This means easy, net profits for you.

YOUR JOBBER CAN SUPPLY

NORTH BROS. MFG. CO.
PHILADELPHIA, PA.

Nationally Known—Widely Acclaimed —they sell with scarcely an effort

And no wonder! For almost every housewife in the country—and every farmer too—knows the enviable reputation borne by

“ENTERPRISE” Meat-and-Food Choppers

The keen, steel knife and perforated steel plate—the cutting mechanism that has made the “ENTERPRISE” famous—are by-words, wherever culinary skill is known.

There's little need to go into the details—to tell how the toughest, most stringy meat, is chopped into tender juicy morsels. Almost your first sentence will be greeted with, “Oh, yes! I remember seeing that fact advertised.”

“ENTERPRISE” Sausage Stuffer, Lard and Fruit Press

is equally popular among farmers who do their own slaughtering, and who take pride in making superior sausage and lard.

Write for “ENTERPRISE” literature that covers fully, the whole “ENTERPRISE” Line

WHEN is a PUMP not a PUMP?

WE DON'T KNOW—WE HAVE NONE SUCH

Modern Pumps for the home, farm, factory, or wherever power water conveniences are desired.

We are the acknowledged headquarters for pumping requirements west of the Rockies and our sales volume last year substantiates this condition.

Here is one of our "WINNERS"—a truly modern, efficient and economical pump.

Myers Self-Oiling Bulldozer Power Pump

Fig. 1866

Sectional view showing all parts, including Oiling System, Large Valves and Direct Water-Way.

A single cylinder, double-acting power pump for general service on Farms, Plantations, Country Estates, in Apartment Houses, Hotels, Mills, Factories, Railways, Tanks, Stations, or wherever from 500 to 4500 gallons of water per hour are required against 100 lbs. pressure or 225 ft. elevation. This design has been brought out to meet the general needs of the trade for an efficient, durable pump of modern construction at a moderate price.

LARGE STOCK OF EVERYTHING in the pump line from the small spray and hand pitcher pumps to the deep well pumps and power pumps. Also complete stock of Extras for Immediate Delivery.

SERVICE

Special pump catalogs and special advice willingly supplied upon request.

Cordially yours,

Baker, Hamilton & Pacific Company
Seventh, Townsend and King Streets, **SAN FRANCISCO**

A Good Rope— Oceanic Manila

MOST so-called Hardware grades of Manila Rope omit the word "Manila," manufacturers well knowing that this particular grade is composed largely of colored Sisal fiber. The appellation of "Hardware Rope" has been misused and abused. It is unfair to a fraternity having a higher sense of quality in rope than any other class because larger distributors.

OCEANIC MANILA is 100% Abaca Fiber. A good rope, well made and quoted at as low a price as any Pure Manila Rope can be consistently offered. Has no equal in anything in a second grade on the market and a trial will be convincing. It is a departure in rope manufacture that will be appreciated by dealers and consumers where a less expensive Pure Manila Rope is wanted.

Peters Cartridges

THE announcement by the United States Revolver Association of the winners of the Outdoor Pistol and Revolver Championships, again points to the leadership of Peters' Cartridges.

The World's Record, by Dr. Snook, a record by a wide margin, and the excellent scores made by T. K. Lee are added to the evidence of former years and demonstrate the genuine quality of Peters Semi-Smokeless Cartridges, which have for years been used by many winners of the U. S. R. A. and N. R. A. matches.

Users of the **(P)** Brand Won Three Out of Four of the 1919 Outdoor Championships of the United States Revolver Association.

Match "A" (Revolver Championship of America), T. K. Lee, Birmingham, Ala., 463x500.

Match "B" (Pistol Championship of America), T. K. Lee, Birmingham, Ala., 472x500.

Match "C" (Individual Military Championship of America), Dr. J. H. Snook, Columbus, Ohio, 651x750. World's Record.

SAFETY INTERLOCKING STOVE AND FURNACE PIPES

Fire
Preventing

Home
Protecting

Ambrose P. McGuirk's Patent

Our Asbestos-Covered Interlocking Furnace Pipes, Interlocking Stove Pipes, Interlocking Asbestos-Covered Flue Thimble, Interlined Interlocking Ring Flue Caps and Interlocking Elbows are not luxuries nor needless accessories. They are very necessary where stoves and furnaces are used. By fastening and cementing the Flue Thimble in the Flue Hole, and putting in and turning the pipe joint and locking it firmly therein, it can't pull out or be pushed in too far. Each successive pipe link is locked to the receding one, until the whole pipe is firmly locked together, and to the Stove Collar, so that the pipe can't fall down. When the pipe is taken down put in the Flue Cap and lock it, making the flue hole fire safe. Every home and factory owner is morally liable for impending fires on his property, and as fast as flames reap losses will our dealers reap profits on our Fire Safe, Rust Proof, Interlocking Pipes, Flue Thimbles, Caps and Elbows.

Send for Price List and Descriptive Statement.

Hidden Hardware Won't Sell Itself

Don't keep your hardware out of sight, in odd shapes and sizes of boxes. Get it out where people can see it. If you do this you will sell more, because your customers will then be reminded of their needs.

Put "Duluth" Hardware fixtures to work for you, and they will pay for themselves in extra sales made.

Profitable Good Will

The good will of your customers is the measure of your
business—and of your sales. Hardware dealers know
that even a good product will be limited in sales unless
the architect and the public know its merit.

Allith-Prouty Hardware

is known throughout the country wherever hardware
is used—by the public, the architect and the dealers.
"Satisfaction in Hardware," the slogan by which our
products are commonly known, is based on simplicity
of design, quality and service. This means that dealers
can safely stock Allith-Prouty hardware.
You will find the Allith-Prouty line listed below; every
item embraces a life-time of quality.

ROCK-A-BYE NURSERY SPECIALTIES

The universal appeal of the
many items in the Rock-a-Bye line has devel-
oped nation-wide sales. Advertising has created
a demand among the families *right in your trade.*

The Rock-a-Bye items that you see in your
territory have probably been purchased from us direct.
For many mothers write in for Rock-a-Bye products
when they see our advertisements in national
publications.

We prefer for our dealers to make these sales. You
can reap the profit of this fast-selling line by tying up
with our advertising—by displaying Rock-a-Bye Spec-
ialties in your windows, and letting your trade know
that you carry them. *See Your Jobber or Write Us.*

ALUMINUM "Real Solid"

ANNOUNCEMENT

The **"REAL SOLID"** LINE has been for 20 years, the Strong, well known, dependable Aluminum line of Kitchen Utensils.

Our Policy is and has been to give the dealer goods of such quality that assures him not only his PROFIT, but the housewife's continued patronage. We have now added

A New Line of "REAL SOLID WARE"

This is a Heavy Drawn line STAMPED from heavy tempered Sheets, which is far superior, in many ways, especially in Rigidity and Durability.

We have eliminated unnecessary expense of CAST ALUMINUM HANDLES, etc., and are Putting MORE METAL into the BODY of our UTENSILS.

TRIMMINGS—Tinned Iron, using Double Coated Tinned Iron—The best on the market.

PROTECTED HANDLES—All Coffee and Tea Pots with handles, both curved and straight—bottom of handle is protected with Metal Trimmings, so that it will be impossible for flames to creep up over bottom and burn off handle.

OUTSIDE FINISH—The Same HIGH CLASS polish as heretofore.

INSIDE FINISH—Scratch Finish Superior because it does not show finger prints from handling or dirt, which may accumulate while on dealers' Shelves.

We have added 25 New Items, all practical. This makes the **"REAL SOLID"** Line the most complete on the market

Write Today and get our New Catalog just off the Press.

The Buckeye Aluminum Company
WOOSTER, OHIO

FACTS

Worth Remembering

In ordering Window or Fly Screen Cloth from your Jobber don't forget these vital facts:

The amount of **service** and **satisfaction** your customers get out of Screen Cloth depends almost entirely upon the materials used and the methods employed in the making. The label which identifies every roll of the "Perfect" Screen Cloth is your guarantee of the best materials, accurate mesh, the proper width and a full 100 lineal feet to every roll.

That's why dealers buy all of our wire products, Screen Cloth, Hardware Cloth, Poultry Netting, Fly Traps, etc.

Please Order Through Your Regular Jobber

When Life Hangs by a Thread!

FAR out at sea! Battling against wind, fog and storm! Every second a moment of peril!

With face tense, the aviator listens to the whirr of the speeding aeroplane motor—listens for the sound that would tell him in a flash of some slight inaccuracy of adjustment—slight, yet perhaps sufficient to turn success into failure and possible disaster.

But the flying man's apprehension is tempered by the knowledge of the wonderful progress made by present-day mechanics.

For the mechanic of today performs the delicate operations of fitting together engine and machinery parts with Clover Grinding and Lapping Compound. He is enabled to produce work of unflinching accuracy because the patented solidified oil and abrasive formula of Clover successfully meets every condition of grinding, lapping, surfacing and polishing—and Clover is always uniform.

Clover-fitted engines and machinery are enabling man to conquer time, space and distance. Clover is the modern factor in mechanical progress.

Clover Compound is Standard throughout the World. Over 3,000,000 cans sold in 1918. Made in 7 grades—from extremely fine to extremely coarse—a grade for every mechanical purpose. Used in garages, machine shops, tool rooms and factories. Used for general grinding, lapping, surfacing and polishing work on automobiles, aeroplanes, tractors, motor boats and ship engines; locomotives and stationary engines; gas, air and steam fittings, pipes, dies, gauges, etc., and on general machinery of every description. For sale at hardware and automotive equipment dealers and jobbers everywhere.

Send for sample and interesting Clover booklets

CLOVER

Grinding and Lapping Compounds

4-oz. Duplex Cans for Valve-Grinding

This is the famous handy package on which Clover won its reputation as the world's best valve grinding compound. Last year, half a million people bought 2,000,000 of these Duplex Cans. Motor engine valves ground with Clover seat better, endure greater power and last longer.

Sample on request

Pound Cans for the Shop

Made in 7 grades—a grade for every use. The toolmaker will appreciate Clover as the best lapping compound he has ever used. The engine mechanic will find that our Grade D works faster and gives better results than anything else. Clover will positively result in uniformity throughout every lapping operation—it is the only compound which can be used successfully with a power-driven tool.

Sample on request

CAUTION: Avoid inferior grinding and lapping compounds. They cannot possibly give satisfaction. They waste your time and money.

Simplex Ironers Sell Easily

Women everywhere are sold on the value of household labor-saving devices. They have been educated as to the practical worth of modern equipment of all kinds.

So it is logical that they should buy a Simplex Ironer after having installed a good power washer. And that's the way it works out. Your women patrons will be quick to see the saving in time, labor and money effected by the Simplex Ironer.

SIMPLEX IRONER

"THE BEST IRONER"

Our National Advertising Campaign in the foremost publications has established the dominant position of the Simplex Ironer. The Simplex plan of cooperating with dealers for building business is most complete and far-reaching. It will pay you to investigate.

FIRELESS STOVE

COOKS THE
ENTIRE
MEAL

BAKES AND
ROASTS
BROWN

THE DEMAND FOR Duplex Fireless Stoves

is steadily growing. Back of this demand is but a single cause—a satisfactory product properly merchandised.

Duplex Fireless Stoves are made from better materials by skilled workmen under greatly improved facilities. They are guaranteed in every feature by the world's largest manufacturers of fireless stoves.

Because the advertisements in women's publications have convinced the housewife of the convenience and economy afforded through the ownership of this stove, she is seeking the Duplex dealer's store.

Duplex advertising does not end with space in magazines: Duplex dealers are given every selling aid—live store displays, attractive booklets and merchandising helps.

Duplex dealers in every section of the country are reaping the benefits of this widespread demand. They are "cashing in" on the results of Duplex advertising.

If you are not a Duplex dealer now, write today for our catalog and dealer's proposition.

New York Stamping Company
BROOKLYN, NEW YORK

This merchant finds it easy to make out his income tax report

HE has a checking account at the bank and he uses an up-to-date National Cash Register.

From his bank check book and his bills he gets the cost of running his store, cost of merchandise bought, and a record of payments made.

From his National Cash Register he gets a record of ① cash sales, ② charge sales, ③ received on account, ④ petty cash paid out, and ⑤ clerks' sales.

These records give him control over his business every day of the year.

This merchant knows that his register records are complete and accurate, whether they are made when business in his store is quiet or when there is a rush of selling.

Without an up-to-date National Cash Register, these necessary figures would be hard to get, hard to keep, impossible to verify, and expensive to record.

An up-to-date National Cash Register will give you the records you need to control your business.

Grinnell Perfect Fittings

Better Jobs With Less Labor

Poor pipe fittings are dear at any price. We make only one quality and rigidly reject all imperfect castings.

That is how Big "G" Fittings have made their reputation.

We use them as well as sell them

As the manufacturers of Grinnell Automatic Sprinkler Systems, we are one of the largest users of Pipe Fittings in America. That is why we decided to make our own—and make them better. They were so good we decided to sell them.

Big "G" Fittings are time and labor savers because of their perfect and accurate threads. They "make on" easily, make tight joints and stay put.

The L. R. D. Valve with removable disc

The best valve for steam, oil, water, air or gas. Always tight but never sticks. Discs easily changed.

Big Stock—Quick Deliveries

Our stock is always complete in all regular sizes and we can make quick deliveries. National Tube Pipe, cut and threaded to sketch.

Civilized World

Ask Any Woman You Know

Put the matter up to any woman interested in home affairs. Ask her what ware she prefers for cooking. The chances are her answer will be "aluminum."

Aluminum is her choice because it is light, durable, does not chip or crack, and is fuel-saving. In the long run it is the most economical ware she can buy.

VIKO, The Popular Aluminum, is a great line to handle. It includes an extraordinarily wide range of utensils. From it your customers can fill every kitchen need. It is popular in price, too. And well constructed. Don't forget that last, for it means repeat business.

The Popular Aluminum

Are You Getting Your Share?

Hardware World Dealers all over the country are "cashing in" on the new "Harvard" Ball Bearing Truck Caster. Are you one of them or have you overlooked this opportunity to increase your sales?

The new "Harvard" Ball Bearing Truck Caster is constructed of extra heavy gauge steel. The axle is also made of extra heavy steel. The wheel is cast iron. This caster is much lighter than ordinary iron casters yet is practically indestructible. It is unequalled for strength and dur-

ability. The large 5-16 inch ball bearings make them easy running and turning.

Our new "Harvard" Ball Bearing Thread Guard Caster shown below has proved a big seller to shoe factories and mills where lint and threads from the floor are apt to twist around the wheels and prevent free action. Their big feature is the steel guard which prevents this and their 7-32 inch ball bearings.

Every Hardware World dealer should have our descriptive circular No. 105 H. W., showing our complete line. Write for one.

A GRIP LIKE A GIANT HAND

*King of
them all*

MARQUETTE TIRE TOOL

The principle upon which this tool is designed **PROVES ITS VALUE** at a glance. No more Hard Work, Dirty Work, Useless Work, in changing Clincher Tires. Grip them with the grip of a Giant Hand, and its "off again, on again," without Pulling and Tugging, Sweating and Swearing, It was

a happy day for the motorist when the Marquette Tire Tool was perfected. Dealers are handing them out at a lively rate because there's a *real* demand for them. It does not require strength to change a Clincher Tire now---just a little knock, and the job is done. Jobbers are supplying the trade everywhere, but if you can't get prompt delivery from your jobber, write us direct.

FEBRUARY :: 1920

Number 2

The man who lives for himself alone has not much to live for.

Men are mostly like tea leaves—real strength and goodness do not properly come out until they have been in hot water.

Because manufacturers' catalogs cost you nothing is no reason for considering them worth nothing. You can make them mighty valuable if you will use them.

Back of this year are ranged a good many other years. What will you do with this one? If you do not make it better, stronger, sounder, and more profitable than any which have gone before, your experience does not count for as much as it should.

Far-away fields always look green. If there really isn't an opportunity to make good where you are, move on, of course. But before you go to that trouble and expense, canvass the situation, and if other men are making good there—why you can, provided it is in you! If it isn't in you, you will not make good anywhere.

The man who fails or is only commonplace, usually uses up about half of his energy explaining the reason to people. The real reason is (whether he tells it or not) that he didn't apply the right principles to warrant success. Don't waste breath in explanations. Go after your own problem and solve it—for there is a solution, and it's up to you to find it.

When you are inclined to invest some money in some distant scheme to finance the plans of unknown people, stop and ask yourself if it isn't true that for every one who has got rich quick by such means, that thousands have lost. You hear of the few winners. But nothing is said of the many losers. It is safer to put your money into your own enterprises—and to control them.

WORK, CO-OPERATION, PROSPERITY

Put one hundred men on an island where fish is a staple article of sustenance. Twenty-five of the men catch fish. Twenty-five others clean the fish. Twenty-five cook the fish. Twenty-five hunt fruit and vegetables.

So long as everybody works there is plenty. All hands are happy.

Ten of the allotted fish catchers stop. Ten more dry and hide part of the fish they catch.

Five continue to catch fish, but work only part of the day at it.

Fewer fish go into the kitchen.

But the same number of men insist upon having the same amount of fish.

The fifty men who formerly cleaned and cooked the fish have less to do owing to the undersupply of fish. But they continue to demand food.

Gradually greater burdens are laid upon the fruit and vegetable hunters. They insist upon a larger share of fish in return for their larger efforts in gathering fruit and vegetables. It is denied them and soon twenty of the twenty-five quit.

But the entire one hundred men continue to insist upon their right to eat.

The daily food supply gradually shrinks. The man with two fish demands three bananas in exchange for one of them. The man with two bananas refuses to part with one for fewer than three fish.

Finally the ten men remaining at work quit in disgust. Everybody continues to eat. The hidden fish are brought to light and consumed. Comes a day when there is no food of any kind. Everybody blames everybody else.

What would seem to be the solution?

Exactly! We thought you would guess it. For we repeat that you can't eat, buy, sell, steal, give away, hoard, wear, use, play with or gamble with WHAT ISN'T.

Anybody can cut prices, but it takes brains to make a better article.

NEED A BUSINESS MAN FOR PRESIDENT

Under the above heading the Philadelphia Saturday Evening Post says a number of things which, though true, may not be relished in certain high places. We quote the following:

"Three years ago, without full knowledge of what was ahead of us, we elected a professor President for the second time. An able man, sincerely anxious to work for the good of humanity, he made an admirable literary and educational record as President. But it happens that the problems that were presented to him during his second term were neither literary nor educational. His fine idealism ran up against brutal facts. In meeting them he made mistakes, because his training had not fitted him to understand the kind of action and the type of men that the situation called for.

"Not until events forced him did he call on men of affairs and practical understanding; and not until then did we begin to succeed in our undertaking. And these men were never his real confidants and advisers.

Real Problems at Home

"The problems that confront us are first of all home, not foreign. It will help us little to put the world in apple-pie order if the rough-house is to continue in our family circle.

"We are running round in circles now, and the next President must be a man who can break out of them and blaze the road to peace and prosperity.

"Emphatically this in a off year for professors. For some time we shall be concerned with making a living rather than with theories about life.

"We need a business man for President.

"Our problems are first and last economic—that is, straight business problems—concerned with production and distribution—greater production, better distribution. Only a broad-gauged, sympathetic, common-sense, close-to-the-ground man, understanding farming and its problems, manufacturing and its problems, selling and its problems, will fit the issues."

UPHOLD THE CONSTITUTION AND THE LAWS!

"How shall we fortify against lawlessness and mob law?

"The answer is simple. Let every American, every lover of liberty, every well-wisher to his posterity, swear by the blood of the Revolution never to violate in the least particular the laws of the country, and never to tolerate their violation by others.

"As the patriots of '76 did to the support of the Declaration of Independence, so to the support of the Constitution and laws let every American pledge his life, his property, and his sacred honor."

—Abraham Lincoln.

THE OLDER I GROW

The older I grow the more patient I am,
And fonder of people I seem to become;
I find much that's real hidden deep in the sham,
I know that life's juices are under the scum,
The cares that once fretted as trifles appear,
And the faults that loomed large in the
friends that I know
Seem to fade in a background of kindness and
cheer,

The older I grow.

Time was that I questioned the purpose of life,
In the mad way of youth I was quick with my
hate,
But I knew not the depth nor the breadth of
the strife,
And I knew nothing then of the working of
fate.
I judged from the surface and not from the
deep,
I was wasteful with pleasure and fearless of
woe,
But I find that my joys I'm more eager to keep
The older I grow.

I chose all my friends with particular care,
And heedlessly wounded the truest and best;
To many a false god I sent up a prayer,
Then the real things of life seemed a subject
for jest.
And the bad seemed the good and the good
seemed the bad,
I scorned in my haste what was splendid be-
low;
But I find myself longing to have what I had,
The older I grow.

I have learned that men's follies are not printed
deep,
That things youth mocks at are splendid and
fine,
And young people scatter the joys they should
keep,
In the very same way that I once wasted
mine.
I'm more tolerant now, I am slower to sneer,
For I've suffered my griefs and I've winced
at a blow;
And money I find matters less and less here
The older I grow.

Some day you and I are going to pass in
our checks, and then we will come face to face
with values as they really are. And one thing
which we can bank on is—that not an inch,
not a jot or tittle will have been gained by
questionable methods or sharp practices. In
the clear, penetrating light of eternity's morn-
ing, everything will stand forth at its true,
face value. And some people will wonder why
they were so childlessly stupid as to warp
themselves in their days of golden opportunity.

DO NOT TRY TO PUT ONE OVER

There are far too many people, too many merchants, too many clerks who take pride in the fact that they "put one over," as the saying goes. Generally that means that whoever they have been dealing with, whoever they have sold, has been deceived. They "got the best of him." But how often it happens that the people who have had things "put over" on them sooner or later awaken to the fact, and when they realize they have been deceived, they feel perfectly justified in giving publicity to the fact, and in the end, the merchant or clerk loses far more than if he had been outspoken and told the exact facts.

Bear in mind a dissatisfied patron never forgets. If one pays a little more for a first-class article than for a cheaper one, he has the satisfaction of knowing that though it cost him more than he may have intended, it is worth it.

How true it is that when a man has made up his mind that he wants some particular brand or some particular article, if he is over-persuaded, or if there is undue insistence and what he purchases proves to be inferior, he will never forget it. He will be afraid to go back for anything else.

Isn't it far better to satisfy a patron who wants the best. Even though you think you have something "just as good," get what he wants, buy it, borrow it, do anything to give it to him if you see his mind is "set on it." It pays to get the reputation of being accommodating. He will grow to have confidence in your judgment as to whether it is worth relying upon. Do not try to "put things over" unless your customer understands the situation fully and is willing to have them put over.

"LIKE THE ONE IN THE WINDOW"

How many times you hear customers use the above expression.

If your next customer should use that expression with you in connection with certain lines of merchandise, would you know what was meant? Are you familiar with the contents of your store windows today? Do you know what they contain?

Who should know most about the windows, you or the customer? Surely you do not wish a customer to trip you up about an article in your own store window. And you certainly don't like to have to walk out and look into your own window, while your customer points out to you what he wants!

And does this not also suggest the value of your window in changing it frequently so people will be reminded of things they may need.

The fact that a customer loses his temper is just the reason why you should keep yours. It takes two to make a quarrel.

GET THE CASH! OR AN ACKNOWLEDGMENT IN WRITING OF THE OBLIGATION

Has that old item "Accounts Receivable" again hit you in the face?

How is the total amount of this account going to effect your business?

How will the account look to your banker, to your stockholders, or to those who are extending you credit?

Will the account show 1, 3, 5, 7, 10 or more thousands of dollars of accounts receivable and unacknowledged in any way?

We have for several years been urging retail dealers to adopt a definite policy regarding sales that are not paid for in cash at the time of delivery. And now, more than ever, is the item very important, on account of the high price of goods and the inclination of consumers to buy and then take a chance on whether or not they will have the money with which to pay. Particularly is this true with salaried people.

With costs soaring in all directions, their wages or monthly salary go pretty fast.

Retail merchants will do well to start the new year with the policy, rigidly adhered to throughout the year, that unless the person or firm asking credit has a splendid financial standing in the community and therefore little if any doubt as to their ability to pay in a reasonable length of time, that some sort of acknowledgment of the obligation with a definite time of payment will be required at the time of the sale.

As we have said before, no sale is a good sale unless first, cash is received, and second, if credit is asked then a definite time of payment is set and the transaction acknowledged.

An item in your annual statement entitled "Bills Receivable" is very much better than "unacknowledged accounts receivable."

Consider Your Merchandise as Your Cash

No retailer would think of letting a customer have a hundred dollars in cash and charge it up to him on their books without a written acknowledgment of the amount and an agreement to pay the principal back on a certain date together with interest. But many retailers will take this same hundred dollars and buy merchandise with it and then probably turn the merchandise over to a consumer and charge his account, without any acknowledgment or promise to pay on a definite date. Such transactions are poor business and should be eliminated.

No man is wise who sticks so closely to business that he injures his health or narrows his outlook. Don't be unduly offended by what the other fellow tells you when he is angry. Stop and consider whether or not he is speaking the truth.

SOMETHING TO REMEMBER ABOUT PROMISSORY NOTES AND JOINT ACCOUNTS

Have you ever taken a note in some business transaction suitably endorsed, about which you felt reasonably secure?

You hadn't any too much confidence in the maker of the note, but the man who endorsed it was reliable and of ample means. And have you put that note away feeling quite safe and confident about it, thinking that if the man who signed his name on the front of it would not pay; that the other one would?

Don't be too sure that it is safe to forget this matter entirely, for an endorsement on the back of a note does not hold for all time automatically.

If Jones has put his name to the back of Waggle's paper, which is payable in four months, Jones expects that he will only be held for four months and at the end of that time Waggles will pay and free him, but if Waggles doesn't pay what is the situation?

Here it is. The one to whom the note is made, Green for example, must protest that note through his bank or serve other legal notices on the day that Waggle's obligation comes due. If Green does that he can hold the Jones' endorsement. But if for any reason the date slips by and Green does not claim his rights, Jones is freed and takes it for granted that Waggles has paid or Green is accepting the continuation of the note without any endorsement. If you have ever got tripped that way you will not forget.

It is a good plan to have a list of all outstanding notes with dates of maturity and to keep track of them in advance or else to deposit such notes for collection, for then the bank will take care of them. And even careless men have pride in keeping their credit good with the bank.

Joint Bank Account

Another point of which some may be ignorant. It relates to a joint account. At one time it was legally rutable for the survivor to use the funds of a joint bank account as his own or with which to carry on a joint enterprise. The inheritance tax and war conditions changed this, and ruling have been made that a joint account must go through regular processes of law to be available to the survivor.

Sometimes this is embarrassing if plans have been made according to early conditions. It is much safer to pay for a trustworthy legal opinion than to take any risks, for it is surprising how little information will be volunteered by those who might as well do so as not. It is always wiser to be safe than sorry.

Love may never die, but it gets awfully sick sometimes.

YOUR LAST CUSTOMER

When that last customer entered your store did you say, "Good day," or did you grunt and say, "Anything for you?"

Did you smile when you greeted him or did you wear a blank stare?

Did you rise at his approach or remain seated, giving the impression that you were too listless to offer service?

Did the last customer ask to be served or did you approach bristling with business and attention?

Did the last customer find what he asked for in your stock or did he leave without buying? Why didn't he place an order?

Did you serve the last customer to the best of your ability or was he compelled to drag the words from your mouth?

Did you have at hand the goods that last customer asked for, or did you dig under counters or in upper shelves, causing needless delay?

Did you display more goods than the last customer asked for or did you simply show what he asked for and let it go at that?

Did you carefully count, measure or select the goods asked for or did you guess at the quantity?

Did you handle the goods in a pleasant manner or toss them back on the shelves when he did not buy?

Did you chat in a friendly way with your caller while he was waiting for the change, or did you lose all interest in the transaction after the sale was made?

Did you call attention to other goods or novelties in your stock while the caller was waiting for his parcel to be wrapped?

Did you make a neat package or did you think that untidy bundle you handed him good enough?

Did your last customer impress you as one who would call again, and what method did you use to instill that thought?

Did you place the customer's change in his hand or "dump" the change in a heap and let him fumble for it as best he could?

Did you thank that last customer for his patronage or did you take his money without this courtesy?

Did you wish your last customer a pleasant "good day"?

Did you feel that he would call again, and if not, why not?

Did you realize that the last customer that left your shop is an asset to your business?

Are you satisfied with the one-article sale, or do you try to sell larger lots or articles of related use and value? Do you always thank your customer for his patronage? Of course, you have given him "value received," but he could have got that in other places.

You Write the Figures on Your Salary Check

(By T. M. Shearman)

D ID you ever stop to think that you, yourself, write the figures on your salary check?

You, yourself, say how much you shall be paid.

What you accomplish, your own actions, the thought and care you put into your work, are worth just so much money in dollars and cents.

If you have initiative, if you have ideas that are practical, or that can be developed into practical ones, suggestions that can be utilized in anyway to promote the welfare of a business, they are worth so much money, and any institution is more than glad to pay you for them.

If you are careful and particular in your work, if you are economical, if you save, not only by adopting short cuts and efficiency in doing your work, but likewise save in time, material and supplies, even in such apparently trifling things as string, wrapping paper, stationery, letterheads, envelopes—you are adding just so much to your salary.

On the other hand, if you are wasteful, careless, if you neglect your work, if you do it in a slipshod, slovenly, or inefficient manner, if you take no interest in what is going on around you, if you do not correct errors, those of yourself as well as those of your associates, of you are merely trying to "get by," you are deducting from your own salary—from what you really earn.

This doesn't simply apply to the heads of departments, to the managers; it applies as well to the office boy and girl, it extends on up through the institution, the bookkeepers, the salesmen and the stenographers, the buyers, the shippers, the packers. No one is exempt.

Lost Motion, "Putting in Time" Lowers the Figures of Your Salary

If you are wasting motion in such a simple thing as dusting a show case, or enclosing a circular, if you are using double the time, where half the time could accomplish the work just as well, you are worth just that much less.

There is no employer that would not rather pay for a thoroughly efficient careful worker as much as he does for two or three careless, indifferent ones.

As a matter of fact, careless or indifferent workers occupy just as much space as efficient ones.

The example and influence of a careless, time-wasting clerk or employe is bad for the rest of the force, so that the one first-class, alive, active, careful worker is worth many times two or three poor ones.

Would You Thus Waste Your Own Money?

How often have we seen clerks in stores

leave goods, tools, etc., in confusion or exposure? How often workers in various offices leave the stationery around to accumulate dirt, stamps and stamped envelopes left around loose, either to be blown away, swept on the floor or taken by the janitor. They may say, they had nothing to do with it, that they were not using them, nevertheless they are equally guilty with those who did, for these things cost the money of someone.

If it was their own money, their own stamps, would they be equally careless and indifferent?

How often have you looked into a clerk's desk and seen pins and rubber bands, broken pencils and erasers, left lying around loose, half-used, some of them not even worn out.

It is "nothing out of their pockets," sometimes they say, so why should they care?

Managers Selected for Work Done

No one inherits a business, especially the management of the business.

Managers are generally those who have done and can do the work which they superintend.

We have never yet known a thoroughly efficient or reliable manager who wasn't thoroughly competent and capable of doing the simplest work in the store or office, beginning with wrapping bundles, stamping letters, folding circulars, enclosing mail, or work of this nature. They have used the same thoroughness and carefulness in their work whatever it was. That was how they got to be manager. It is the carefulness in little things, the thought used in the detail of the business, by which they have grown and advanced from one step to another.

Such a man can easily "size up," or take in at a swift glance the situation with a group of workers. He does not need to be told who the workers and the shirkers are. It is hard to fool him, even though attempts are daily made to camouflage.

There is a certain sincerity about those who are doing their work honestly and conscientiously, and doing it to the utmost, that one who is less careful, less efficient, an expert in killing time, cannot by any possible means imitate.

Suggestions From Employees

Every institution, large or small, wants suggestions from employees. It doesn't make any difference what it is about as long as it is an improvement, as long as it effects an economy in time or work.

One does not have to be in an institution long to manifest his or her ability.

There are some employers who go even further in keeping track of the work of their employees than simply their hours of labor. They

find how they use their spare time, what kind of recreation they indulge in, the amusements they like. They learn something of their aims and objects, whether they are economical in their personal habits, whether they are saving any money.

You might say this should not concern anyone but the person themselves. In a way it does not, but then again it is indicative of whether or not you are going to make a success in life or not, and whether you are really worth while.

GET OUT OF THE RUT

Have you noticed how easy it is to get into a deep rut on the road and how hard it is to get out again?

There is a mental rut that is even harder to get out of, once we slip in. The rut that is formed by narrow thinking and narrow living.

Some people think and live so narrowly that before they know it they are traveling along in a rut so deep they can't see over the edges. They come to the conclusion that there is nothing worth while in life. They see only the sides of the rut. And the road ahead is a long, drab and discouraging groove. They lack vision.

No wonder that they are pessimists, cynics and scoffers. No wonder that they have no faith in anything when they have no faith in themselves.

Vision combined with faith and an answering will "to do" is the formula for success. Success is not inherited nor won by lottery. Success is the reward of vision, faith and endeavor.

"TAKE YOUR PEN IN HAND" AND WRITE US

When an Englishman is displeased with the condition of things, he sits down, takes his pen in hand and writes to his newspaper, or if it is a business matter he writes to his trade journal.

The paper forthwith publishes the same and invites its readers to give suggestions as to how the unfortunate conditions of affairs can be righted.

The subscribers of the paper, seeing the invitation, likewise give their ideas. Thus the editor of the paper, having the opinions of many practical people, is able to advance suggestions of value, and to give information worth hundreds of dollars to the various readers of his journal.

This is as much your publication as it is that of anyone else and we welcome your suggestions and criticisms as well as your praise. None expect to please everyone all the time, so send in your suggestions and ideas. They will be more than welcome.

DIFFICULTY WILL BE TO GET GOODS

Editor **HARDWARE WORLD**:

As to the policy that should govern merchants in their purchases for the ensuing year:

The present condition of the foreign exchange market in which there are no indications of improvement for several months at least, unless some of the projected plans for extending credit to foreign countries eventuate meanwhile, will mean a serious diminution for our export trade from now on, unless our purchases abroad are increased to an extent which does not now seem possible. The loss of this foreign business, however, should be made up, to a very large extent, if not entirely, by the need which exists in this country for increased housing facilities and other projects, public and private, which have been held in abeyance during and since the war, together with the need of the railroads for the general rehabilitation of their equipments.

At present everything seems to point to a shortage of both labor and material. If the present volume of trade should continue any probable falling off in the volume for a large part of the year, at least, will not offset this shortage which seems to point to higher prices for both, unless producers and merchants will be satisfied with smaller profits than those which have existed during the current year.

As we see it, the principal difficulty with which merchants will be confronted during the first part of the year, at least, will be in obtaining the necessary merchandise to meet the demands of their customers.

Very truly yours,

ATLAS TACK COMPANY,

Wm. F. Donovan, Pres.

FACTORIES WILL BE SWAMPED WITH ORDERS

Editor **HARDWARE WORLD**:

The indications are in our business that 1920 will be a very prosperous year generally, and it is obvious that it is going to be a tremendously big year for the automotive trades, which, of course, embraces the accessories. This makes it apparent that merchants should place their orders sufficiently in advance to insure deliveries of material when wanted, as every factory in the automotive line and the automotive accessory line is going to be swamped with more orders than they have facilities to take care of.

We do not urge any of our jobbers to over-stock. In fact, we urge them to carry in stock not more than a sixty to ninety day's supply, but the jobbers should watch their stocks carefully and be in sufficiently close touch with the source of supply to know how far in advance to place their orders to prevent there being a gap between the closing out of one stock and the time an additional stock is received. They should also take into consideration the transportation situation, which has not been good for some time, and which probably will grow worse. Very truly yours,

THE BLACK & DECKER MFG. CO.,

G. W. Brogan, Adv. Mgr.

The man who sticks too closely to business, who never allows himself relaxation and a chance to mingle with his fellows is the one who grows old early and who is foolishly anxious about many things. Work hard, when you work, and play in whole-souled manner, having as much fun as you can of a wholesome nature in your hours of recreation. The man who whines and goes to pieces when the tide turns against him is doing his level best to keep that tide against him.

KEEP STOCK WELL ASSORTED, BUT DON'T OVER-PURCHASE

Editor HARDWARE WORLD:

We believe that it would be wise for dealers to carry a fair stock on hand for spring wants, and would also advise them to get in their goods for spring as early as possible. What will be after July 1 depends upon circumstances.

We believe that present prices are entirely too high. We further believe that good many of the manufacturers are taking advantage of the situation, and are what we call profiteering. For instance, there is no reason why bolts, screws, hinges and a great many other goods should be from 300 to 500% above what they were five years ago. We are willing to admit that prices undoubtedly should be higher than five years ago, but not the advance that most of the manufacturers are asking.

Grateful to the Steel Corporation for Keeping Prices Down

In this connection, we wish to also kindly go on record that the consuming trade of the United States should be extremely grateful to the United States Steel Corporation for trying to keep down prices. For we believe that if the United States Steel Corporation had hogged the market the same as some others, we would be paying still higher prices than are in vogue at the present time.

These extreme prices that are being asked at the present time are detrimental to good business expansion. We do not understand, with the increased manufacturing capacity since the war time, why goods of all kinds should be at such a high value. But, we also would say further, that it is not what we believe, but the way it is.

Therefore, we would advise any merchant to keep his stock fairly well assorted, but not over-purchased, at least for the first two quarters of 1920.

The above is simply the way we look at it, others might not agree. Yours very respectfully,

THE STOLLBERG HARDWARE & PAINT CO.,
Toledo, Ohio. John Stollberg.

MUST KEEP UP STOCK TO KEEP IN BUSINESS

Editor HARDWARE WORLD:

We take pleasure in giving an explanation of our own policy in regard to the present conditions.

We feel that if one intends to keep up in his business it is necessary to keep up the stock in the regular, conservative way, but, of course, if one prefers to go out of business, and discontinue his stock, it is wise for him to close out under the present high inflated prices.

We are, therefore, keeping up our regular lines, by placing our orders for our needs from time to time, and we have been compelled to place them away ahead of our needs, owing to the lack of ability of the manufacturers to furnish the goods within the time they are needed.

We believe this to be a simple and safe method. We do not advise to speculate in any article under the present prices and conditions. Yours truly,

LOUIS HANSSEN'S SONS,
Davenport, Iowa. C. E. Hanssen.

It's all right to be satisfied with what you are doing, but let the other fellow pat you on the back. If you use your own energy climbing and giving yourself an occasional needed kick to keep in the upward path, you will not have time to hang bouquets on yourself.

KNOWS HIS BIBLE AS WELL AS HIS BUSINESS

Editor HARDWARE WORLD:

The position of the buyer today is very much like that of Lazarus in the parable of Lazarus and the rich man—glad to get the crumbs that fall from the rich man's table.

In our opinion, with the uncertainty of the market conditions and the general labor unrest and the almost inability of manufacturers to keep the jobber supplied, the buyer should look from six to nine months ahead in his purchasing. We do not believe that this is a matter of pure speculation, for with the almost incredible demand for goods of high quality a jobber should not be afraid to buy very liberally for the next several months.

It is our opinion that prices, in numbers of lines, have not as yet reached their top notch, and certainly no declines are in sight. However, the average buyer, with his intuitive knowledge of the game, as a rule can easily check himself in time. Business conditions will undoubtedly continue to be good, at least until far in next year, and the jobber who is doing the business is the one who has the nerve to take a chance on buying under the very uncertain conditions of prices ruling at time of shipment, and shipments being made any time the factory can accumulate enough stock on hand.

Trusting this will be of service, we beg to remain,

Yours truly,
KNIGHT & WALL COMPANY,
Tampa, Florida. J. F. White, Buyer.

ALL SEEMED TO HAVE LOST THEIR REASON

Editor HARDWARE WORLD:

The present situation is a most unusual one. No one can tell just what the end will be. Jobbers, manufacturers, laborers all seem to have lost their sense of reason, and none of us seem to be satisfied with what we are getting out of business, no matter how much that is.

Merchandise continues to advance, and is harder to get every day, and there seems to be little prospect of early decline, because of the unreasonable expectations of the three classes named above, and from further fact that labor must be short for some years to come by reason of the fact that we have had no immigration for the past five years.

Thinks Steel Corporation Must Be Lonesome

There may be other concerns that have been sane, and reasonable, but I recall particularly the fact that the American Steel & Wire Co. must be getting rather lonesome in its position of maintaining prices at a low level, and that they are to be commended for their position. The outlook of business for the immediate future was never better, and let us all hope that prices will not go any higher. Yours truly,

Atlanta, Ga. KING HARDWARE CO.

HINTS OF SALESMANSHIP

Don't deal in woe or tearfulness.

Most folks have a supply
Of wares like these, and cheerfulness

Is what they want to buy.

So deal in joy and truthfulness,

Put on a smiling phiz.

And you'll preserve your youthfulness

And do a lot of biz.

Some men drop all their money trying to pick up more.

Feminine Psychology and the Hardware Dealer

Study the Women of Your Community and Know to What Class of Trade You Are Catering

All the women are lovely—lovely,
All the women are fine,
Whether they wear their hair in curls
Or cultivate their mind.
Whether they're 20, 30, 40, 50 or 63,
All the women are lovely—lovely,
All the women for me.

You, Mr. Hardware Man, have probably known that all the time but did it ever occur to you to turn it into good, sound, Hard Wear philosophy, and apply it to your own business?

Have you ever stopped to consider women from a wholly business standpoint?

Have you made of them a business asset? If you have not, you are far behind the times.

Did you ever survey your own store, and note the vast number of articles that are there aside from the cut and dried hardware—electrical appliances, enamel ware, aluminum ware, tin ware, glass ware, pots, pans, kettles, dishes, spoons, cutlery, silverware, refrigerators, stoves, washing machines—why the very vastness and scope of the thing is an inspiration in itself, and when all these articles are set forth attractively, invitingly, what a joy they are to the heart of every woman. And when I say every woman, I mean every woman, for a woman is a woman at heart no matter in what station of life she may be found! Whether she is a business woman, a professional woman, a housekeeper, or a woman of leisure, she is attracted by nature to these things, and right there, Mr. Dealer, is where your problem comes in.

Study the Women of Your Community

You are going to sell these things to women, not to a woman, but to women in various phases of life, and you cannot throw a conglomeration of articles, hit or miss, into a pile, and expect to sell them to these women.

Study the women of your community, to what class of trade are you catering?

If you are located in an outlying district, perhaps in the residential section, or in the suburbs, or a merchant in a flourishing country town, every one of these sections has its distinct type of women.

The big city dealer has the advantage of appealing to all classes of women, in all walks of life, and he should make the most of his opportunity.

He has his window and counter display, his system of store display, and should be making much more money now than he ever did before.

Small Dealer Has His Opportunity Also

But this need not discourage the smaller dealer, for the world is big with opportunity, and his special field fairly sizzles with it.

Now, Mr. Country Dealer, what do the good women of your community want? They are housekeepers, most of them; they live for their homes and their families. They are just as "human" in wanting the same conveniences as their sisters in the city. Usually there is the keenest rivalry among them in the housekeeping line. They don't want expensive things, but they do want economical, good looking household articles that will make their kitchen attractive and lighten their work.

New devices in the cooking utensil line, aluminum ware, tin ware, enamel ware, metal ware, meat choppers, baking tins, bread makers, preserving jars, cutlery.

Put in a line of attractively displayed Rogers silver and see if you can't tempt Mrs. Jones to put in a set as a wedding gift for her daughter. And if Mrs. Jones does it, you can depend upon it that Mrs. Brown will do likewise, for Betty and Jane went to school to-

Last month we presented to our readers a woman's comment on the attitude of the average hardware clerk, and the impression that the average hardware store makes on the woman buyer. The suggestions there were perhaps especially directed to the clerks and salesmen.

MISS LILLIAN HOWIE

Miss Howie has written rather to the merchant than to the clerk. She has separated the hardware store in general into the rural store and the larger city store. Furthermore she has divided the women buyers into groups and suggested the appeal that should be made to each. Miss Howie has studied the hardware business for several years, and this combined with her general information makes her well qualified to write with authority on her subject. We cannot commend such an article as this too highly to our readers for careful consideration and practical application.

gether, and Mrs. Jones won't let her good neighbor "put one over on her."

Interest the prospective bride and make her a permanent customer.

Secure the interest of the prospective bride herself. These are the days in which she is thinking in terms of household equipment. Some well displayed wares, a little tact and kindly interest on your part and you have not only helped to equip her new home, but you have made of her a permanent customer. The progressive, up-to-date merchant should be alive to the possibilities of June and its accompanying weddings, as the officiating clergyman.

Women Influenced by Clean, Neat Appearing Stores and Wares

Women are sticklers for good housekeeping. Don't have any fly specks or dust on your enamel ware, tin or aluminum ware. Keep your dishes and utensils bright and shining. Put them where they can be seen, and arrange them attractively according to their size and use.

Give the new things an especially prominent position and be sure you can explain all their merits, pro and con. Neat little piles of saucepans, kettles, pots, roasters, etc., will attract these good women like flies to molasses.

All merchants sell cooking stoves. It would be a good drawing card to get some of the expert cooks in your vicinity to give a demonstration in your store. Advertise the proceeding in your local paper, make it a community affair, and you will be well repaid for your efforts.

Women Always More Responsive

If your town is drowsy, wake them up. If it is getting just a little tedious selling hardware to men all these years, appeal to the women, and if you go about it in the right way you will find them more than responsive.

Read the advertisements in your trade magazines carefully, study the news pages for new goods and methods of disposing of them. Make your windows neat and attractive, selecting such objects for display as will appeal instantly to the economical and housewifely instincts of the observer.

Window display is an art in itself and each month the **HARDWARE WORLD** devotes several pages to descriptions and photos of sales making windows.

Mrs. Saunders has come to town with Mr. Saunders in their Ford. Mr. Saunders goes into the Thompson Hardware Store on the main street to make some purchases. Mrs. Saunders, sitting in the machine, is instantly attracted to Mr. Thompson's window display. Probably there is displayed there, some new Pyrex ware which Mr. T. has just purchased.

A self-appointed agent for your Pyrex ware

Mrs. Saunders remembers that she has read about the wonderful results of this new ware in some of her late housekeeping magazines. In an instant she is out of the machine, and at Mr. S.'s side. If he doesn't purchase that Pyrex now, he will later. Mrs. S. goes to the Ladies' Aid, her Community Club, or even to church on Sunday and starts the ball rolling. Mr. T.'s window display has been a success, and his store is in a fair way to become one of the most popular in the town.

Opportunities for Merchants in Larger Towns and Cities

The dealer in the larger cities and towns, or in the suburbs, should study the women folk of his vicinity.

These women are more leisurely than their country sisters. They probably have more money to spend and they are prone to want as much luxury as their purses will allow.

Make the practical, energetic business women your friends.

Get out your electrical appliances, set out your percolators and waffle irons, your toasters and silver ware. Display these things in your store and window to the best advantage, so when Mr. Business or Professional Man comes to the store with his better half to get some fishing tackle or something in the sporting goods line, or perhaps some accessories for his contemplated auto trip, she will not go away empty handed or without a "bee in her bonnet," as it were.

Everyone Influenced by What They See Displayed

If your store is large enough, set out a prettily arranged table, thus displaying many articles at a time to the best advantage.

If it is winter have an electric heater nearby; if it is summer an electric fan. Have these articles connected up so they may be set in motion and thus complete the effect.

An electric lamp with an effective shade could be lighted, if occasion required, to throw a pretty, soft light over the table.

Feature Goods for Each Holiday

If your store is not large enough for such a display, advertise more practical things, but do it to advantage. Take the seasons into consideration. Make each "red letter" day, or holiday, on your calendar a red letter day in your store.

Play up every opportunity to display different goods in different phases.

No mere man can realize what a train of thought the suggestion of a holiday arouses in the mind of a woman. If she has the wherewithal at all, she will immediately visualize some sort of entertainment, which will necessarily involve some little extras in table, kitchen ware or household equipment of some

sort. The hardware dealer who takes into consideration this phase of womanly psychology is a wise man indeed.

Woman a Complicated Proposition

These are two types of women, but patience, there are more! You never realized before, did you, what a complicated proposition the modern woman is, how many phases of life she occupies, and how her various needs must be supplied in each particular issue.

Did it ever occur to you that you were the logical channel through which many of these needs were supplied, that you and your store fill a big place in the life of our American women?

What about the business woman, the professional woman, the sports woman?

As you see the neat business woman, the pretty stenographers and clerks file by your store each morning, stand at your door and see if they glance at your window as they pass. If they do not, there is something the matter with it. Think a minute, and consider what these women want.

A cooking demonstration is one of the best sales arguments a merchant can use.

You can't sell them pots and pans, silver ware, preserving jars, kettles, baby scales, incubators, etc., for the simple reason that they have no use for them. But you can sell them a small percolator or toaster for their hasty breakfast, a thermos bottle to carry with their lunch, a small ironing board and a light electric iron to "do up" their shirtwaists in the evening. Possibly they want a little oil stove to heat their rooms or apartments in the evening, or a chafing dish to entertain their friends.

If you are in the pathway of these practical, ambitious women, make them an asset, make

A well set table is a joy to the heart of every woman. To the woman who has the time and means to indulge her fancy it is a positive inspiration.

them your friends, see to it that you have what they want, that they will patronize you and not pass you by and go to the large department stores because the variety is greater and they have seen what they want on display. You probably have that very same article, Mr. Hardware Dealer, but how do they know it unless it is put before their eyes, properly displayed and priced?

So there you have her, the American woman, with all her vast possibilities, with all her whims and necessities. She is your big business asset, she is your stock in trade, a vast portion of your success as a modern hardware dealer depends upon your ability to comprehend her, to classify her, to cater to her needs, to bring her to your store, and after you have brought her, to keep her there.

The New Year is before you. It is big with possibilities. Opportunity in the form of woman is knocking at your door. Open it Mr. Dealer and go forth taking with you the best wishes and hearty co-operation of the **HARDWARE WORLD** in this big, rich field of endeavor.

When you start to make a sale, whether it be little or big, stick close to the purpose in your mind. Do not be discouraged by sales-resistance, objections, or ideas contrary to your arguments. Be tolerant, let the prospect do enough of the talking to satisfy him, remain pleasant and cordial under all circumstances and give your customer to understand that the thing above all others which you want, is to please and satisfy him. Then, and not till then will you win out in the large majority of cases.

The man who changes his business policy so often that he doesn't know where he is at, is like the dizzy pedestrian who zigzags in front of an approaching automobile. Both are sure to get hit mighty hard some day. It's lots more sense to choose a path reasonably straight and to follow it.

An optimist believes—a peptimist does.

START SOMETHING

Start something, and then—keep it going!

Come out of your opium dreams;
Today is a good time for showing
The merit there is in your schemes.
You may be equipped to the limit,
May know just the right thing to do.
But if you neglect to begin it,
How can you put anything through?

Start something! You stand undecided,
And hesitate where to begin,
And soon will your best years have glided
To the past, with your one chance to win.
Though fortune be patient, don't flatter
Yourself that she favors you so
That she'll guide you to triumph, no matter
What contempt for that favor you show.

Start something! The motto "Manana"
No winner e'er chose for his own;
Inscribe "Do it Now" on your banner—
Of success the philosophers' stone!
You were placed here to work, not to idle;
Scorn to dally existence away;
On your wayward will tighten the bridle—
Start something! Start something today!
—Spencer Ellis.

MENTAL HONESTY

Use the dictionary, the encyclopedia and the atlas. Look things up. Get your meanings clear. Don't take words for granted.

Don't imagine that you have to form a definite opinion on every subject that arises. Ninetenths you must just lay on the shelf and await further evidence. The way to be an intelligent and well informed person is to begin by being an honest agnostic (one who doesn't pretend to know).

Keep open-minded. Be hospitable to new ideas.

Have fixed principles, not fixed opinions. Opinions ought to change as you get new information.

Think as a judge, not as a lawyer. Try to understand, to get at the truth, not to prove you are right.

Never mind about being consistent. Be honest.

Listen to those who differ from you; be careful of yourself with those who agree with you.

Nothing is more beautiful than utter loyalty to truth, and a willingness to acknowledge it wherever you find it, and to follow it wherever it may take you.

Of course we hope you will have good luck on your side, but also we hope you will not wait for luck. You can make your own luck by hard work and the use of common sense.

Pushing Tools in February

Methods Used by Successful Merchants

COPIOUS RAINS

Have made conditions ideal for gardening operation. Good seeds and

GOOD GARDEN TOOLS

get results. We carry a stock of the best garden tools, consisting of hoes, rakes, spades, shovels, pruning shears, lawn rakes, etc. Take advantage of the many specials offered in house and garden

TOOLS

offered during our Great February Tool Sale
HARRIS CO.

In this way the Harris Hardware Co., San Diego, advertised their sale of tools in February.

Of course it is only in the warm southwestern climate that garden tools could be advertised to advantage so early in the season, but the general line of carpenter's tools could be pushed to advantage at this season in any section of the country.

Axes are an especially timely line to push during this month, and so are hatchets, owing to the fact that they can be linked so effectively with the hatchet that cut down the famous cherry tree.

Bering-Cortes' Washington's Birthday Window that was an effective sales-maker.

The Bering-Cortes Hardware Co., Houston, Texas, made good use of this date to arrange a Washington's Birthday window, and at the same time call special attention to their Keen Edge line.

On an easel in the center was a life-size bust painting of Washington, and above it a framed picture of shield and flags. From these two pictures, to the floor and sides of the room extended twisted ropes of red, white or blue crepe paper.

What aroused the greatest interest, however, was a chopped down young tree, with the hatchet still remaining in the deep gash, which was placed in the foreground. Here, too, with edges imbedded in cork blocks were shown a number of specimens of hatchets and axes, each with a little price card attached.

The newspaper advertising of this firm was equally timely, and by its practicality caused the sale of many axes. It was adorned with the cut of a man with an axe over his shoulder and was headed:

AXES THAT CUT

are the ones to buy.

WE SELL THEM.

Even if the war is over, that is no reason why you should not conserve. Coal, like everything else, is scarce and getting scarcer.

Collect the scrap lumber and wood that is lying about. Chop it up and feed it to the furnace or the kitchen range.

Call on us for

Axes, Hatchets, Files, Saws and Saw Bucks.

The Ashdown Hardware Company, of Winnipeg, believe their sales windows one of the most effective methods of advertising.

Now that the coal shortage is being felt more and more, the suggestion that one purchase a hatchet or axe and use all the spare wood comes with special force.

Canada, of course, doesn't feature Washington's Birthday in February, but our Canadian cousins know equally well the value of concentrating on a single line, and a February tool sale conducted last season by the Ashdown Hardware Co., Winnipeg, Man., proved so successful that it should induce many other hardware men to go and do likewise.

Their tool window showed such an array of usable tools, in such attractive setting, that

every man who saw it longed to get one of the saws, planes or hammers into his hand. A canvas drop depicting the erection of a house was hung in the background. At one side stood a carpenter's bench, with a complete tool rack at one side, while scattered over the floor was a multiplicity of small tools. A card hung on the side wall suggested:

Take a day off to fix up things around the house and garage. Why not put in some of these cloudy, rainy, disagreeable days in improving the looks of your home.

If you have "Blank" tools the work will be a positive pleasure.

WE SHOW THEM AND SELL THEM

One of the catchiest ways of bringing up the sales of the tool section was that adopted by the hardware firm of Backus & Morris, Portland, Ore. The entrance to their store is a long V, with show windows on either side. At the head of this V is a large bronze owl, three feet high, which bears on its breast, in white letters, "Get Wise." Attached to the top of the owl's head is a glass topped box called "The Owl's Nest," the top of the box being of convenient height so that all who entered the store, or passed close to it could look into it.

Within the box was an electric light, that alternately flashed and disappeared, so that even the most unobservant had their attention called to the box. During their February tool sale there was shown in the box a single tool, with a card "Special price, this week only." The tool was changed every week, and each week the special for the following one was advertised, so that in the course of the month many new faces were seen in the store—being those who had come to purchase the tool that met their special needs. To all who came was given a little folder:

**AN HOUR IN THE MORNING BEFORE
BREAKFAST**

will put roses in your cheeks as well as in your garden. Our GARDEN TOOLS are of the most durable materials. Warranted to stand long and arduous service.

Inside were cuts of a number of garden tools and prices on all the standard implements, together with special discount when purchased in sets.

But while many purchases are made on sight a different method must be adopted in dealing with rural customers, who are in town only at rare intervals. The same applies to residents of nearby small towns, who probably come only once in several months. All of them are in the market for garden tools, however, if not for those of the household variety, and a crisp letter will interest and set them to think-

ing. It should be mailed well in advance of the time when these tools are needed. In fact, the best time to call garden tools to their attention is when the seedsmen are sending out their gaily illustrated catalogues. One of the leading hardware men of Sacramento tried out this plan to good advantage, his letter being brief, yet of a nature that at once suggested a consultation with the firm regarding garden seeds and tools:

Dear Sir:

An early start in the garden has much to do with the making of a successful crop. Before you can have produce you must have seeds, and before you put seeds in the ground it must be properly worked, and before you can properly prepare the soil you must have garden tools.

**A GOOD GARDEN DEPENDS LARGELY ON
GOOD GARDEN TOOLS**

If our present special prices on garden tools, seeds and fertilizers appeal to you, we will be pleased to see you.

Yours very truly,

BOWMAN.

**WHY UNIVERSAL TRAINING FOR CITI-
ZENSHIP, HEALTH AND NATIONAL
DEFENSE IS NEEDED**

Because we know

It will build up our health and strength.

It will unify our citizenship and wipe out the red flag.

It will instill respect, courtesy and consideration for others.

It will teach hygiene, care of the body and clean living.

It will Americanize our diverse foreign element.

It will produce higher types of citizens.

It will, authorities say, reduce crime 50 per cent.

It will bring understanding, tolerance and co-operation.

It will practically double our man-power.

It will lengthen and strengthen life and add to efficiency.

It will make us safe with a smaller standing army.

It is the only fair, square deal—equal opportunity and equal obligation.

It trains for service, but no service can be required except by act of Congress in case of war.

We have the cantonments and equipment.

The country needs it.

The people are ready and the boys are eager for it. Prompt action by Congress is necessary from every viewpoint. Make the cantonments great national training schools through the co-operation of the drill master and the school-master.

Why not? The American Legion endorses universal training.

The Winchester Sales Plan

NO ANNOUNCEMENT in recent years has attracted greater attention from the trade, both wholesale and retail, than the sales plan of the Winchester Repeating Arms Company.

Meetings and conferences with wholesalers and retailer are being held in all sections of the country, and the matter is being most thoroughly discussed at the various retail hardware conventions that are being held as this issue goes to press, and also during the present month.

The trade regards this plan of the Winchester Repeating Arms Company with much apprehension.

Recently the executive committee of the National Hardware Jobbers' Association held a conference with Mr. J. E. Otterson, president of the Winchester Repeating Arms Company, who discussed the matter quite thoroughly with the executive committee of the jobbers' association.

Secretary Fernley, of the National Hardware Association has issued a report of that meeting, which follows.

This, we believe, will enable the trade to obtain a very good idea of the plan the Winchester people have in mind. They frankly admit that it is an experiment on their part, and that their plans will be modified or changed to suit the conditions as they develop.

We are submitting this report issued by Secretary Fernley, believing that it gives both sides of the question as far as they have developed up to the time of going to press.

It is well known that the policy of the Winchester Repeating Arms Company heretofore has met with the approval of the trade, both wholesale and retail, and they have had their active co-operation and support for many years. Their changed views and policy is naturally a matter for discussion and the Winchester Repeating Arms Company doubtless welcome this as much as anyone else.

Secretary Fernley's report follows:

Mr. Otterson: The Winchester Co. proposes first to broaden its line of manufacture. We expect to manufacture a number of articles upon which we will put the Winchester brand and name. We will manufacture cutlery, skates, fishing tackle, flash lights and a line of tools.

Our production in this sense will, of course, develop gradually. We do not start out with a large production.

We have decided to sell these new products direct to a selected list of retail hardware dealers throughout the United States in towns less than 50,000 population and to offer them for sale in stores owned and operated by the Winchester Co. under the Winchester name in towns greater than 50,000 population.

We will not sell these new Winchester products generally to the hardware trade. We will not sell them to jobbers—we will not sell them to retail merchants other than our selected dealers.

They will be sold in only two places, viz.; Our own stores in the larger cities and our selected dealers in the smaller cities.

We will likewise sell our guns and ammunition direct to these selected dealers and through our own stores in the larger cities.

We will also continue to sell our guns and ammunition through the jobbers generally as we have heretofore if the jobbers will buy from us.

Our selected dealers will, therefore, have the exclusive sale in their town on all Winchester products with the exception of guns and ammunition.

Our exclusive dealers cannot buy from us any article of hardware except that upon which we put our name.

The large majority of our articles will be made in our own shops. There will be a few articles made in other shops which will bear our name, but which we are not prepared to manufacture ourselves, but which we are putting into our line in order to complete it.

It is not our present plan nor our future plan so far as we have any vision or idea to go beyond this in the matter of jobbing or competing with you jobbers. We are not going into the jobbing business.

I think, Mr. President, that is a brief statement of our policy.

Mr. Bihler: In connection with the brands of goods which you have taken over. Certain jobbers have been selling those lines for a great many years. I understand from your remarks that you will no longer market these goods under the old name, such as Barney & Berry Skates; Kendryx Fishing Tackle, etc.

Mr. Otterson: That was our original idea and may be modified. That depends a little on the jobbers' attitude toward us. If we do sell to the jobbers, these lines will be sold under their old names and not under the Winchester name.

Mr. Decatur: I would like to be informed by you if we are to be in a position to sell the retailer loaded shells, ammunition and arms at the same price as you sell the Winchester stores?

Mr. Otterson: Probably not—what our price will be to the selected dealers is, of course, a matter of determination. When we have our new plan in force we will be able to determine it—it may be that we can distribute at a lower cost than you do, in which event our exclusive dealers will have a lower price than some dealer in the same town would have to pay.

Mr. Decatur: We have come in contact with many of the men whom you have signed up. They have been impressed with what your solicitors have said to them that your policy in the very near future is to eliminate the jobber.

Mr. Otterson: It is not our policy to eliminate the jobbers on Winchester guns and ammunition. Whether we do or not, I think it depends more on you than ourselves. If our present plan is successful, it is our plan to continue it—if it is unsuccessful, it will probably be modified. Whether it is successful depends largely on your attitude toward us. I think there is still an incentive on the part of the jobbers to continue to sell Winchester guns and ammunition. The fact that we have gone into competition with you in this one particular, does not warrant the suggestion in our mind that you go out of the business.

A Member: What is the incentive?

Mr. Otterson: That there will still be a profit to be made and your customers to be served. We do not expect to eliminate the profit any more than we have in the past. We are not going to reduce your profits. We are going to sell you as we have sold you and as favorably as our competitors have sold you.

Mr. Bihler: Some of the gentlemen whom you have signed up are today buying Winchester arms within 5 per cent of your price to the jobber. Can the jobber afford to meet your competition?

Mr. Otterson: We have not solicited any business in guns or ammunitions from these selected dealers, as all our salesmen have instructions not to solicit any business.

I can give you this assurance that whatever mistakes we make, it is not our thought to conduct business at a loss. If it costs us more than 5 per cent they will be charged more than 5 per cent.

On the other hand, should it develop that we can distribute more cheaply than you can to these exclusive dealers, I think you will agree that it is an entirely sound plan on our part to do so.

Mr. Decatur: I would like to ask Mr. Otterson what he would do if he were in our place. You naturally would not distribute any merchandise at a loss?

Mr. Otterson: I recognize that the wholesalers have rendered a service to the dealers that we cannot render or do not propose to render. You have occupied in some instances paternal relationship toward them and I have not the slightest doubt but that the service you have given them is worth more to them than the service we can give them. I do not consider that under the circumstances like that, it is necessary for you to meet the price that we make to these selected dealers if that price should be lower than the price you would be able to make to your dealers.

I think your dealers will ask it and expect it, and I think under those circumstances that it is our duty and opportunity to explain to them the benefits which grow out of the services you have given them in the past and expect to render them in the future.

I think you will agree with me that hardware merchants throughout the United States—take any two or three in a given town—very frequently one of those merchants can buy goods at a lower price than any other merchant in the town can buy them. He continues business—he does not go out of business—if there is a demand for those goods, he carries them.

Mr. Bihler: For a number of years, the Winchester Co. have issued a schedule showing recommended prices at retail. Will your Winchester stores in cities under 50,000 population be required, under their contract, to strictly observe that suggested schedule, which heretofore has allowed the retailer a very fair margin of profit?

Mr. Otterson: I do not believe there is any specific clause in our contract with the retailer on that point. Our policy, however, shall be to use every influence we have to insist that those dealers generally maintain this suggested retail price, and we believe we will be successful in that matter. They are not going to operate cut price stores on the Winchester goods if we can prevent it. How far we can go you know better than I do.

Mr. Hulburd: I would like to ask the question as to just what idea is back of the new Winchester policy—is it the thought that the economic plan of distribution through the jobber is fundamentally wrong or is it because of the necessity of finding an output for a very large production which it was feared could not be distributed by the jobber?

Mr. Otterson: The first purpose was to find an output for the production of a factory which had been greatly enlarged and which could not find sufficient business in existing lines. We became convinced that we could not find distribution for it through the channels through which we had previously distributed our goods and that some other plan of distribution was desirable and necessary, and we devised this plan.

I believe that there is a place for the jobber, that there always will be in the hardware trade. I believe that he has a legitimate sphere of activity and nothing we can do will change that, and our plan has not that for its purpose.

I believe that our plan is economically more sound than yours. If we were to go into the general line of hardware with the idea of doing a general hardware jobbing business and were to travel salesmen to the extent you do, covering the territory as carefully and frequently and rendering to the dealer the kind of service

you render him, then I believe our cost would probably be as great as yours, but it is not our intention to do that.

I believe that a large manufacturer like ourselves, making a selected line of articles and selling them to a selected line of dealers, can distribute them more cheaply direct.

Mr. Hulburt: We have always pushed the sale of Winchester goods, and I think the question of incentive is one which is very important. If the jobber must go to the trade and admit that he is handicapped to the extent of 12½ per cent, how is he going to get anywhere?

Mr. Otterson: I should think that the number of dealers to whom we will sell guns and ammunition directly will amount to something less than 10 per cent of the dealers now handling ammunition. In other words, we sell 10 per cent—the remaining 90 per cent you have. We are not going to sell them directly.

Mr. Hulburt: I am simply seeking for information; the point is—is it fair to impose a handicap on 90 per cent of the trade for the benefit of the 10 per cent?

Mr. Otterson: I do not quite see how you can question the fairness of it—it is entirely legitimate.

Mr. Fernley: Mr. Otterson, will you allow me to ask you what your position would be if a jobber were willing to lose money and sell his customers at the same price you make the selected Winchester Stores?

Mr. Otterson: I do not know that there is much that we can do or that we would have to complain of in that manner.

Mr. Fernley: Mr. Otterson, it has been reported that at different meetings of retailers you have given the impression that the jobber is a parasite.

Mr. Otterson: I have never made the statement that the jobber is a parasite publicly or in private so far as I know. We have been quoted by the jobbers all over the United States as having made that statement. Gentlemen, I think you have a distinct service to perform. If you hear statements to the contrary I hope you give me the benefit of your doubt.

What I did say in Syracuse and Boston was I presented to them certain economic arguments to show that we could present goods to the retailers at a lower price by distributing directly than by distributing through the jobber.

* * *

Since that time we have dropped discussion of that character, and so far as I know in subsequent meetings we have not attempted to sell our plan to the dealers on that basis—to try to demonstrate the economic soundness. I regret this misunderstanding even if it has been somewhat misrepresented.

What we propose to make amounts to between 10 and 15 per cent of the business done

by the retail hardware merchants. If we take that portion of their business and build it up and stimulate it and increase its volume, I believe we will increase in other lines as well.

If we are successful in our plan, I firmly believe it is going to mean a larger volume of business to you as jobbers. I will be glad to see you get it. I am with you when it comes to constructively promoting the hardware business of the United States.

TO THE MEN OF AMERICA

(By Rose Trumbull, Scottsdale, Arizona)

You talk of your breed of cattle,
And plan for a higher strain,
You double the food of the pasture,
You heap up the measure of grain;
You draw on the wits of the nation,
To better the barn and the pen;
But what are you doing, my brothers,
To better the breed of men?

You boast of your Morgans and Herefords,
Of the worth of a calf or a colt,
And scoff at the scrub and the mongrel,
As worthy a fool or a dolt;
You mention the points of your roadster,
With many a "wherefore" and "when,"
But, ah, are you conning, my brothers,
The worth of the children of men?

And what of your boy? Have you measured
His needs for a growing year?
Does your mark as his sire, in his features,
Mean less than your brand on a steer?
Thoroughbred—that is your watchword,
For stable and pasture and pen;
But what is your word for the homestead?
Answer, you breeders of men!

If you want information, a special favor,
or help of any kind, get as near up to the head of the line as possible. The whippersnapper at the door will assume the airs of a grand duke. It's the big man who is kindly, interested, helpful, and genuinely intelligent. That's why he is the big man!

J. Ogden Armour, at a recent dinner, spoke in defense of the meat packers. Among other things he said: "Our enemies willfully misconstrue our statements. They misinterpret our motives as bad as the little child to whom the Sunday-school teacher said: 'Ethel, tell me something about King Solomon.' To which Ethel replied, 'King Solomon was a very rich king and very fond of animals.' 'Why do you think he was fond of animals?' asked the teacher in surprise. 'Well,' said Ethel, 'it says in the Bible that King Solomon had 900 wives and 1,000 porcupines.'"

Must Produce More and Talk Less

**Production, Not Phrases, Are Needed in the
Crucial Times of International Unrest**

(By W. A. Appleton, President International Federation of Trade Unions)

(Editorial Note: The following statement by the man who was recently elected at Amsterdam, President of the World's Federation of Trade Unions, is of the greatest significance at the present time. Mr. Appleton points out that phrases and catch-words are everywhere taking the place of production. Unless the world produces it cannot live. While the statement is made in regard to conditions in England, it applies everywhere.)

THE tragedy which threatens to overwhelm Britain proceeds in regular fashion. Gradually, but definitely, is unfolded the plot to bring misery upon the people in the expectation that misery may advance revolution and exalt the demagogues who would become autocrats.

There has been the battle of phrases, the avalanche of promises, and the sapping of moral fiber. Today there is the game of tactics between the revolutionaries who control the Miners' Federation and the Railway Workers' Organization. Tomorrow one may confidently anticipate the outbreak.

Circumstances follow each other with the regularity, though not the harmony, of a musical cadence. There has been preparation, now there is percussion, and tomorrow there will be resolution and revolution that may involve dissolution of the British Empire.

In the battle of phrases, even the government has joined. It has seen salvation in ninepence for fourpence, in acceptance of the demand that workers should be remunerated according to their desires, instead of according to their earning capacities, in the resuscitation of the discredited labor laws and conditions of Edward III. It has permitted and does permit fraud in high and low places to go unpunished or under punished.

The government is at a disadvantage in the battle of words and promises. It is expected to make good its utterances and fulfill its promises. This involves expense, and in endeavoring to raise the money with which to meet expenses, the government incurs opposition and unpopularity. So far it has met the situation by more words and more promises, and by the creation of an administrative machine which it estimates will, this year, cost one hundred and sixteen and a half millions! It has so far found no method of turning the developing tragedy into a drama with a happy ending. It has still no ascertainable policy.

Teachings of Economics Ignored

A few weeks ago an eminent Polish statesman asked me whether the men who formed the British government had read history or studied economics. I hastened to assure him that most of them had passed through the pub-

lic schools and the universities, and that, presumably, they were conversant with both subjects. "Then why in the name of greatness do they ignore the teachings of history and economics in their treatment of internal politics?" The answer to the supplemental question I was unable to give, and yet I do not know whether it is ignorance or incapacity or fear which prevents the promulgation and enforcement of a policy aimed at conserving the real interests of the empire.

The few men who frighten the government and mislead labor and through labor the whole empire, start their campaign with many advantages. They have, in the main to deal with an unthinking proletariat. They may enrich their promises with rhetoric's choicest ornaments; they may build not castles in Spain, but empires on formulae. They have no responsibility. They usually suffer from moral obliquity and constructive paralysis.

To demand rather than to provide is their metier. The consequences of these demands are either beyond their intelligence or without influence upon their consciences. They will cheerfully adopt and promulgate every panacea of the ancients or the moderns, and just as cheerfully discard and forget them. Whoever dies they live; whoever fails, they are triumphant.

It is no use analyzing intentions. A nation faced with strangulation can only deal with effects and the effects of the propaganda which these revolutionaries have fathered are culminating in disaster.

The Peril to the World

The friends of the men really responsible for the troubles in the mines and on the railways and in the docks may argue that all of them are altruists, but to the average man it seems very much as if their altruism was for abroad and not for home. Whatever their intentions, the fact remains that they have brought English industry into perilous circumstances and British workmen to the certainty of grave suffering and possibly starvation.

Faced with a restriction of output of coal and an inefficient and costly system of railways, faced daily with sporadic strikes, what will the government do? What will the nation do? The answer to the first question is easier to find than that of the second. The government will do what it has been doing since Mr. Asquith gave his fatuous advice to follow prices

with wages. It will temporize in the Micawbean hope of something turning up.

Salvation lies now, as always, with the nation. Upon the manner in which it faces the situation everything depends. Each individual must accept his own share of responsibility and perform his own task.

The flooding of mines and the cessation of work on railways destroys wealth and rots food. It is useless to talk of taxing wealth which chicanery and folly have destroyed, or of enjoying food which unreasoning railway men have left to perish. Every man and woman and child in Britain will have to pay for the past and current week's follies, and the poorest will pay most, because they will pay in actual suffering, while the well paid will only incur the disadvantages of straitened circumstances.

It is up to the individual to study for himself the economic situation and to act accordingly. He must learn to appreciate for himself the significance of imports £1,319,338,591, and exports £498,473,065. In effect this means that as a nation we are spending one shilling and three halfpence and earning a little less than fivepence. Our re-exports, too, have fallen from £111,737,691 in 1912, to £31,956,029 in 1918. And that in spite of existing inflated values.

These figures are like the pulse of the national life. They indicate grave derangements and almost certain catastrophe.

The state is often described as a ship. Today the ship is on a lee shore, and all hands must work at maximum speed if she is to be saved from utter wreck.

—Printer's Ink.

SALESMEN, MERCHANTS AND JOBBERS CONTEND WITH SELLING NON- ADVERTISED GOODS

The time spent by salesmen in "missionary" work, in introducing the unadvertised article on the false theory that the buyer is given the benefit "of a lower price because it is not advertised," is entirely erroneous.

It is well known that a manufacturer who is able to produce in quantity can sell far lower than the man who can only produce in lots of a dozen, or a gross, or a few hundred gross, depending upon the article.

Every jobber and salesman likes to have in his catalog articles that are advertised to the retail merchant.

Every manufacturer's representative knows it is far easier to sell a jobber or a dealer what he has seen advertised in the pages of his trade journal or magazine.

If you haven't any other use for the magazines you need to see them for the sake of examining the advertising pages to know what is being advertised in your line.

"MR. UNKNOWN'S UNADVERTISED LINE"

You've met him many times—this soft-spoken, camouflage wordstringer, with his "Come On" sales talk. He represents Mr. Unknown's Unadvertised Line and his bait is "larger individual profits."

"Oh, yes," he says, "we don't advertise our line, you know. No, indeed, we give the merchants all these profits." But he forgets to mention that every line to be sold must be pushed; and that when the manufacturer does not push it then the jobber or merchant must do all the "educating."

The suave, vaseline-coated representative of "Mr. Unknown's Unadvertised Line" doesn't mention that an unadvertised line lacks good will, established reputation and confidence. He forgets to tell you it's darn hard to sell his unknown, because unadvertised, line. He fails utterly to state that fully 90 per cent of the dead stock on merchants' shelves today is of the unknown kind.

He gracefully overlooks these all-important points and confines his talk to "my article is just as good," and attempts to dazzle his prospects with the bigger individual profit idea.

He thinks he is clever, this fellow, but he doesn't put it over so easily these days. Modern merchants are learning the value of gross profits, assured volume, good will, public confidence, established reputation and advertising co-operation.

They realize that even a possible 6 or 7% more individual profit on an unknown line they must push themselves doesn't amount to much when they can sell from 25 to 100% more of the advertised brands—and with much less effort.

THINKING IN BUSINESS

It's remarkable how few people outside of the old man who think in or about the business they're in.

Naturally the boss is chuck-full of the things that make his business pay.

But watch his associates come in.

The office kid arrives with a whistle and emphasizes his arrival by a slam of the door. He never stops to think of the trifling janitor jobs that could begin the day with a tidied up place.

Then comes the stenog. No one has it on her, as with a cherry "good morning" she prances to her quarters, where she hangs up her hat and wraps and then—

It's out with the mirror and the puff. She takes the wonderful God-given complexion that is the beauty heritage of every girl and fills up her face with tiny particles of clogging powder.

When she's made herself as artificial as possible, she's ready to start the work of the day, which she begins by running down the hall.

What time have girls, after allowances for dolling up, the lavatorial marathons, the personal telephones, the idle chattings, to think of things to do?

Like office boys, most girls require their work to be handed them at that, a piece at a time.

Now the bookkeeper is here. We haven't a word to say. He just can't help keeping quiet and methodical, painstaking and accurate. He travels in a well-worn rut. Let's not get him ambitious. He might quit and we'd have a dickens of a job to get another. Besides, he's good for a touch.

Here are the salesmen, glory be! But what a variety of clothes—and each esteems himself the cock of the walk. One smokes a fat cigar, and bangs it without regard to the possible presence of a customer.

Another stops to kid the stenog. Another sends the boy out for gum. There are some hawking of throats and blowing of noses. There's one who missed the cuspidor and put a nasty spot on the floor.

Then there's the last, but on time, the fellow who industriously checks up his calls for the day; asks for special advertising matter for new trade; inquires of certain stock and gets the condition of the shipping room. Advice is sought of the boss about handling some back order complications.

This bird thinks.

He lands the largest sales, his customers are glad to see him, he acts in spirit as if the business were his, but his manner is far from cheery.

He's a rara avis.

He furnishes service.

Because he thinks.

There's little need of having think signs around if the men, women and kids who constitute business organizations would take a tumble to themselves.

Thinking in business originates within, not by mandate from without.

There's little to be accomplished by training—all we can do is to grab the thinkers as best we can and replace the inefficient as opportunity occurs.

But—don't hang think signs around that may deceive the public with the notion you've a real service, unless you have it.

—Western Lumberman.

POSTOFFICE DEPARTMENT UNABLE TO PAY \$25 CLAIM FOR AN INSURED ARTICLE LOST IN MAIL

Insurance men who encounter the individual who maintains that the government is better equipped to handle insurance than the private companies might invite the doubter to take the following home and try it on his ukulele:

"Editor New York Sun:

"Dear Sir: You were good enough to publish some few months ago a letter from me telling of my unsuccessful efforts to get the Postoffice Department to give me some satisfaction in regard to an insured parcel post package containing a diamond stick pin lost in transit from Huntington to Castleton, N. Y.

"Senator William M. Calder took the matter up for me, and after persistent and determined effort he has at last, exactly one year from the date the pin was lost, received from the Postoffice Department the following letter which he has been good enough to forward to me:

"My Dear Mr. Calder: Referring to your letter of the 4th inst., you are informed that the claim of Mrs. Paula Henninghouse has been allowed for \$25, but payment cannot be made at this time as there is no money available for that purpose. A request for additional funds was submitted to Congress by the Postoffice Department, but the entire amount was not granted, and it is therefore necessary to await future action by the Congress toward providing an ample appropriation. Estimates for additional funds have been submitted. A warrant for the amount will be mailed just as soon as an appropriation is made by Congress.

"Yours very truly,

"W. J. BARROWS,

"Acting Third Asst. Postmaster."

"The Postoffice Department is still insuring parcel post packages without funds behind them as a guarantee. If a private corporation did such a thing how long would it be allowed to continue to receive money under false pretenses? Another thing: What has become of the tremendous surplus Mr. Burleson declared he had earned with his system?

"ADRIENNE M. HENNINGHOUSE."

MAKING THE CLERK WORTH WHILE

Time and again the complaint is voiced, "It's hard to get good clerks."

And coupled with this goes the further complaint that the clerks now-a-days don't seem to be at all interested in anything except getting their wages. Further coupled, if further coupling is legitimate, is a wish for the "good old days" when the apprenticeship system was in vogue.

As a matter of fact, I wouldn't like to say that the clerks of nowadays are deteriorating. Human nature is the same as fifty or seventy-five years ago, or a thousand years ago; and there will be, doubtless, good clerks and poor clerks till the end of time. And, whether they be good clerks or poor clerks will depend, as always, upon the clerk himself in part, and upon his employer in part.

There are now, as there always have been, salespeople who have gone into a particular line of business, not merely to earn a living, but because they are irresistibly drawn to that line.

There are born druggists and born hardware men and born paint men, just as there are born artists and born musicians and born poets—and born fools. These people are what they are because they couldn't be anything else on earth. And such people will make their own way—they don't seem to need much training.

Necessity of Training

But the great multitude of everyday people won't achieve their best without training and encouragement. And the employer who wants to see his clerks roused from indifference to interest must first of all throw off his own indifference and take a personal interest in them. The instinct of self-preservation, if nothing else, should inspire the employer to do this.

I know as a fact that in a good many stores new clerks are practically left to shift for themselves and to teach themselves the business. The process is something like this: Mr. Blank advertises for a clerk, bright and willing. A young fellow just out of school applies for the job. They dicker ten or fifteen minutes about salary, and then Mr. Blank engages the newcomer and turns him over to an older clerk to look after. Mr. Blank has meanwhile sized him up, and, perhaps, asked a few casual questions as to his education, parentage and the like; anyway, he regards the clerk as a fairly hopeful proposition. If he were utterly hopeless, Mr. Blank wouldn't engage him.

But from that moment on, Mr. Blank gives the new clerk practically no attention whatever except to scold him vigorously when anything goes wrong. And then he complains that clerks now-a-days are not worth their salt, and he pines for a return to the old-time apprenticeship system.

The Apprenticeship System Is Gone

and it can't return—not in America. It is incompatible with the spirit of the country. And if it were possible, and apprenticeship did again come into vogue, Mr. Blank would be one of the first and most vehement kickers. For, under the apprenticeship system, one of the outstanding requirements was that the employer or master take a personal interest in his apprentice. The apprentice became a member of his master's household, and received from his master personal instructions in his new trade. That, at least, was in the letter of the bond; and the results depended upon whether the letter of the bond was observed.

And that is what the clerk needs from his employer right now—personal attention and interest and personal instruction in his business. There is nothing, except indifference or pressure of other business, to prevent the employer giving his clerk this sort of training.

The average employer now-a-days loses money on his untrained help. A single Christmas season, when half a dozen inexperienced clerks have to be taken on, will convince any merchant of this fact.

The untrained man doesn't know the goods; doesn't know what lines yield the best profit and that, therefore, should be pushed; doesn't know the customers or how to approach them properly. It is only after he has learned the business to a certain extent that the new clerk is actually worth as much as his employer pays him. After a certain stage, he pays his employer a profit, and this grows as the clerk's experience grows. But as a rule, during the early training period of a new clerk, he doesn't earn for the employer what he actually gets in wages.

Pays to Give Personal Attention to Training Clerks

For this reason it will pay the man at the head of affairs to give his clerks his personal attention. No matter how pressing other business may be, he'll find it profitable to keep close watch on their work and give them encouragement and advice wherever needed.

There are, here and there, employers who go "snooping" about at all hours, perhaps in the fear that their clerks will abstract a few cents from the till; though the very few clerks that steal don't cause half as much loss to employers as the clerks who draw wages every week, that through lack of knowledge of the business, they don't earn.

It will pay any employer to give his clerks a great deal of personal attention. Not merely to criticise them when they do the wrong thing, but to encourage them when they do what's right. The employer's gospel should be a positive, not a negative, one. He should instruct in what to do even more than he should warn against what not to do.

There are many helpful ways of interesting the clerks. For instance, weekly or monthly staff conferences can be held to talk over selling experiences or to discuss the best methods of pushing seasonable goods. One merchant who employs three clerks makes it a point to have fifteen minutes personal chat with each of them every business day—forty-five minutes, daily, and that investment of time pays good dividends.

The wise employer will keep tab on the individual sales of his salesmen; or, even better, he will inspire them with the spirit of friendly competition it is only fair that credit be given records. Or, each clerk can be assigned a particular department and given the responsibility for sales in that department. In any form of competition it is only fair that credit be given for outside work, such as window dressing and collecting, as well as for actual sales.

DON'T WORRY

Under the title, "Don't Worry," a magazine publishes these words: "So far as is known, no bird ever tried to build more nests than its neighbor; no fox ever fretted because he had only one hole in which to hide; no squirrel ever died of anxiety lest he should not lay by enough nuts for two winters instead of one; and no dog ever lost any sleep over the fact that he did not have enough bones laid aside for his declining years."

Who, tell me, wants to be a bird with nothing to do but fly and pick for food and sit on eggs? Who wants to be a fox roaming about to devour and then be killed to furnish a skin for fur? Who wants to be a squirrel climbing trees, jumping from limb to limb, perching upon hind legs to eat a nut and amuse the children? Who wants to be a dog, petted or booted according to mood of master or mistress, fed and led at will of another, then dead for eternity?

No! I'm glad I'm a man with a mind and soul that lives and thinks and acts, that plans and works. I'm glad that I can help others and love others and be loved—I'm glad that I can do things, that I can work in this work-a-day world and help to make it a better place to live. I'm glad for family and friends, for opportunities and purpose, even if at times they do bring anxieties and sometimes sorrows. I'm glad that I can try to rise above these and grow to a fullness of life that shall mean joy in the eternal life to which we all are growing.

Have you ever thought that lots of your customers do not know a single thing about some of the goods which you are carrying? Why they do not even know that you carry some of them at all. Why should they? It's up to you.

A SUGGESTION TO USE IN YOUR ADVERTISING

Which figure is tallest? No, you're wrong. The policeman only looks that way against those narrow lines. Same way with cheap goods. The small price makes you think you're getting big value. Sight sense and saving sense are both deceptive. Beware of the "Just-as-good as —'s goods."

If desired we will furnish electros at cost to any of our readers.

PROMPTNESS

"When you've got a thing to say,
Say it, don't take half a day,
When your tale's got little in it,
Crowd the whole thing in a minute.
Life is short—a fleeting vapor—
Don't you fill the whole blame paper
With a tale, at a pinch,
Could be cornered in an inch;
Boil her down until she simmers,
Polish her until she glimmers,
When you've got a thing to say,
Say it, don't take half a day.

GUTS

(By Rufus T. Strohm)

The title of my verse, I fear,
May jar upon the cultured ear
And shock the squeamish and precise,
Whose speech is always over-nice;
But yet the simple truth remains
That, whether men have brawn or brain,
The thing that lifts them from their ruts
Is guts.

With purpose firm as adamant
It meets the coward's whine, "I can't,"
And in a voice emphatical
Declares the doctrine of "I shall!"
It turns the idler's "It may be"
To roseate reality,
And laughs with scorn at "ifs" and "buts"
Does guts.

It picks the fighter from the dust
In which he falls, and cries "You must!"
Till, heartened and aroused anew,
He struggles up and battles through.
It rips the planking from the floor
And bursts the oaken prison door
That Fate or Fortune coldly shuts—
That's guts!

LOSING INSURANCE MONEY BY DEPENDING TOO MUCH ON THE AGENT

(Copyright by Elton J. Buckley)

A veteran insurance man, who is good enough to commend some of these articles for business people, said to me the other day: "You couldn't do better than write something about the danger of depending too much on an insurance agent. The authority of all insurance agents is sharply limited. Some agents, for instance general agents, can do more than a mere soliciting agent, and bind the company, but the authority of every agent is limited somewhere, and if they make some promise or some agreement which goes beyond the limit, it is void and the company is not bound. The man who has relied on such a promise or agreement may lose all his insurance."

As a matter of fact, while he was speaking, some illustrations occurred to me which had occurred under my own observation.

My experience is that the average business man relies almost entirely upon his insurance broker or agent to keep him covered and safe. This is a very risky business, and thousands of dollars have been lost through it. If the agent is not a general agent of the company, he cannot bind the company, and even if he is a general agent, he cannot always bind the company. With insurance the only safe thing to do is to depend on nobody, but to keep after a given situation until you know that the company has knowledge of it and has passed upon it.

For instance, in one case which I know of, a man carried fire insurance on his store and its contents. A fire occurred at a busy season. He went to his local insurance agent, through whom he had placed the risk, and said: "See here, this thing is upsetting my business at the biggest season of the year. Can't you fix it up so that I can go ahead and repair?" The agent, accommodating like most local agents, went around, sized up the building, and said: "Go ahead and make a contract with the builder; it'll be all right." The owner therefore went ahead and placed his contract for repairs and reconstruction, spending considerable more money than he would have spent had he expected it would come from his own pocket.

Later when he sent the bills to the company, it repudiated them and refused to pay on the ground that he had filed no proofs of loss, as required by the policy, and that the agreement made by the agent was not binding on the company. Furthermore, the company said it intended to contest the claim on the ground that the merchant had persistently kept more gasoline on the premises than he had any right to do under the policy, and there was reason to believe that the gasoline was at least partly responsible for the fire.

The court ruled that the company's position was sound; that the agent had no right to bind the company with such a promise as he made, and that the company had a valid defense to the claim under the gasoline clause.

The merchant of course lost his insurance through double carelessness—first, by keeping too much gasoline without the company's consent, and second, by taking the agent's word for something that did not bind the company.

I remember another case involving the right of an insurance agent to absolve the holder of a policy from filing proofs of loss. In this case there was a fire and the local agent, who had placed the risk, went around and satisfied himself that the fire had occurred, also as to what the loss was. The insured thought—and the agent told him so, too—that it would be superfluous to file proofs of loss, since the company had had notice and its representative had actually been there. So he filed none within the time. The company later refused to pay on that ground and pointed to a clause in its policy that "no officer or representative of this company shall under any circumstances have power to waive any provision of this policy and any attempt so to do shall be null and void, and not binding on this company." Here, too, the company won.

In a third case a local manufacturer had gotten his fire insurance through a local agent. The policy expired and the manufacturer thought the renewal rate too high. He protested and dickered, the building being meanwhile uncovered. Finally he went to the agent's office and agreed to pay the asked rate. The agent said: "All right, I'll put it through right away and send you a bill for the premium in the usual way." The agent was suddenly called out of town that day and did not put it through. Before he got back, a fire almost gutted the manufacturer's plant. He thought himself safe until he came to look into it. The company refused to pay on the ground that there was no insurance on the plant at the time it burned. The manufacturer claimed that the arrangement between himself and the agent constituted a contract of insurance, and the only reason he did not pay his premium then was that for years the agent had renewed his policy and sent him a bill for premiums afterward. The court said that the company didn't make this arrangement and didn't agree to it, therefore it wasn't bound. The cold fact was that it had no policy on the plant at the time it burned and had not been paid for any.

The loss here was so heavy that it crippled the manufacturer for years. He could easily have prevented it.

There is a great difference between the authority of a general agent of an insurance com-

pany and that of an ordinary soliciting or local agent. General agents are authorized to accept risks and issue policies by filling out blank instruments which are placed in their hands for that purpose. They can also renew policies already issued, and when they do all this they bind the company. But the ordinary local or soliciting agent merely has authority to solicit insurance and submit applications to the company, or to the general agent. He cannot bind the company by any attempted acts or contracts in its behalf, not relating to the taking of applications.

The great difficulty you as the insured are in, is that you are bound to know pretty much what the agent's authority is. Lots of things will get by only so long as there isn't any fire.

Every business man should have such a complete accounting method that he will know for a certainty the exact condition of his affairs at all times. But it is not wise that his entire force be trusted with these facts, for many of them are no one's concern but his own.

HE WORRIED

He was one of the worrying kind—
Born with, I fancy, a worrying mind;
Worried whenever it threatened to rain,
Worried whenever the sun came again,
Because he was sure when the sunshine was o'er
He'd wake up to find it was raining once more.
He had a worrying look in his eye
And a worrying smile and a worrying sigh.
To think of his trouble and sit down and worry.

The children, they worried him sorely, indeed;
He couldn't afford to supply every need;
It gave him a horrible fit of the blues
To look at the holes in their stockings and shoes.
But all of the worrying this fellow did
Never purchased new shoes for feet of a kid;
They struggled along and they got on without
The garments he fretted and worried about,
And none of his worrying, early and late,
Every put any pie on a little girl's plate.

He worried because he was falling behind,
Good jobs were scarcer and harder to find;
Worried himself so he scarcely could sleep,
Because he'd a job he perhaps couldn't keep,
The longer he worried, the worse matters grew—
Each worry seemed to be followed by two.
Mountains of trouble loomed up in his way,
Bills kept on growing that he couldn't pay;
Got in a corner and couldn't get out,
Blocked by the things that he worried about.

Don't be a man of the worrying kind.
Don't be a slave to a worrying mind,
When you're in trouble (and none lives without it),
Don't sit and worry. Do something about it!
Get out and hustle and keep in the race,
Battle your cares with a grin on your face,
Worrying never has paid up a bill
Or lifted a mortgage, and it never will.
Life and its joys travel by, in a hurry,
The chap who does nothing but stand still and worry.

—Edgar A. Guest.

SHOW WINDOW SHORT SHOTS

Your show window will back up any form of advertising you use.

Co-operation between window displays and advertising doubles the effect of both.

In bad weather your vestibule is bound to be dirty—but each foot-print represents money-dirt. Just smile and look for more inside tracks. Janitor service is not expensive.

Your dollars multiply by action and transaction—keep your advertisements and windows working all the time.

A failure to please means a failure to sell—the store that has an up-to-date front well trimmed has half made a sale.

Through the heart, charity finds the way to a man's pocketbook. Business and increased sales knows the channel to the same place through the eye. Moral—Make your windows attractive.

The character of the store is revealed by the appearance of its show windows.

The faults of preceding displays can be rooted out—what has been considered good can be made better next time. No one wants his windows to be classed among the "also rans."

An expressionless face fails to attract—so does an ill-arranged, careless looking window display.

Your show windows are your most potent advertising asset. They are working for you twenty-four hours a day—doing their best to deserve their calling, the store's best silent salesman.

Treat your display windows as human, give them a good injection of "pep" every now and then to tone them up and give life to your store front.

A carefully arranged window display, like a well groomed man, reflects the presence of refinement.

No matter how many people pass your store daily, it is only those who enter who pay dividends—it's the turnover which counts.

Your display front is either a partition or a salesman. Which will you make it?

NEVER AGAIN

A girl, a great lover of nature, went to the seashore for a holiday, and approaching a typical fisherman, said:

"Ah sir, how well you must know the face of nature, and know it in all its moods. Have you ever seen the sun sinking in such a glare of glory that it swallows up the horizon with fire? Have you not seen the mist gliding down the hilltop like a spectre? Have you never," she went on, impassionately, "seen the moon struggling to shake off the grip of the ragged, rugged storm-cloud?"

"No, miss," responded the fisherman; "I used to see them things, but I'm on the water-wagon now."

A MIDWINTER INVENTORY

Tacks and Nails—
 and Garbage Pails—
 Carpenters' Tools—
 and Canvas Stools—
 Hooks and Eyes—
 and Plates for Pies—
 Hoes and Rakes—
 and Pans for Cakes—
 Wire Netting for Screens—
 and Pots to Bake Beans—

 Holders for Towels and also for Flags—
 Umbrella Holders and Shopping Bags—

Any merchant may obtain trade rhymes similar to this on any allied subject on application to the author at Mt. Hope Place, Bronx, New York.

MY NEW STENOGRAPHER

I have a new stenographer—she came to work today,
 She told me that she wrote the Graham system;
 Two hundred words a minute seemed to her, she said,
 like play;
 And word for word at that—she never missed 'em.
 I gave her some dictation—a letter to a man,
 And as I now recall it, this is how the letter ran:
 "Dear Sir: I have your favor, and in reply would
 state
 That I accept the offer in yours of recent date.
 I wish to state, however, that under no condition
 Can I afford to entertain your free-lance proposition.
 I shall begin tomorrow to turn the matter out;
 The copy will be ready by April 10th, about.
 Material of this nature should not be rushed unduly.
 Thanking you for the favor, I am, Yours very truly."
 She took it down in shorthand and with apparent ease
 and grace;
 At last, I thought, I have a girl worth keeping 'round
 the place.
 She didn't ask me to repeat nor jump up in a flurry,
 I said, "Now go and write it out, but don't be in a
 hurry."
 The Oliver she tackled—now and then she hit a key,
 And after thirty minutes, this is what she handed me:
 "Dear Sir: I have the fever, and on the fly I sit,
 And I accept the offer as you have reasoned it.
 I wish to say, however, that under no condition
 Can I for to take of your free lunch proposition.
 I shall be in tomorrow to turn the mother out.
 The cap it will be red and cost \$10 about.
 Material of this nation should not rust. N. Dooley.
 Thinking you have the fever, I am, Yours very
 truly."

THE HUMBLE .22 COMES INTO ITS OWN

Not so many years ago the .22 caliber rifle was spoken of by shooters as a "cat rifle" and its use was limited mainly to small game hunting by boys and by men merely as a game getter around camp.

During the last few years there has been a very decided change in the attitude of shooters toward the .22 calibre rifle, for experience has shown that the .22 long rifle cartridge is capable of as fine results for target shooting, up to 200 yards, as any of the larger cartridges and in fact groups closer than a good many of them.

Twenty-two caliber rifles have a very light recoil and consequently almost anyone finds it easy to learn how to shoot one without flinching. As practice with the smallbore is continued, the proper method of carefully squeezing the trigger without worrying about the recoil becomes so much a matter of habit that when the shooter does take up high power rifle work, there is no tendency toward the sudden tightening of the muscles, just before the discharge, which is known as flinching.

Low Unit Prices Mean More Sales

In these days of high prices a big feature of small-bore shooting is the very small expense connected with it. An afternoon at the targets with a .22 calibre rifle costs but little, to say nothing of the advantages of outdoor recreation which is recommended by all doctors.

Scattered all over the country there are thousands of smallbore clubs. Newly organized clubs are being added to the lists daily, in fact, this tremendous growth conclusively proves that smallboring is a worth-while sport.

The enterprising merchant who handles metallics and arms at present can testify to the quickened sales in smallbore rifles and ammunition. A great opportunity exists here. Present sportsmen can be supplied and new buyers may be enthused and interested by the resourceful salesman.

TWO GOOD REASONS FOR A NUDGE ABOUT PROMISSORY NOTES

(Copyright by Elton J. Buckley)

Two incidents have combined to persuade me to say something in this article about the great care which every business man should take not to sign any printed matter whatever without knowing what it contains and what it means. The first incident is the fact that the Federal Trade commission has begun prosecution against a business-booming scheme in Iowa City, Iowa, which habitually induced retail merchants in various lines to sign papers which its solicitors represented were mere "acceptances," but which turned up several weeks later as promissory notes in the hands of a third party, who could legally collect them. Hundreds of these notes have been collected by alleged strangers to the original transaction, although in nearly every case the maker of the notes had the best kind of defense against the concern he gave it to, viz.: failure to do the things which the notes were given as compensation for.

The second incident was the receipt of the following letter from a retailer in Michigan:

I am afraid that I have got myself in trouble, and thinking that the information from you might be more reliable than I might get from the lawyer here am writing you.

There have been some parties who have claimed to be making a geological survey of the country and they have had some soldiers to help them. They have driven by my place several times with their instruments, so they appeared to be all right.

Several days ago one of them telephones from the hotel to ask if I would make him some cement posts, and the next morning he came down and brought metal castings marked "U. S. Geological Survey," to have embedded in the top of the posts. Later he stopped in once or twice to see if they were suitable to handle.

About a week ago he came to me and paid for the posts (\$2), stated he was called away and would want me to store the posts a short time and that it would be necessary for me to sign a paper so he could make a report and get his money. Said it was necessary for me to sign two, as he had to send one to the general government and the other to the state. I looked the first one over and could see no chance for trouble in signing it, and supposing the other to be just the same, they being in a narrow blank book, opening at the end, and not in the form of a note, I signed both without looking at the second, only the printing at the bottom. I see by the paper that the same scheme has been worked in other places, and later a note has turned up for from \$350 to \$800, and as I think over the action of the party, I feel sure that this will turn out the same trick.

In case there is a note turns up, is there any way out except to pay it?

I have notified the banks here, also the sheriff. Neither appears to think it serious, but I do. I cannot realize why I was so careless as to sign the paper without looking it over and more closely, except that I am badly crippled from rheumatism, hardly able to get out of a chair and do not get much sleep, and when they came to me was nearly asleep in my chair and did not use proper judgment.

J. H. C.

It is literally true that this correspondent may be mulcted of every cent he has through his carelessness in signing this paper. The

tricksters who victimized him can just as easily fill in \$8,000 as \$800, and if they can induce somebody to discount the note, or buy it, that person can collect every cent of it from this correspondent. I have worked very hard in the last few years to show business men as a class that promissory notes are loaded. And of course, so is the practice of signing things that you don't read over first.

In Michigan, the state this inquiry comes from, and most other states, there is now in force what is known as the uniform negotiable instruments act, that is a standard law which nearly all states have passed to make the law uniform. One of the provisions of that act is this:

A holder in due course holds the instrument free from any defect of prior parties and free from defenses available to prior parties among themselves, and may enforce payment of the instrument for the full amount thereof against all parties liable thereon.

This is done in order to make notes, bills, checks, etc., freely negotiable, so they will circulate from hand to hand almost as easily as money. Suppose A makes a promissory note and gives it to B. B endorses it to C and so on until it finds its way into the hands of J, the tenth holder. J then brings suit on it. If it were possible for A, or some of the prior endorser to raise a defense which they may have had against other parties on the note, or if A could defeat J's suit by raising a defense that he had against B, you can see that nobody would have anything to do with negotiable paper, because you could never tell if it was good.

The law therefore says that A can raise his defense only as long as the note stays in B's hands. If it leaves B and gets in the hands of a third party who pays something for it and knows nothing about A's defense, A is helpless when such a party demands payment.

Under the established law, A has only one chance: If he can show that the holder of the note, who now sues on it, is a bona fide third party holder who has paid value for the note and was ignorant of A's defense, but merely a stool pigeon for the person to whom the note was originally given, then he can of course raise his defense against the stool pigeon just as he could against the original payee. But that is a slim chance, especially if the parties aren't all in the same town.

A RIOT IN GRAMMAR

He went into the shop to buy a comb. He was a man careful of other people's grammar, and believed himself to be careful of his own.

"Do you want a narrow man's comb?" asked the assistant.

"No," answered the careful grammarian, "I want a comb for a stout man with tortoise shell teeth."

**JAMES E. CARSON**

Secretary of the Ohio Retail Hardware Association, whose convention will be held at Cincinnati February 25, 26 and 27, with an exhibit in the Gibson Hotel, believes that if there was ever a time when merchants should attend their annual convention, 1920 is the year, and as far as the officers can do so, the Buckeye dealers will have the most enthusiastic gathering they ever held.

**P. J. JACOBS**

Secretary of the Wisconsin Hardware Dealers' Association. No secretary is more attentive and alert to the interests of the membership than P. J. Jacobs, and the confidence which the entire trade have in him is manifested in the harmony that prevails in the association and what they have been able to accomplish. Secretary Jacobs will be able to give a most excellent account of his stewardship at their convention February 4, 5, 6.

UTILIZING SPARE MOMENTS

An enterprising Western merchant turns slow times to account by having his clerks put up in packages of the most salable sizes, the various lines usually sold from bulk. These include such goods as nails, kalsomine, whiteing, Venetian red, yellow ochre, etc., also paint and lubricating oils.

Cartons upon which are printed some good advertising for the firm are used for the nails and bulk colors. Bottles are used for the oils in quantities running from pints down to quarter pints and quart, half gallon and gallon cans are used for the larger quantities. These cans are picked up from painters, cleaned up where necessary and properly labeled.

These goods when packaged up are arranged neatly on shelves and in other places where they can be quickly reached in a rush time. This dealer states that the way this has helped to speed up service when the store is crowded is amazing.

He has also tried putting up rope in handy form for quick service. The lengths running 25, 50, 75 and 100 feet. This, too, has proven helpful. This dealer also makes up all his halter leads.

Be polite to your patrons, but don't slop over and be effusive and gushy. Maintain just a little dignity in your courtesies.

FOREWORD ON NAIL SITUATION

In an article appearing in our last issue entitled "Nail Famine in the United States," written by Mr. A. C. Rulofson, well known manufacturers' representative on the Pacific Coast, it was suggested that the trade need not be surprised if they found a new list of nail extras adopted by American and Canadian manufacturers who have found that the present extras on small sizes of wire and coated nails made an actual loss.

As we go to press with this issue it is rumored on good authority that the independent manufacturers have adopted a new schedule of extras much higher than the old one. One large eastern buying syndicate has issued a bulletin that the new card was now in use. This statement has not been confirmed officially as yet, but it is well for the trade to be prepared for what is coming.

There is nothing in the open market which will bring more money than a genial smile. Some people are so chary of their smiles that they cannot have very many in stock. Funny thing about smiles! They are mighty like sweet peas and pansies and some other fragrant flowers. The more you pick and use, the more grow in their places. Get the habit!

Why isn't prohibition a beer check?

Here's the Answer

*-the No. 92
Plug Cluster*

Millions of electrical appliances are going into homes where there is a shortage of electrical outlets.

The single wall or base receptacle or the already occupied lamp socket must be supplemented. Here's the answer—the Benjamin Two-Way Plug, the No. 92 Plug Cluster.

Back of the genuine merit of the No. 92 is the industry-old reputation of the house, a brilliant publicity campaign in 31 magazines of national distribution and a most effective group of dealer helps.

In all national advertising the idea of buying three at a time is emphasized, and the cartons, the counter and window displays feature this. Here's an opportunity to make friends for your store and a profit at the same time.

BISSELL'S *New Light-*

Lighter, Really Easy to Run, Greater

New Principles—

AN ANNOUNCEMENT of radical, even revolutionary improvements on an article that has already reached a leading position is of more than ordinary import. So this announcement of Bissell's New Light-weight Vacuum Sweepers is one to challenge your serious attention.

The new machines effectually overcome all objections of weight or difficult operation, and open the door to the big market for a vacuum sweeper that is light to handle, really easy to run, that has the cleaning efficiency of a good electric and is low in cost.

Here are some of the new features, (Patents Applied for):

The whole machine is shorter, lower and lighter but with the same nozzle width; the "Superba," for instance, is $1\frac{1}{2}$ inches shorter, $\frac{1}{2}$ inch lower and about three pounds lighter, while the remaining weight is better distributed, resulting in a more perfect balance. This and specific changes of construction outlined below, make the sweeper even easier running than the saving of sheer weight alone would accomplish.

This Shows the Angle and Action of the New Bail—It Changes the Downward Pressure to a Straight Forward and Back Motion

The new bail is a decided step from the beaten path. It changes the direction of the thrust on the handle from oblique to horizontal—straight forward and back. No effort is wasted either in futile pressure on the downward stroke or in a lifting action on the return stroke. In fact, it protects the user against her own misguided waste of effort by defeating a woman's natural propensity to press down on the handle. It is almost impossible to do that with this new bail. That means easy, even action of the sweeper at all times.

In the construction of the nozzle an old established principle of hydraulics has been applied to secure greater suction and easier air passage.

The bellows have been changed in a way that contributes to a greater suction as well as lessening operating resistance.

The dust receptacle in the new models is almost indestructible because of the new design of parts and method of assembling, which combines electric welding, lap joints and gluing—each reinforces the other. The edges are metal covered to prevent any fraying of the filter fabric and the whole is securely anchored to the nozzle.

weight Vacuum Sweepers

Suction Than the Average Electric

New Sales Possibilities

And it is not only in the principal parts and fundamental functions that great improvement has been made—there is hardly a detail that has not been changed for the better, as for instance, a nozzle lock of new design which is even more convenient and secure than previously; the vacuum box is so constructed as to further insure against leakage of air; simpler and better bail locks; “Nulo” oilless main bearings.

All in all, Bissell's New Lightweight Vacuum Sweepers are really the first vacuum sweepers that run nearly as easy as a carpet sweeper and clean fully as well as an electric. Such a machine will sell. Now the home without electricity or with the more slender purse, can enjoy the same cleanliness as its more fortunate neighbors, and without any great expenditure of energy either.

These new Bissell models are a revelation in lightness, easy running and cleaning ability, and wise merchants will not let any early prejudices stand in the way of looking into the possibilities of this new line without delay.

The new vacs make a wonderful demonstration—a slow stroke or two over the carpet on which dust has been sprinkled leaves a bright trail. In fact, these new Lightweight Vacs work best at a slow, easy gait—about thirty complete forward and back strokes a minute.

Bissell's New Lightweight Vacuum Sweepers will be advertised this spring in the leading National Periodicals and in the Rotogravure Sections of several Sunday Newspapers, each influencing a wide trading radius, beginning with April issues, many of which are on the newsstands by the middle of March.

Why not crystalize the resulting interest, active and passive, into sales by having the goods and letting your customers know it. New show cards, newspaper cuts and circulars with shipments of the new sweepers.

**W. C. COLE**

President of the Missouri Retail Hardware Association, whose annual convention at St. Joseph, Mo., is sure to bring together a large number of merchants, not only in Missouri, but in adjoining states of Kansas, Nebraska and Iowa. It has been a long time since St. Joseph entertained a hardware convention, and the dealers, manufacturers and jobbers are going to do everything they can to make this the best convention Missouri has yet held.

**F. B. LOMAS**

President of the Iowa Retail Hardware Association. Iowa merchants are alive to the importance of this convention as never before, and President Lomas says it is going to be the best meeting that Iowa has ever had, and that means a great deal. He wishes us to urge the retailers of Iowa and adjoining states to be out in full force.

REMINGTON SALES POLICY

In a statement to the trade to open the New Year, C. L. Reiersen, vice-president of the Remington Arms Union Metallic Cartridge Co., has covered thoroughly the situation with that company and its pledges and policies for the coming year.

The company reaffirms its previously stated intention to adhere to the previous well-known policy in selling its entire product through the jobbing trade. In regard to filling orders the statement affirms that it can assure the trade that there will be sufficient arms to supply all demands during 1920.

Directly following the war the organization of the company necessarily was dissipated because of the tremendous fall off in its business after the war orders ceased. Now the organization has been built up again, and unless there is an unforeseen dearth of supplies in raw material the company is well prepared to handle its trade this year.

Prices for 1920 will be higher on practically all if not all models and have been announced by now. The prices on loaded shells and ammunition will be practically the same as those existing, with a guarantee against decline throughout 1920. The following is an extract from a definite statement from the company.

"1. We are not preparing and have not in contemplation any plans for the manufacture or distribution of any general line of hardware, the only new product now in process of manufacture, or even contemplated, being cutlery.

"2. We have no connection, or plans for any connection, with any organization of retail stores of any nature whatever in any line.

"3. We are on record with the National and Southern Hardware Jobbers' Associations and, through the latter first above referred to, with every jobber with whom we enjoy relations, to the effect that all

products of this company now being manufactured and any new lines to be manufactured in future suitable for distribution by hardware jobbers will be marketed in the future, as in the past, entirely through jobbing channels. We believe jobbers can distribute our product more economically and thoroughly than is possible through any other means, and it is our intention to co-operate to the fullest extent with our jobbing distributors towards securing the greatest possible volume of business on our product.

BE THE BEST OF WHATEVER YOU ARE

If you can't be a pine on top of the hill
Be a scrub in the valley—but be
The best little scrub by the side of the rill;
Be a bush if you can't be a tree.

If you can't be a bush be a bit of the grass.
Some highway some happier make.
If you can't be a muskie then just be a bass—
But the liveliest bass in the lake!

We can't all be captains, we've got to be crew,
There's something for all of us here.
There's big work to do and there's lesser to do,
And the task we must do is the near.

If you can't be a highway then just be a trail,
If you can't be the sun be a star;
It isn't by size that you win or you fail—
Be the best of whatever you are.

—Doug. Malloch.

The only difference between the difficult and the impossible is that the impossible takes a little more time.

NEW MILLERS FALLS PRESIDENT

Kingman Brewster, formerly vice-president and general sales manager of the Greenfield Tap & Die Corporation, Greenfield, Mass., has resigned to become president of the Millers Falls Company, Millers Falls, Mass.

KINGMAN BREWSTER

Mr. Brewster has been a prominent figure in the hardware and mill supply trade ever since he became associated with the Greenfield Tap & Die Corporation in 1918. Previous to this he was a successful lawyer in Springfield, Mass., having charge of legal work for a number of New England corporations. His active career as counsel for these interests led to his being made vice-president of the Greenfield organization and he immediately set about to complete the reorganization of the sales force and the building up of many essential merchandising features within the organization.

Mr. Brewster has attained unusual success for a young man. He is well under forty and possesses an untiring ability for hard work. He has a reputation for having chosen unusually good salesmen and many field representatives of the Greenfield Tap & Die Corporation owe their selection to his good judgment.

Mr. Brewster's advancement to become chief executive of a large industry is the direct result of his aggressive study of merchandising and manufacturing methods in the tool field. He has traveled extensively throughout the country, knows the trade outlets thoroughly and is well qualified to direct the merchandising interests of the Millers Falls Company, with which he is now associated.

It doesn't require much capital to carry always enough change to accommodate customers and others who want to get a "five" broken, and capital so used brings a return in good will and less items put on the books.

The year's net profit on the business will always be larger if you keep the stock down to the lowest efficient mark instead of up to the limit of what you can carry. Buy early and often.

TRADE LOSES LYMAN TREDWAY

A sudden and vital loss was suffered by the hardware trade last month when Lyman H. Tredway, president of Peck, Stow & Wilcox Co., died in Cleveland, after an illness of but one day. The cause of his death was heart disease, and his condition was not believed critical until a short time before he died.

Mr. Tredway had just rounded out an active career of forty years in the hardware trade at the time of his death, for his first connection was in 1879, when he started with the old Wilcox-Tredway Co., in Cleveland, as a packer, his father at that time being president of the company.

L. H. TREDWAY

Growing with the Cleveland concern, he saw its amalgamation with the Peck, Stow & Wilcox Co., and in 1911, at the retirement of his father, Mr. Tredway became president of the company. Although the direction of the hardware manufacturing business was Lyman H. Tredway's main activity for the greater part of his life, he found time for a variety of other connections and interests.

He was vice-chairman of the Federal Reserve Bank of the Fourth District at the time of his death, and also a director for the Superior Savings & Trust Co. and a trustee of Western Reserve University. He was the past president of the Cleveland Chamber of Commerce, and has been an officer and director of numerous Cleveland clubs and charitable institutions. He was a 33d degree Mason and a member of many clubs, societies and associations.

Mr. Tredway is survived by his widow and a son and daughter, both of whom are in school.

If you have goods in stock on which you must follow the market if it goes down, no man can honestly accuse you of profiteering if you follow the market when it goes up.

Don't send a cheap clerk with no tact out to collect bills. Collecting is a job that calls for the best intelligence if you are to retain the good will of the credit customers.

The Air-Way Electric Cleaner

Ready for
Immediate Delivery!

See What the Air-Way Handle Does for Her!

Would milady like to quickly remove the dirt from all those hard exasperating places?

From the corners, under radiators—from portieres, walls, window frames, mouldings, pictures, mattresses and tufted furniture?

Then she simply picks up her Air-Way and uses the handle just like the illustration. The Air-Way is so light that a child can carry and operate it.

A Real Sales Opportunity No Other Cleaner Like It!

On rugs, carpets and floors she uses the Air-Way just like any other cleaner—but on the hard out-of-the-ordinary places the handle does the whole job for her.

No waiting to put on cumbersome attachments—not a bit of bother. She just turns the indicator arrow toward the handle and in a few minutes the Air-Way has cleaned the house.

There is no other cleaner like the Air-Way—none which makes such an instantaneous appeal to the housewife. Distributors and dealers who handle the Air-Way get into big profits quickly because they can make a demonstration which *immediately* marks the Air-Way as delightfully different from every other cleaner—and decides the sale on the spot.

Value of Demonstration

**Hardware Merchants Should Realize No Other
Line Offers Greater Opportunities**

WHAT is it that attracts the crowd to a street salesman? Nine times out of ten, it is not what he is saying, but rather what he is doing!

How much quicker will you stop to see a window display in which there is something moving, "something doing," than one in which the goods are merely placed in position, no matter how attractively arranged.

You have gone into a store to buy a collar or a tie, and did you notice the salesman, if he really was one in fact, deftly place the collar or tie in position to give you the effect of how it looks?

At the fair or circus, have you not been attracted by the street fakir, who was in action, even if it be no more than cutting a piece of paper with scissors?

Why is it that department stores find that displaying their goods over living models attracts more attention than over the mere papier mache forms?

The Salesman Jumped Up and Down Vigorously to Show the Power of the Springs.

Did you ever go into a furniture store to purchase a mattress and see the salesman jump up and down vigorously to show the power of the springs?

Did you ever purchase a fountain pen and fail to see the salesman demonstrate the quality of the feed by drawing long vertical lines?

Have you not noticed a salesman with nothing more than a piece of cloth, snap it to show its strength as a demonstration?

Isn't the orator or the preacher doing his utmost to "demonstrate" when, instead of reading his address, he is putting some action into his delivery, even if it be nothing more than walking up and down the platform?

Human nature is the same whether it is purchasing a tie, a pen, a suit, a bedspring, a plow or any article in fact. It is human nature to stop and see what is doing, or "how it will work."

The implement dealer is in a particularly fortunate position to be able to demonstrate practically every article he sells.

Does It Take Too Much Time?

But isn't it far better to take a little time to interest your customer and make a sale, than it is to spend half the time and let him walk out to buy somewhere else?

As a matter of fact, demonstration, or a lack of it, is responsible for the success or failure of far more merchants than you realize.

If you could have installed in your store or warehouse a sample of every article of merchandise you sell, and show your prospective customers just what it will do, what use it may be put to, how it will look, or what purpose it will serve, your sales would doubtless increase 50% and in some cases they would be doubled.

Use Your Knowledge of Human Nature

The average merchant does not really need to be told to what use his goods should be put. He knows.

We know one saw manufacturer that uses a figure operated by a clever mechanism to give the appearance of sawing a board, and although every hardware merchant and everyone who can see knows the uses to which a saw can be put, yet you always find a crowd around such a demonstration.

Other merchants show a hatchet or an ax stuck in a block of wood, and there are one or two live merchants whom we know, who, in making an ax or a hatchet sale, have a boy in their window using them on splitting blocks.

Silly, do you say? Yet is it silly if it draws the crowd, if it makes sales? It is true everyone does know, but simply because people "may know" is not sufficient to move your stock.

Why is it that stove manufacturers find it well to demonstrate to the women folk of their community the baking of bread or pies or cakes. Surely a woman who uses a stove two or three times a day knows what a stove will do, but nevertheless such demonstrations materially increase sales.

Study the Methods of Department Stores

Demonstrations are becoming more universal. People like to see "the thing in action," even though they know just as well as you what it is intended for.

A farmer, of course, knows just what a plow will do, and yet when a new plow is placed in the ground and he can see just how well the work is done, more often than not, he will not let the plow be taken away, although he may have something just as good. The newly

The old, old story of AC dominance was retold at this year's New York and Chicago Automobile Shows. A census taken of the passenger cars and motor trucks on display showed that more fine cars were equipped with AC Spark Plugs than with all other makes combined. The dealer takes no chances in stocking a line that has the endorsement of the leading automotive engineers of the country, or in recommending and selling spark plugs that are used as standard equipment on the leading makes of automotive vehicles. That line is the AC. Concentrate upon it. Write today for complete dealer information.

WINCHESTER

NEW PRODUCTS AND A NEW POLICY

by J. E. OTTERSON

PRESIDENT WINCHESTER REPEATING ARMS COMPANY

WHEN we decided to branch out into the manufacture of other lines of products, we were not satisfied that we ought to put the name Winchester on Cutlery—Tools—Skates—Fishing Tackle—Flashlights.

Here was a name which had come unblemished through fifty-three years of the cleanest kind of business dealings.

Some held that it would lower the prestige of this

name—that we would destroy its significance—if we applied it to more than one line of products. This was given no small consideration.

We wondered if it would not perhaps be better to put these new products out under a new name, such as “Eagle,” or “Victory,” or something similar.

We have finally decided to call them Winchester. And to make this name mean everything it now

means on Guns and Ammunition.

We will not put this name on any product until we are sure that the *quality* is such as to entitle it to be stamped with the name.

And so when an article is handed you with Winchester upon it, it will carry our assurance that it is up to Winchester standards.

When we decided to establish a series of local retail agencies, it was a very great question whether we should let dealers throughout the country put the name of Winchester on their stores. We determined not to give this privilege indiscriminately.

We have picked out a responsible dealer in each town and offered it to him. And we do not want him to take it unless he appreciates it, and takes the responsibility that goes with it.

If he feels that he can make the Winchester Store stand in his community for fair, honorable, clean-cut

business dealings, then we want him to come into this proposition.

On us rests the heavier responsibility of maintaining the prestige, significance, and high standing of the Winchester name in the actual *manufacture* of these new products.

It is with greatest confidence in Winchester artisanship, in Winchester methods and Winchester manufacturing *purpose*, that we have taken this momentous step.

In committing the Winchester organization to the making of these new products to bear the Winchester name, and in extending the use of that name to retail stores, I personally have assumed a great responsibility to the American people.

I feel this obligation keenly.

My confidence in receiving your approval is secure — knowing all that Winchester has done and can do.

WINCHESTER

painted appearance, the looks of the bright shiny surface, appeals to him in the same way, far more than the rusty, weather beaten one that he has lying around in some corner of his field.

Tractor manufacturers have recognized the value of demonstrations, and instead of one big demonstration, they are now coming to see that where they can give private or local demonstrations, where they can get a man's undivided attention and show just what it will do in his own field or orchard, that the sale is generally half made.

Sales Are Made by Suggestions

If the average merchant would go through his stock and take two or three articles each week and demonstrate them, even though it be such a simple thing as a boy whittling a stick, or chopping a block, or sawing a board, people will stop and look; it will remind them of things they need.

The boy whittling will at once suggest to the passer-by to feel in his pocket and see what his knife is like. The woman will instantly compare the work of her stove or old style washing machine with what the new models will do.

The farmer will feel that he could probably accomplish his work in less time and obtain larger crops by using the up-to-date implement, and so on throughout practically the entire list of what the hardware and implement merchant carries.

We have seen it proven time and time again, and yet the average merchant, because he is located in a small town where such things are not usually being done, feels that while these methods might be all right for large cities, yet it is not necessary in his own community.

That is all the more reason why he would obtain better results and get a name for himself of being progressive and up-to-date if he would put in effect this element of human nature, which is the same in the country town as it is in the larger town. It applies equally well in the small store as it does in the larger.

ROADS ALL GOOD—ONLY "DETOURS" ARE BAD

It was during a recent Congressional investigation that Commissioner Garfield remarked:

"Their findings remind me of an encounter I once had with an Illinois farmer. We had stopped at his place for dinner and I ventured to inquire how the roads were in his district.

"Fine," replied the farmer. "We've abolished bad roads."

"Big job, wasn't it?"

"Not at all. Wherever the going is 'specially hard, we don't call it a road. We call it a 'detour.'"

H. S. DANIELS

President of the Illinois Retail Hardware Association, extends through our pages an invitation and a welcome to dealers in Illinois and adjoining states to attend their annual convention and exhibit, to be held at Hotel Sherman, Chicago, February 17, 18, 19.

JUST BECAUSE IT'S SOMETHING NEW!

The success of any industry has always attracted ambitious "seconds" ones who hoped to get by on the coat tails of success—if, from their present endeavors, their eyes behold a flourishing industry, be it oil, gold or rubber, off they are on the new scent with a wealth of visionary, revolutionary and ambitious thoughts and ideas that are astounding.

The automobile industry is an example that is fresh in our memory—recall the countless contraptions thrown together feverishly with the one idea of getting in while the getting was good—putting on the market anything which at least resembled an automobile and would get them a share of the public's attention—and money.

Their success was short-lived—naturally—although undoubtedly highly profitable for themselves.

But is that keeping faith with the public—is it "devoting at least a portion of your time to the upbuilding of the profession in which you work" is it a square deal for the dealer who loyally recommended the product to his trade—or for that part of the public who invested in the product?

Today, rubber is the young giant among industries and, true to precedent, scarcely can you turn around but a new tire is being put upon the already bewildered market.

Their future—also true to precedent—is easily readable.

The Name Behind The Tire

IN '91, a lone prospector discovered gold in Cripple Creek Canyon, inciting the famous '91 rush for gold, which four years later, showed average findings of \$6,878,137 a year.

About this time, Gormulley & Jeffery discovered the golden opportunity that lay in the pneumatic tire, destined to revolutionize modern vehicle travel.

Stock a line that after a quarter-century of scientific advancement moves in the vanguard of American-made pneumatic tires.

Selling the idea to the motorist through Brake Lining

IN your capacity as technical advisor to the motorist, you have an opportunity to profit by the economy idea.

Take brake lining, for instance—you know one big feature of Johns-Manville Non-Burn Asbestos Brake Lining is economy.

Economy because Johns-Manville Non-Burn is made of Asbestos—the only material that is fit to stand the terrific heat and grinding wear of braking service.

Economy—not only in purchase price, but for the longest service per dollar that any lining can give under any conditions.

Play up this economy idea—it's a fact—backed by Non-Burn—the worthy representative of Johns-Manville Asbestos in the Automotive Field.

And as to profit—ask your jobber to show you what others, who handle Johns-Manville Non-Burn, are doing right now.

of economy at a profit

and Speedometers

NO matter how good a guesser a motorist is, he can't tell how many miles he rides for a dollar unless he has a speedometer.

Tell him so. Show him why he needs a Johns-Manville Speedometer on his Ford car to keep track of expenses, to check the speed and know the distance traveled.

Sell him the economy idea in a Johns-Manville Speedometer. Go after the Ford owners especially. The Johns-Manville Speedometer for the new Fords can be quickly attached to the instrument board—it's made to fit exactly. Mechanically it's a precision instrument,—yet a simple one, without a single unnecessary part. Even the gear elbow is replaced by a gentle curve in the cased drive shaft.

You certainly can talk economy to the man with a Ford,—and there's real profit in it for you.

Our Jobber-Dealer Sales Policy assures you real trade protection. Write for details.

Price complete, \$16.50
West of Denver, \$18.00

MANVILLE

EQUIPMENT

LEON D. NISH

Secretary of the Illinois Hardware Association, who promises that their convention in Chicago this month will be more than worth while. Secretary Nish and his corps of co-workers have been working for months on their program and convention arrangements, and the time spent at this convention will be one of the best investments a dealer can make.

C. N. BARNES

Secretary of North Dakota Retail Hardware Association, tells the **HARDWARE WORLD** that he has never seen as great an interest in the work of the association as at this time, and he has had a quarter of a century experience. He confidently anticipates the largest attendance they have ever had, and their membership covers more than 90% of the hardware merchants in North Dakota.

RESEARCH LABORATORY OF THE JOSEPH DIXON CRUCIBLE CO.

The superstitious folk of the middle ages experienced a wonderful feeling of romance from the magic of their alchemists and wizards—a feeling based on the mystery with which their activities were shrouded. Yet absurd as were their claims, the alchemists undoubtedly were the forerunners of the modern scientific chemists.

Nowadays schools, books and magazines have dispelled the old cloud of mystification from the work of scientists, and the results of research are felt alike by the farmer, the manufacturer, the housewife and others. But who can step into a laboratory without feeling that the little blue flames, the little but loudly roaring furnaces, the crucibles and tiny cauldrons, the wicked-looking bottles, the strange and demonlike odors, are very suggestive of the days of witchcraft and conjuring?

There is such a place of interest and study to be found in the newly established Research Laboratory of the Joseph Dixon Crucible Company. It is located close to the works, but far enough away to avoid the noise and dust and be free from the vibrations of the factories, which are so likely to disturb the accuracy of the delicate instruments.

The building is a large twenty-room house, the old-time manse of a Scotch Presbyterian church, wherein no cushions or heat or music were permitted, so they are reasonably sure that Old Nick was long ago exorcised, never to return.

In this very much larger and more complete laboratory, they shall be far better able to analyze all their clays, graphites, and other materials that enter into the Dixon crucibles by the Dixon Company. They shall also be able to make microphotographs of all materials that require microscopic study. In other words, they shall expect to have what they have started out to have—a complete research laboratory, wherein their staff of chemists will be able to study

and to produce results of great value to the Dixon Company to its world-wide clientele.

BISSELL COMPANY COOPERATES IN ADVERTISING

The Bissell Carpet Sweeper Co. issues every month or two to its dealers a large sheet showing proofs of cuts that can be obtained free from the company as well as suggestive reading matter and forms for advertising. This literature will be distributed free to any merchant who sells Bissell Sweepers on condition that the sweepers be not sold at any cut rate, and the cuts be used to advertise no other sweepers.

The name of the Bissell Carpet Sweeper must at least be mentioned in the advertising. Most of the cuts are designed so they will encourage the sale of household goods and specialties, as well as the sweepers in particular. Of course any dealer who handles Bissell Carpet Sweepers may know that the company is behind him not only in spirit, but in letter and in active service. Any Bissell dealer who does not already obtain this service, or any merchant who is interested in such a proposition should communicate with the Bissell Carpet Sweeper Co., Grand Rapids, Mich.

The E. A. Franz Hardware Co., Hood River, Oregon, are planning to build a large garage to be conducted in connection with their hardware and furniture business.

On its fourth birthday the Nogales Hardware Co., of Nogales, Ariz., is reported as one of the leading business houses in Nogales and a thoroughly up to date firm. They do considerable export business to the state of Sonora, in Mexico. A full line of house furnishings and implements are carried in addition to hardware.

PEERLESS RADIATOR

No. 11

This GUARANTEED RADIATOR is equipped with the indestructible Peerless Honeycomb Core, that is so efficient for the cooling of Ford engines.

PRACTICALLY FREEZE AND BOIL PROOF

All parts coming in contact with water are of brass. Radiator shell finished with two heavy coats of black Japan; also nickel-finish. Brass core in gray. Fits 1917 and later model Ford cars. Also Ford One-Ton Truck.

Increased manufacturing facilities have enabled us to add an exact duplicate of the Ford fender to our present line. Shipments February 1st.

Write for complete catalog of **PEERLESS PRODUCTS**
FOR FORD CARS; radiators, hoods, radiator and
hood combinations, fenders, tool boxes.

Address Dept. 14
CINCINNATI

ROY SMITH, Secretary

The annual convention of the California Retail Hardware and Implement Association will be held in San Francisco on February 24, 25 and 26. Secretary Smith promises a most interesting and helpful convention, and believes that if there was ever a time when the California dealers should attend a meeting, their February convention is the one. There are many matters affecting the welfare of the retail dealers throughout California, and he anticipates a very interesting and helpful meeting.

A. R. SALE

The veteran secretary of the Iowa Retail Association, advises us that they are going to have a most interesting and enthusiastic convention. Some months ago every bit of space in the building was sold, and he expected to have an annex exhibit. He adds that the Ladies' Auxiliary organized last year is making plans for a large attendance of the ladies.

HAD ENOUGH OF COLLEGE PRESIDENTS

Editor **HARDWARE WORLD**:

As I preserve all copies of the **HARDWARE WORLD** for future reference, in looking over some former issues, I came across an address published in your October issue delivered by President Nicholas Murray Butler, of Columbia University.

In reading this morning's paper, I noticed an announcement of his candidacy for President, and I have felt constrained to write him and have done so, telling him that the period for the election of college presidents as chief magistrates of the United States had gone by for at least the next twenty-five or fifty years, regardless of one's capacity, character or evident fitness.

We have had enough of the "idealism" of college presidents to last us for the next hundred years. What the country needs is a good, strong American and a business man to conduct the business affairs of the nation.

H. O. BOE.

TO MAKE SURE

"Were you very sick with the 'flu, Rastus?"

"Sick, sick! Man, Ah was so sick mos' eb'ry night Ah look in dat er casualty list for mah name."

MAKE YOUR 'PHONE PAY DIVIDENDS

If the dealers who sell paint were as active in soliciting orders as the grocers, there would be more paint sold. If you hang around your home long enough mornings you will hear your telephone ring. The grocer is on the other end. He wants to know if your wife "needs any groceries this morning." Perhaps she thinks she doesn't. But the grocer never takes "no" for an answer. He begins suggesting things: "We have a nice lot of cantaloupe this morning," he is saying. "And we just received some fresh strawberries—and we have some of the best country butter you ever tasted." And so on. He will read the whole list until he gets the wife started. Then he begins saying "and what else."

Now if the grocer can put this over, why not the paint dealer? You say it isn't "regular"—maybe that's true, but everything must have a beginning. Suppose you put one of your sales force on the telephone and try it out. Have the salesman call a dozen or more homes and tell the housewives about a new enamel or a new floor paint that is just about the best thing ever. See how it works.

—A. P. O. D.

Make your store look prosperous outside, and it will be the more prosperous inside.

MOSSBERG

ALL STEEL Wrenches and Tools

A MOSSBERG Wrench for every need; adjustable, open-end, socket wrenches; socket sets (most complete), special wrenches for automobile, truck, tractor and Ford car equipment—A “Mossberg” for every requirement.

Hardware dealers stock the Mossberg line of **all steel** wrenches because the individual wrench or socket is strong and convenient—it is the result of long study of wrench needs. And this one line is so complete that it meets the needs of every customer; and special sets arranged for the garage man, the expert machinist, the motorist, the marine engineer, sell on sight.

Send for catalog and get acquainted with the various styles and finishes of the Mossberg line.

FRANK MOSSBERG CO.

Wrenchsmiths for 20 Years.

LAMB ST., ATTLEBORO, MASS., U. S. A.

**F. K. BECHERER**

Secretary of the Missouri Retail Hardware Dealers' Association, tells us that Missouri is really going to show just how enthusiastic and what a helpful meeting they will have at St. Joseph on February 17, 18 and 19.

THE MAN THAT STICKS

The man that sticks has his lesson learned;
Success does not come by chance—it's earned
By pounding away; for good hard knocks
Will make stepping-stones of the stumbling
blocks.

He does not expect by a single stride
To jump to the front; he is satisfied
To do every day his level best
And let the future take care of the rest.

For the man that sticks has the sense to see
He can make himself what he wants to be
If he'll off with his coat and pitch right in.
Why? Because the man that sticks can't help
but win!

BEFORE THE "NATIONAL" WAS INSTALLED

In Georgia they tell a story of a politician who was forever seeking to win the votes of his district to the end that he might be sent to the House of Representatives. In one speech this politician thought it might be well to make reference to his humble origin and early struggles. "Gentlemen," he said oracularly, "I got my start in life by working in a general store for \$3 a week, yet I managed to save money." At this juncture there came from the audience a shrill pipe: "Say, Bill, was that before the invention of cash registers?"

Those who do what they like seldom like what they do.

**C. W. LEMMERS,**

President of the Ohio Retail Hardware Dealers' Association, who wishes to extend through the **HARDWARE WORLD's** pages an earnest invitation and greeting to the retail merchants of the Buckeye state to be present in full force at their annual convention at Cincinnati, February 25, 26 and 27. Merchants from adjoining states will be equally welcome.

ROAD EXPERIENCE

The wind, from arctic coast afar, was blowing shrewdly, fierce and keen, and I was out in my closed car, consuming costly gasoline. I gloried in the wintry storm, I watched the snow drift with a smile; for I was cosy, snug and warm, and limousines are all the style. "Blow, blow," I said, "thou wintry wind, and shriek a fiercer, louder note, for I have winter badly skinned when I ride forth in my closed boat." And then a beastly tire went flat and I stepped out to view the wreck; the tempest blew away my hat and wound my whiskers round my neck. I toiled away with wrench and jack and shed a lot of frozen tears, and sprained my hocks and broke my back and froze my eyebrows and my ears. So I removed the busted tire and put another in its stead, and gathered wrench and jack and lyre and started townward, seeing red. I had not traveled half a verst, I had not gone a parasang, before another casing burst with raucous and resounding bang. And harder then the fierce winds blew, as I'd requested them to blow; and Father Winter sprained a thigh to show what spasms he could throw. I still have auto rides enough and still I burn the gasoline; but winter hears from me no bluff; I'm of a humble, chastened mien.

—Walt Mason.

An hour in the morning is worth two at noon, three in the afternoon and four at night.

DEATH TAKES A. W. TREDWAY

Alfred Worthington Tredway, prominent jobber of hardware in Iowa, died at his home in Dubuque on December 30, 1919, and was buried on New Year's Day. Mr. Tredway at the time of his death, was president of the A. Tredway & Sons Hardware Co., jobbers of shelf hardware and vice-president of the John Ernsdorff Iron Co., jobbers of iron, steel and blacksmith supplies.

Beginning as a clerk with the firm of Andrew & Tredway (established in 1853), he was admitted to a junior partnership in 1878, and in 1889, with his father, Alfred Tredway, Sr., and two younger brothers, founded the succeeding corporation now operating as the A. Tredway & Sons Hardware Co.

This corporation, under Mr. Tredway's guidance, absorbed the Schreiber-Conchar & Westphal Co., and in 1902, by the organization of an affiliated corporation, bought out the heavy hardware business of the John Ernsdorff & Sons Co.

The death of Alfred Worthington Tredway, at the age of 66 years, has removed a man who, while not of greatly advanced years, had possibly been longer in active service in the wholesale hardware business in Iowa and the adjacent states than any other in that business, and his loss is keenly felt, not only by his immediate business associates, but by a wide circle of manufacturers and customers who have known him long and favorably.

If the service in your store is slow, for lack of pep or for lack of proper equipment, you cannot take care of as many customers. Speed up all you can without hurrying customers.

No one ever regretted speaking with kindly tolerance, but most of us have been sorry for hasty words which hurt.

Instead of complaining all the time about the high cost of living, let's get even from the other end by cultivating simpler tastes and habits.

GEORGE W. LEEDLE

President of the Michigan Retail Hardware Dealers' Association, which meets at Grand Rapids on February 10, 11, 12 and 13. Michigan dealers are planning the best convention they have ever held. Under the Secretaryship of Arthur J. Scott, the Association has steadily progressed until the Michigan Association is often held up as a model by which others may pattern. In fact, there is a commendable competition between associations to see just which may render the best and most efficient service to their membership.

CHAIN PRODUCTS COMPANY INTRODUCES NEW TOW CHAIN

Of the new auto accessories that have come to the attention of this department one of the handiest is an 18-foot heavy link tow chain recently introduced by a well known Cleveland concern.

To the motor car owner who has luckily escaped the need for a tow chain any such a product apparently will serve the purpose, but to the initiated the following items will be of more than ordinary interest:

First, the links are unusually heavy and strong and the hook at each end is drop forged.

What is more exasperating than to start your tow, only to have a link give way or one of the hooks straighten out or break clear off?

Second, both ends are covered so that the enamel of neither the car towing nor the car being towed are scratched by the links while coupling or uncoupling.

Third, each chain is packed in an individual bag, making it easy to handle and keeping any mud picked up off the other tools of your tool box.

The average motor car owner who has never needed a tow does not fully appreciate what embarrassment can follow the breakdown of his engine while many miles from home.

Most passers-by will gladly give a helping hand, but can he expect them to carry tow lines if he carries none himself?

The Bulldog tow chain is made of 10-0 Bulldog chain, 5-16 inch material with a tensile strength of 4400 lbs. It is 18 feet in length, with a drop forged hook on each end and the links on each end are covered to protect the enamel of both cars.

Dealers will find this tow chain a product with a world of sales opportunity.

"Big Business" Buys UNITED Spark Plugs

Owners of big truck fleets buy United Spark Plugs because they survive the hard work and abuse of truck service.

United Spark Plugs provide consistent ignition day in and day out—they serve. And truck owners want the "Lockt" terminal—for it gives a positive contact that no truck vibration can loosen.

There are many repeat orders of United Spark Plugs—"Big Business" buys them again and again.

United Spark Plugs are guaranteed—and you make a liberal profit on each sale.

UNITED SPARK PLUGS

**F. J. THIELMAN**

President of the Minnesota Retail Hardware Association, whose motto is: "It can be done." The Minnesota Association is one of the strongest organizations of the country.

**H. O. ROBERTS**

Secretary Minnesota Retail Hardware Association. Minnesota Conventions are always worth while, and February 17, 18, 19 and 20 will witness one that it is expected will set a new record. Secretary Roberts is a veteran in the work.

DENVER JOBBERS ACTIVE

With the opening of the New Year the Jobbers' Association of Denver began an active and aggressive campaign to divert buying throughout the mountain territory radiating for 1000 miles into Denver.

The slogan, "Denver the jobbing center of the West," has been taken by the Association, and under the direction of Frank A. Bare, president of the Tritch Hardware Co. and president of the Association, the campaign is in full swing. Co-operative meetings of all salesmen in all lines are being held and the general object is to divert the trade into the houses working from there.

L. J. MUELLER PASSES AWAY

Louis J. Mueller, Sr., president of the L. J. Mueller Furnace Company, died last month at the age of 82 years. Mr. Mueller had been active up to the time of his death, which was sudden and unexpected.

Mr. Mueller was born in New York City in 1837, where he secured his early education, following which he learned the tinner's trade. He went to Milwaukee in 1855. There engaged in business, later expanding when Mr. Mueller began, in a small way, to manufacture furnaces.

During the last thirty-five years the Mueller Furnace Company has manufactured furnaces and boilers exclusively, and has grown to such proportions that approximately 500 men are engaged in the manufacture of furnaces in that plant.

Mr. Mueller is survived by his widow and four sons: Paul, Arthur, Louis, Jr., and G. C. Mueller.

CHARLES E. BELL PASSES AWAY

The trade of the northwest will learn with sincere regret of the death of Charles E. Bell at Seattle last month. Mr. Bell has been an employee of the Schwabacher Hardware Co. for the last fifteen years,

and his loyalty and valued service have earned the hearty respect not only of his employers, but of the entire trade in the northwest. His loss is hard to reconcile and his place cannot be filled.

KRAKAUER-ZORK COMPANY ANNOUNCED

Word has been sent to the trade from El Paso, Texas, over the hand of J. Krakauer, the new vice-president and general manager, that henceforth the Krakauer-Zork Co. has been adopted as the new corporate name of what was formerly Krakauer, Zork & Moye, Sucs., Inc.

This long, unwieldy name was adopted in conformity to the Mexican law, for the company maintains a branch in Chihuahua, Mexico. The change is merely one in form, and the famous Krackajack Service will continue to be noteworthy in the Southwest.

A CHRISTMAS WISH

Among the scores of beautiful and touching Christmas cards received at the office of the **HARDWARE WORLD**, none strikes a more harmonious note than that from the Vaughan & Bushnell Mfg. Co., Chicago, Ill. Its text is as follows:

"1869-1919. The spirit of the season prompts us to wish for you and yours a happy and prosperous New Year. As we complete fifty successful years in business, the executives of this company are deeply and sincerely grateful for the loyal and friendly co-operation accorded us by our many friends in the business world and wish to take this opportunity to express our appreciation.

"Friendly business is more than friendship—it is fellowship.

"**VAUGHAN & BUSHNELL MFG. CO.,**
"Chicago, Ill."

Stanwood Products

Good Selling Accessories

To the big majority of merchants and jobbers, Stanwood Products need no introduction—their high quality, their reliability, their serviceableness—their demand, have made a lasting impression.

Others seeking the "better grade" of automobile accessories, such as the Stanwood Equipment Company manufactures—Rubber Safety Step Plates, Rubber Heel Plates, Rubber Pedal Plates, Leather Hand Pads for automobile doors, Adjustable Accelerator Foot Rests, will appreciate their high quality, design, materials and workmanship which means the best.

Adjustable Accelerator Foot Rest sells at sight. The user sees comfort and convenience in this little accessory. Comfortable—relieves leg muscle tension, acts as a foot support. Con-

venient—prevents unintentional acceleration over rough roads. Price each \$1.60, list.

Send for a Catalog showing the line of Stanwood Products. A copy will be mailed upon your request.

Stanwood Equipment Company
307 Plymouth Court, Chicago, Illinois

Safety Step Plates for running boards add to car refinement, assure firm footing, and save wear and tear on running board linoleum. Made in various styles, rubber vulcanized to metal plates and also solid rubber segments inserted into metal rubber covered plates. Type B, \$2.65, List; Type C, \$1.60, List; Ford Type, \$1.60, List.

Accelerator Heel Plate furnishes a stable position for heel when operating the pedal. Prevents wearing a hole in the floor covering. May also be used as toe and heel guard on running board. Made of rubber vulcanized to a metal plate. Price 85c each, List.

Conformable Hand Pads add a pleasing appearance to car. Prevent finger marks and wear on finish of car. Made of leather in various grains. Price each, 90c to \$1.80, List.

**JOHN R. VESTRE**

President North Dakota Retail Hardware Association, who wishes the **HARDWARE WORLD** to urge upon merchants in the Dakotas, and everyone else who can get there, the importance of attending their annual convention on February 11, 12, 13, at Grand Forks. Their exhibit will be larger and better than ever before, and their program will be especially helpful and beneficial to every retail merchant.

A. J. STRANG

President of the Wisconsin Retail Hardware Association. President Strang has much reason to be proud of the position which the Wisconsin Association occupies, but he modestly takes little credit to himself, feeling that the work that has been done in previous years by those who have preceded him, as well as by that "wheel-horse" P. J. Jacobs, who is more than a whole team in himself, has placed Wisconsin among the associations that are ever alert to promote the interests of the dealers within her borders. He wishes us to extend, through our pages, a hearty welcome to the merchants in Wisconsin and adjoining states.

The Estes Hardware Co. has established itself at Porterville, Calif., with a large stock and bright prospects.

W. H. Cameron has bought the interest of W. H. O'Brien in the White-O'Brien Hardware Co., at Emmett, Idaho.

The Jones-McCord Hardware Co. have filed papers of incorporation at Baker, Ore. Norman Elliott is president, Floyd T. Jones, vice-president; Harvey McCord, secretary, and S. O. Correll, treasurer. The capital stock is \$50,000. The new incorporation succeeds the business of the pioneer hardware man, William Caldwell, and its members are all prominent and successful business men.

JOHNS-MANVILLE IN IOWA

H. W. Johns-Manville Co. announces the removal of its Des Moines office to more modern quarters at 213 Ninth street on January 2. W. B. Roberts, Des Moines manager, says that the new location will give him better facilities than ever for serving Iowa with Asbestos and Magnesia, Electrical, Automotive Equipment and allied Johns-Manville products.

TIRE REPAIR SCHOOLS NEXT

In the opinion of some of the country's more prominent tire men, the time is not far distant when it will be practically as necessary for the tire repair man to produce proof of training and study under competent authority as it is for the dentist, doctor or lawyer to show evidence of having completed a prescribed course in his profession.

Already there are being operated in Akron, Ohio, such tire repair schools for the accessory and garage service men in the country who want the benefit of the best training available for their special business.

The students in such schools first become thoroughly acquainted with the details of tire construction before being actually trained in the repairing work. Repair stocks, fabrics of all descriptions, air bags, vulcanizing machines and methods, common sources of tire trouble, etc., are among the subjects taken up. The instructors in these schools are thoroughly experienced tire men from both factory and retail business standpoints. They are also assisted by others equally well trained in the work.

The course may be completed in a month, but no diploma is granted without evidence of knowledge of familiarity with tires and repairing.

**H. H. ELLIOTT**

As announced elsewhere the convention of the California Retail Hardware Dealers' Association will be held at the Palace Hotel, San Francisco, February 24, 25 and 26. This is the annual meeting at which the election of officers will take place. The California Association have found it advisable to hold quarterly meetings in various parts of the state and in that way keep in touch closely with local problems and maintain the interest of the merchants in the work in which they are engaged.

GROWTH OF MARSHALL-NEWELL

Attention has recently been focussed on the Marshall-Newell Supply Company, of San Francisco, a firm whose progressive strides in recent years deserves mention. G. F. Newell and J. H. Marshall, president and secretary of the firm, are well known to hardware men of this state and have built up their business by steady work and honest dealing.

In the spring of 1918, they moved into larger quarters at the corner of Spear and Mission streets, having grown out of their previous place of business.

The present year has found them still growing. They have recently erected a warehouse near their present location. They have also opened a first-class and up-to-date builders' hardware sample room on the second floor of the Hobart building in San Francisco, the outcome of their efforts in selling the Yale & Towne Manufacturing Company's line of locks, builders' hardware and chain blocks. This sample room is for the convenience of local architects and clients, who may be building, and give the item of hardware its proper attention.

The "Acme Quality" paint line, which paint appears on the shelves of almost every hardware store and auto supply house, the quality of which is well known, is another addition to this house, and which affiliation it is expected will add much to the volume of sale of "Acme" paint in the state, as well as helping to expand the firm of Marshall-Newell Supply Company.

The Charles Ilfield Co., of Albuquerque, N. M., announces the opening of a branch house at Gallup, N. M. The company has purchased the store, business and warehouse equipment of Edward Hart, hardware merchant in Gallup, and will enlarge the building.

The Test of Daily Use

RUSCO Brake Lining and Clutch Facings

The test of daily use proves the excellence of the Rusco weave. Motorists who once use Rusco reline with it. They know that it has a grip that is reliable today, tomorrow and every day.

Guaranteed For One Year

Profit by Rusco's increasing demand. It makes goodwill and bigger business.

Education of Store's Sales Force in Selling Points and Arguments

(By John J. Commons, a Traveling Salesman)

WHILE I'm waiting for the buyer or killing a little time before train time I generally find it interesting—occasionally instructive—to observe the methods of clerks in making, or attempting to make, sales.

I call on the hardware and house-furnishing goods trade, and careful observation and many heart-to-heart talks with the merchants and their clerks, have convinced me that two things are necessary before the average retailer will "get anywhere," as far as prestige and profits are concerned.

These two things are:

- 1—The stocking of advertised goods.
- 2—A more careful training of the sales force in selling points and arguments—in other words, in salesmanship.

They Don't Really Know the Stock

It is unfortunate that the average clerk has only a superficial knowledge of the goods he sells. This is particularly true regarding certain high-grade merchandise handled by the hardware and house-furnishing goods dealers.

In a certain large store where well-known brands of builder's hardware, edge tools, cutlery, lawn mowers, refrigerators, paints and kindred lines are carried, I was waiting for the manager to return from the phone.

He had been called there to explain to a complaining customer that an oil stove should not be condemned because it suddenly developed a tendency to smoke—especially since it had been used twelve months with entire satisfaction. The manager spent fully fifteen minutes in an endeavor to convince the customer that possibly the syrup which, she acknowledged, had boiled over and run into the burner, was probably the cause of the trouble. So I had an opportunity to "size up" a few of his clerks.

A man came. He looked like what we used to call a "tight one." He had the air of a man in fear of beings slugged from behind. It developed, however, that he wasn't exactly in fear of his life, but he did want a lawn mower. I think he was a man of fair intelligence, but he wasn't inclined to talk much—possibly he hoped by being close mouthed to get a better bargain.

Clerk Just Said: "Something?"

A clerk approached with no more salutation than the one word "something?" The prospect said nothing, but advanced toward a raised platform where a dozen or more lawn mowers were on display, and by his apparent interest in the machines indicated that he was

"in the market." But still he refused to commit himself! One mustn't appear too anxious, you know. Better be sort of disinterested. It's also better to be a little mean to the clerk, too—makes 'em quote you a lower price. But finally the man whose front yard needed a hair cut for several weeks, admitted, grudgingly to be sure, that he "wanted to see what they had in lawn mowers."

And they had some good ones. Two different kinds of lawn mowers that have had thousands of dollars spent in advertising them in the newspapers and magazines. I just happened to know the sales points of one of the mowers, and when the clerk did nothing more than tell the price of the goods, I could hardly resist the temptation to take that prospect in hand and show him what a really good mower should be—and WAS—in the case of at least two machines on that platform.

Clerk "Pulled a Boner," for True

That customer could afford a good mower; of that I was certain. Yet he was allowed to buy a fourteen-inch mower, with only three blades in the reel, no ball bearings—not one single solitary thing to recommend it except its low selling price!

What's the probable result of such a transaction?

Of course any venture into the land of prophecy always entails some risk, but I do not think I am taking any long chances when I predict that the unknown, because unadvertised, low-priced mower would never thoroughly please the user; and that sooner or later repairs would be needed and not be available.

Judging by the appearance of the machine it would very likely get dull easily. The handle was light and poorly braced. In fact, it was just the kind of merchandise that makes a customer try some other store next time.

How much better it would have been for both merchant and customer if that clerk had been posted on the merits of the better machines! The owner of that store had several fine cash registers to protect his cash, yet he was allowing many dollars to escape before they ever left the pocket of the customer, if I may put it this way.

Might Have Pleased Customer and Also Made Better Profit

That same clerk in the same time consumed in selling a "cheap" mower, could have sold one that would have pleased the customer in every particular, and at the same time made

more money for the merchant. And this is saying nothing about the desire a merchant should have to make customers repeaters.

Does This Happen in Your Store?

What are you going to do about it? Could such a thing happen in your store? Why not stock nationally-advertised lines and then get the boys together one evening a week and coach them on the goods that deserve a little salesmanship? Why not ask a clerk to "sell" an article to you, the proprietor, before he attempts to sell it to a customer—a customer that you can't afford to lose through the sale to him of anything that will not give satisfaction.

BLACK & DECKER AT SHOWS

In accordance with its invariable custom of being right with the leaders in the industry, the Black & Decker Mfg. Co., Baltimore, Md., are exhibiting a full line of air compressors, lectro-flaters, electric

Black & Decker Auto Show Display

drills and valve grinders at both the New York and Chicago automobile show this winter.

These devices will be shown at work and also at rest, and there will be cross-sections to show the operating principle to the attendants at the show. The display racks on which the Black & Decker valve grinders and drills will be shown are the same as are being given to the company's stock jobbers for displaying these goods effectively in their stores.

?

I am the face of the store,
Mirrorlike I reflect the character,
Of the store and the merchant.
I am the retailer's most potent advertising
asset.

I can be the best.
I can be the worst.
Which will you make me?
Some merchants neglect me.
When treated right I mean an efficient store.
Every passerby appreciates me.

I give the "punch" which secures conviction.
I put across the "human interest appeal."
I individualize your product.
I create desire, demand and the sale.
I work for you twenty-four hours a day.
Treat me right and I know no sickness.
I am working with and for you all the time.
I AM YOUR WINDOW DISPLAY

ANOTHER OF SANTA BARBARA'S BIG FOUR

In a recent issue of the **HARDWARE WORLD** we described one of the attractive, progressive hardware stores of Santa Barbara, Calif. This growing city is fortunate in having four enterprising hardware merchants, and merchants nowhere work together more in harmony than here, where competition is very keen.

J. A. POTTER

Modern in every respect, progressive, receptive to new methods and ideas of display and service is the Boeseke-Dawe Co., of which J. A. Potter is president and manager, and E. S. Hicks secretary and treasurer.

The history of the Boeseke-Dawe Co. dates back over fifty years to 1866, but none of those who gave the concern its name are now connected with it. The old name, however, is so well established and sound, with a reputation for years of valued service, that when Mr. Potter purchased the business several years ago he considered the name distinctly an asset.

All of Mr. Potter's boyhood was spent in a hardware store in Iowa, and he had visions and dreams then that he hoped some day to bring to reality.

It was at Brawley, in the famed Imperial Valley, we believe, that he established the Brawley Hardware Co., and in the four years he was there he had the opportunity of putting into effect some of his own ideas. Yet he wanted larger opportunity. Disposing of his business there, he purchased the half-century-old business of the Boeseke-Dawe Hardware Co.

He at once began to make improvements, new display windows, new arrangement of stock, new methods and conveniences were instituted. Improved service to customers came with better lines of merchandise, staple commodities that the merchant can guarantee because the factories are back of him. With associates who knew the business and took a vital interest in it, he formed an accommodating sales organization, and employed a first class window trimmer. These associates were all animated with the spirit of J. A. Potter and one cannot blame Mr. Potter for the justifiable pride which he takes in his business and organization.

He is still making improvements and will continue to do so for all time. Before long, when the present changes have been completed, we hope to show another attractive western establishment, and perhaps before many months we will add the remainder of the quartet of hardware establishments that make the trade of Santa Barbara's Big Four eagerly sought after.

LANE BROS CO.

River St., Poughkeepsie, N. Y.

Little Bess was complaining that her stomach felt bad, and her mother said: "Perhaps it's because it's empty, dear. It might feel better if you had something in it."

Shortly afterward the minister called. In reply to a question as to his health, he said that he was well, but that his head felt rather bad that day.

"Perhaps it's 'cause it's empty," spoke up Bessie. "It might feel better if you had something in it."

CURTIS COMPRESSOR LITERATURE

At the offices of the Curtis Pneumatic Machinery Co., St., Louis, Mo., are available to merchants catalogs illustrating the complete line of the Curtis Pneumatic Machinery Co., including the additions made for the 1920 season.

The insistent demand from the jobbing and garage trade for outfits which will furnish air free from oil have made the compressors of the Curtis Co. keenly demanded, and the new booklets combine a complete description of every model, together with fittings, specifications, extras and advice for ordering.

Two important additions to the line are the style V outfit, which is a stationery model in sizes from 1/4 to 3 horsepower. Another new outfit is the style Y motor-driven machine to supply the demand on the part of the garage man for a small portable outfit for direct pumping to supply. It has 1/4 horsepower and is priced at \$130.00.

Full information and a complete description can be obtained from the offices of the company.

B. & D. CATALOG DE LUXE

The new and complete catalog of the Black & Decker Mfg. Co. cannot help but be regarded by the trade as a triumph for the company's good taste, and of the publisher's art.

It is thorough in its description of each item in the Black & Decker line, and fine engravings illustrate each device in minute detail. The pages are beautifully decorated in brown tones, and altogether an elegant impression of solidarity and reliability is conveyed by the catalog.

In no better way could the Black & Decker Co. bring before the trade its thoroughness and attention to careful detail and finished production.

Any merchant who does business with garages, machine shops, or other users of air compressors, electric drills, or valve grinders should certainly provide themselves with a copy of this catalog from either the Chicago, San Francisco or Seattle offices of the Black & Decker Mfg. Co., if not from the company direct.

HERE'S A LIVE STORE PAPER

Bullock's Hardware Store, at York, Neb., is certainly to be congratulated, if not envied, for the house organ, "The Whetstone," which has most happily come into the hands of the **HARDWARE WORLD** recently.

It is a four-page paper, printed in newspaper style, and issued periodically by these wide-awake merchants. In it are store locals announcing changes in the organization or in the store, items of community interest, which have to do particularly with hardware, announcement of specialty lines which Bullock's is handling, and jokes and personals. It is a readable paper, and we feel sure meets a real want in the community. We would commend such a paper to other merchants, who want to befriend themselves with the customers in their community.

Makes Ironing a Pleasure
Weight—
7 lbs.

Ask Your Jobber

(or his salesman) to tell you about the big profits live dealers everywhere are making with the famous self-heating "COMFORT" TWO-POINT IRON

TWO POINTS—a pointed heel and a pointed toe.

There you have the secret of the "COMFORT'S" wonderful popularity and success.

Every housewife who has ever used a sad iron knows how great a convenience is this feature of the COMFORT.

Thousands of COMFORT Gasoline Irons are sold every month by dealers in house-furnishings, hardware, furniture, farm implements, sewing machines, electrical household utilities and general merchandise. Every buyer of a COMFORT Iron sends other customers to your store.

Don't miss this opportunity to increase your 1920 profits from \$500 to \$2,000, or more. Right now is the time to place your order and get ready for the big demand that always comes with the passing of winter.

COMFORT Irons earn big profits for the dealer and are easier to sell than close-profit staple merchandise. Our advertising dealer helps make it easy. Mail your jobber an order today. Show the COMFORT in your window. It sells itself.

NATIONAL STAMPING & ELECTRIC WORKS, Manufacturers - Chicago, Illinois.

COMFORT TWO POINT IRON

PATRIOTIC DISPLAY FROM IDAHO

The **HARDWARE WORLD** is privileged to present herewith the armistice day window of John Hoene, dealer in hardware, farm operating equipment and automobiles at Cottonwood, Idaho. The main feature of the window was a battleship made entirely of hardware, and it is reported by Mr. Hoene that it was a great drawing card.

Resource and ingenuity were used in shaping tools from the shelves into this appropriate symbol of armistice day, as is evident from the photo. The window was trimmed by Al Herboth, of the Hoene Hardware Co. and it is only typical of the reputation he has attained as a window trimmer.

Mr. Herboth set a statue of the Goddess of Liberty in the left background to show that what had been a

war-like scene a year ago, was now best symbolized by the Figure of Peace. Some idea of the ingenuity used in making the battleship is evident from the fact that vacuum bottles were the funnels, electric lamp protectors the crow-nests, pipe fitting the broad-side guns, screw-eyes the port holes, and a self-basting roaster the forward turret.

A. M. Eckman and W. R. Lock have taken over the Larson Hardware Co., at Yakima, Wash., and expect to do a brisk year's work.

The Brawley Hardware Co., Brawley, Calif., will erect a new reinforced concrete building to give them facilities for carrying an increased stock.

Hygrade Window Displays

A standard window display is one item of the advertising material which we are glad to send to any dealer to help him sell

Hygrade Lamps

This attractive display is purposely made very simple so as to be easy to set up. It can be arranged to fit any size and shape of window and can be used with additional material if desired.

VICE-PRESIDENT MARSHALL AN EX- AMPLE NOT TO FOLLOW

The country has been amazed from time to time at some of the "epigrams" and speeches of Vice-President Marshall, and have looked in vain for some virtue that they could hold up as an example for the youth of the country to follow. But when the Vice-President of the United States proudly boasts of the fact that he never did a day's work in his life, and that he would not spend a day in the coal mines of the country for \$10,000, he is the only "statesman" who has ever occupied such an office that the youth of America should be warned against emulating.

Such talk from men in high places has tended more to create the spirit of bolshevism and anarchy in this country than can be counteracted for many years.

HE PICKED HIS WORDS

"Say, Daddy," said little 10-year-old Harold at the dinner table, "what is an 'entree' that you and Ma speak so much about? Is it something which comes in on trays?"

"No, Harold, my son, it is something which comes in between."

"Oh, yes, Daddy, I know, toothpicks."

SAID THE BARBER

"Did I ever shave you before?"

"Yes, a few weeks ago."

"I don't recollect your face."

"No, it's all healed up now."

FRANK A. BARE'S 600 DINE

Frank A. Bare, president of the Tritch Hardware Co., Denver, Colorado, had the distinction of presiding over a recent banquet given by the Denver Jobbers' Association to their sales representatives. The Denver Manufacturing Association and the Denver Credit Men's Association co-operated in giving this banquet, and the representatives of some 75 different manufacturing and distributing companies were present, numbering 600 in all.

Mr. Bare introduced during the evening no less distinguished men than Hon. Oliver H. Shoup, governor of Colorado, and Mr. Charles C. Gates, president of the Gates Rubber Co.

TAX PROBLEMS AND ANSWERS

By Peter H. Wagner, C. P. A.,
Certified Public Accountant and Tax Specialist.

In this article the discussion will encompass the necessary methods to be pursued by the individual after he has ascertained that he is required to file a return under the Revenue Act of 1918 as passed by Congress to effect the year 1919 and subsequent years. This has been made easier for the taxpayer, as all the laws and the amendments thereof have been brought up to date.

It is proposed now to indicate what income is and what receipts are exempt from taxation.

Income is defined as the total gains, profits and income derived from every source, less the deductions allowed. The net income of any individual, however, is computed on the basis of his annual accounting period of his fiscal year or calendar year as the case may be, in accordance with the method of accounting employed in keeping his books. Should it not clearly reflect such income, the computation should be on such basis as the Commissioner of Internal Revenue shall determine. There are two basis upon which an individual may file his returns.

1. A cash basis.
2. Accrual basis.

Cash basis represents the total receipts of cash for the accounting year of income from all sources less expenses incurred and actually paid out in cash.

The accrual basis represents all income of the current accounting period whether actually received in cash or not, less all incurred expenses whether actually paid in cash or not.

The gross income of a taxable person includes gains, profits and income derived from:

- (a) Salaries, wages, compensation for personal service of whatever kind and in whatever form paid.
- (b) Professions, vocations, businesses, trade, commerce or sales, or dealings in property, whether real or personal.
- (c) From interest, rent dividends, securities, or the transaction of any business carried on for a gain or profit, and income derived from any source whatever.
- (d) Gains or profits from property acquired by gift, bequest, devise or descent, but not the value of same.

If the property so acquired is subsequently sold at a price greater than the fair market value on the date received, or the fair market value on March 1, 1913, if received prior to that date, the gain in value is held to be income and subject to tax under the provisions of the federal income tax law. As an illustration of the above:

Suppose John Doe received through a bequest one hundred shares of stock of a corporation. The fair value of this stock on March 1, 1913, was \$10,000. The year 1918 John Doe decides to sell his stock and receives cash or its equivalent to the extent of \$12,000. For taxation purposes, therefore, his profit is the difference between \$10,000 (the fair value of the stock on March 1, 1913,) and \$12,000 or \$2,000.

It should be noted here that dividends received from a domestic corporation, although included as income, still is not subject to normal tax. It must, however, be included as income for the purpose of calculating the additional tax, also known as the sur-tax, which will be discussed later. Dividends received from a foreign corporation whose income is derived within the United States is to be treated as indicated above; dividends received from a foreign corporation whose income is not derived within the boundaries of the United States is not taxable at all.

The following income is exempt from the provisions of the law and is not to be included in the return of income.

1. The proceeds of life insurance policies paid upon the death of the insured to individual beneficiaries or to the estate of the insured.

New 1919 Catalog Furnished on Request

MOTOR MERCANTILE COMPANY

115-117 South West Temple Street, Salt Lake City

2. The amount received by the insured, as a return of premiums paid by him under life insurance, endowment or annuity contracts, except where such payment exceeds premiums paid by the insured as in the case of an endowment policy.

3. The value of property acquired by gift, bequest, devise, etc., (but the income from such property shall be included as income.)

4. Interest on (a) The obligation of a state, territory or political subdivision thereof or District of Columbia. (b) Securities issued under the Federal Farm Loan act of July 17, 1916. (c) The obligations of United States or its provisions. (d) Bonds issued by the War Finance Committee.

In the case of bonds of the United States issued after September 1, 1917, and bonds issued by the War Finance Corporation, the interest shall be exempt only if and to the extent provided in the respective acts authorizing the issue thereof. Every person owning any of the obligations, securities or bonds enumerated in paragraph (4) shall submit a statement with his return in such form or with such information as the Commissioner of Internal Revenue may require.

5. Amounts received through accident or health insurance or under workmen’s compensation acts as compensation for personal injuries or sickness.

6. Income derived from any public utility or the exercise of any essential governmental function and accruing to any state or territory of the United States.

7. So much of the amount received by a person in the military or naval forces of the United States as salary in any form from the United States for active services, as does not exceed \$3,500.

For further explanation it is necessary to state that the interest derived on the first issue of Liberty Bonds three and half is totally exempt, but all other issues (made after September 1, 1917,) are taxable in accordance with the terms under which they were issued.

Thus if a taxpayer holds bonds of the second and third issues, interest on an aggregate of \$5,000 bonds is exempt, while if he holds bonds of the fourth issue also, then the interest on bonds, the principal of which does not exceed \$30,000 is exempt from tax. The interest on bonds of the second and third is exempt up to one and one-half times the amount of bonds of the fourth issue not to exceed an aggregate principal amount of \$45,000.

As set forth in the above explanation, it is possible for a taxpayer to secure exemptions on Liberty Bonds to a total of \$110,000 principal amount as follows:

Fourth issue	\$ 30,000.00
Second and Third.....	45,000.00
First converted into Fourth.....	30,000.00
Original exemption on second.....	5,000.00
Third and Fourth.....	

Total.....\$110,000.00

Finally, the law allows an exemption in the nature of a deduction from taxable income the sum of \$1000 plus \$1000 if the person making the return be the head of a family or a married person living with husband or wife and \$200 additional for each dependent person.

AIR-WAY BY BOTH OCEANS

In announcing its newly established factory branches, the Air-Way Co., Toledo, Ohio, certainly proves that it is straddling the United States. In New York the Air-Way Vacuum Cleaner Co. has been established at 295 Fifth Avenue, and in Oakland, California, the L. H. Bullock Co., at 1538 Broadway, has been appointed a factory branch for the new and important vacuum cleaner.

Two export agencies have also been established through the Overseas Engineering Co., 44 Whitehall Street, New York, and at 75 Curtain Road, London, E. C. No. 2. A branch has also been located at Paris, France.

Ready for the Big Re-Lining Month?

During February, thousands of Ford transmissions must be given the needed re-lining in preparation for the season's start.

The hardware dealer or garageman who displays prominently this

Universal Unit Display Rack

has the better chance—to get his share of that business and part of the other fellow's. Coupled with the handy Ford set of **Universal Transmission Lining**—which it holds right up before the eyes of every Ford owner entering your establishment—it makes the combination that leads to biggest sales.

To any dealer who will write us on his letter-head, giving the name of the jobber through whom he regularly buys, we make this

FREE OFFER

of One Universal Unit Display Rack and One Full Package of Universal Transmission Lining which retails at \$1.25

Write that letter today

The Modern Factory

5547 Lena St., Germantown, Philadelphia

Equipped to make all widths up to six inches.

HARDWARE CONVENTIONS IN PROGRESS

As we go to press with this issue, a number of retail hardware associations are holding their conventions. The attendance this year on the whole is larger, and the interest in the work of the associations is more active than in any preceding year.

Many of the conventions are being held at practically the same time, and the proceedings are of such length that it is impossible for a publication issued once a month to publish in detail the proceedings of these conventions and the many interesting addresses that are delivered, but we shall have occasion from time to time to refer to the work of the associations and the results accomplished in our subsequent numbers.

The retail merchant who does not attend his convention is missing far more than he realizes, for it is here that he rubs shoulders with other successful merchants and obtains information that it is not possible in any other way.

J. Vickers Chown, a pioneer California hardware man, passed away recently at his home at Oakland, Calif. Mr. Chown is known as the manufacturer of Chown firebrick and the inventor of an electric oven. Recently he has been engaged in the development of a process for reducing iron ore without using coke. He was a native of Kingston, Oregon, and leaves a widow, three sons and a daughter.

APCO VALVE GRINDER

The Apco Manufacturing Company of Providence, R. I., has just brought out a new Valve Grinder for Ford cars that will appeal to both the expert repairman and the owner who does his own repairs.

Although low priced, it possesses several distinctive and unique features, among which might be mentioned the following:

In grinding valves the Apco Grinder holds the Valve firmly, so that it may be raised from its seat. It is

fitted with a universal joint which makes possible the grinding of the last valve and the revolving disc under the handle prevents the hand slipping down. The grinder is well finished, weighs one pound, measures twelve inches over all and retails for fifty cents.

This is another member of the large family of Apco products described in the new catalog which is now ready for distribution.

Don't grumble about conditions which you consider especially burdensome. Probably these are no worse for you than for other people. If the situation can be remedied, set about remedying it. If it cannot, make the best of it—the cheerful best—and sooner or later the tide will turn.

The Gila Supply Co. is a new enterprise at Globe, Ariz. They will carry a complete stock of shelf and heavy hardware. P. H. Grant, an experienced hardware man, will be in charge of the store.

THERE ARE NO BETTER
WRENCHES MADE THAN

“HEXALL”

TRADE MARK REG. U. S. PAT. OFFICE

“SELL” your trade on “HEXALL” Socket Wrenches. It will pay you, for when they are in the market the second time, they will ask for “HEXALL” by name—a highly profitable business to have.

“HEXALL” Socket Wrenches deserve their popularity. Handles are drop-forged; sockets are made from the bar on automatic machines, broached and case-hardened. Each wrench passes the critical eye of experts for flaws in material and workmanship. So, when a “HEXALL” reaches you, it is as perfect mechanically as human skill can make it. Thus is the broad guarantee that we

place upon every “HEXALL” our bond of faith with you and a challenge to the skill of the master-workers who make “HEXALL.”

“HEXALL” Socket Wrench No. 5—Hexagon Set—8 Pieces

“HEXALL” Ratchet Socket Wrench No. 2 Hexagon Set—11 Pieces

“BREAK ANY SEDGLEY WRENCH AND WE REPAIR IT—NO CHARGE”

The same class of trade that buys “HEXALL” Wrenches also buys the “BABY” Hammerless Revolver in addition to your general trade. It slips so easily into vest pocket, bag or grip—measures only 4 inches overall,

weighs but 6 oz. yet it gives absolute protection, shooting 6 positive fire, 22-caliber, short rimfire cartridges. It has folding trigger, interchangeable parts, one-piece main and trigger spring.

HUSBANDS SHOULD APPRECIATE THIS

"I have called," said the agent of the automatic housecleaning apparatus, "to try to interest you in our method of cleaning house. We have a machine here that will do all your work."

"Will your machine wash the outside of the upstairs windows?" exclaimed the woman.

"No, but—"

"Will it wash, stretch and iron the curtains; take them down and put them up again?"

"No, but—"

"Will it paper the little room in the hall and clean the wallpaper in the bathroom?"

"No, it is not intended—"

"Will it prevent my husband from walking across a clean floor with his dirty shoes?"

"No, madam, but—"

"Will it take down the parlor stove and put up the ice chest?"

"No, but we are prepared—"

"Will it wash the winter bed clothes, put camphor in my furs, make my daughter help with the dishes, keep my husband from grumbling about the good meals; persuade him to do the gardening, keep the dog out of the parlor, prevent callers from coming in to tea, paint the kitchen floor, gild the gas fixtures and the picture frames, hang new portieres, carry the ashes out of the cellar and find time to make

new dresses for three girls and summer night-shirts for my husband?"

"No madam, of course our machine has limitations."

"Limitations! Of course it has. Every machine has, but man expects a woman to have none. Limitations, indeed! If I had any limitations it wouldn't be long before this house would go to ruin. It will be a long time before you men'll make a machine to take a woman's place or do half the work. Good day."

The Reliable Hardware Co., of Chandler, Ariz., is now established in its new and handsome quarters. A spacious warehouse is located in the rear of the building. The Reliable Hardware Co. expect to cater extensively to the women, and have established a large housefurnishing department to which is attached a ladies' rest room.

William Akers, of the Akers Hardware Co., Rosalia, Wash., reports that his branch at Oakdale, Wash., faces a bright prospect for a big year. Business in that place is fine, and they expect to have plenty of stock to handle the trade this year.

J. L. Dempsey has purchased the hardware portion of the business of Lee Morris & Co., Clarkson, Wash. For some time he has had charge of the hardware department.

The wideawake hardware merchants of Southern California report unusual activity for the Orange Clipper Club, an association of the dealers in Riverside, Redlands, San Bernardino, Colton and Ontario, Calif. The club holds monthly meetings at one of these towns.

Mr. Hardware Dealer Here's a Live One

The EWALD FOOT ACCELERATOR For Ford Cars

A Source of Real Profit to the Hardware Merchant

Because the Ewald Foot Accelerator is a ready seller to every Ford car owner. It fills a real need and want and is an absolute necessity to good driving.

Nearly every other car manufactured is factory equipped with a foot accelerator and over 50,000 Ford car owners have so felt the need of foot accelerators that they have equipped their cars with the Ewald Foot Accelerator.

The Ewald Foot Accelerator allows the driver to control the speed of the engine entirely with the foot pedal as shown in the illustration above. It will save gas and will eliminate wear and tear by doing away with unnecessary racing of the engine. It adds a greater flexibility of speed control and leaves the hands free to operate the wheel, brakes and horn, making safety first more sure.

NEW DUNHAM, CARRIGAN & HAYDEN CO. CATALOG

A complete revision and new edition of the 2500-page catalog of Dunham, Carrigan & Hayden will be distributed to the trade about the first of February. This new catalog has been published at tremendous expense, and includes a revision and the latest changes in list prices on the complete line of hardware, auto accessories and sundry goods carried by this great western institution. Seventy-five hundred copies of the catalog have been issued and nearly all mechanical work has been done at the company's quarters.

STAR EQUIPMENT SALES CONVENTION

Officers, department managers, salesmen and factory officials for Hunt, Helm, Ferris & Co. have returned to their duties for the year refreshed, reformed and inspired from the recent sales convention held by the company at Harvard, Ill.

During the few days of session the factory was inspected by the visiting salesmen, the merits of each new and proposed addition to the Hunt, Helm, Ferris & Co. line of barn equipment was explained, and sales points covering every item and feature covered thoroughly.

B. B. Bell, secretary, treasurer and general manager of the company, presided at the sessions, and led the discussion. As the result of the session we look to see sales of Star barn equipment increase materially and the satisfaction produced by the buyers to be likewise completed.

WINCHESTER WILL FOSTER TRAP-SHOOTING

Trapshooting will receive more attention by the Winchester Repeating Arms Company in 1920 than in any previous year in the history of that wonderful organization.

The remarkable drawing powers of the Winchester team that toured Pennsylvania, Ohio, Michigan, Indiana, Wisconsin, Illinois, Missouri, Tennessee and Kentucky, touching 31 cities, in the fall of 1919, caused the Shooting Promotion Division, under the management of J. Mowell Hawkins, a celebrated and most popular shooter, to plan for a series of these trips in 1920.

It is the present plans of the Promotion Division to have three team trips—at different seasons of the year, each one in different territory and touching practically every point in the United States. It is likely that one trip will be through the east, another through the middle west, and the third on the Pacific Coast.

Besides the team trips, the Topperwein's will give exhibitions in various parts of the country. The team trips will be so arranged that Mr. and Mrs. Ad. Topperwein will be able to be among those present. The Topperwein's will again feature the Winchester exhibition on the Million Dollar Pier, Atlantic City, New Jersey, during ten weeks in midsummer. They shot before more than a half million people last summer, giving about 200 exhibitions.

Spring Leaf Lubricator Co., 1608 Forest Ave., Ann Arbor, Mich.

VACUUM FURNACE DISTRIBUTORS

Alexander & Kuhn, with offices at 523 Monadnock Building, San Francisco, have been appointed Pacific Coast factory distributors in the states of Oregon, Washington, California and Nevada for the Vacuum Pipeless Furnace, manufactured by Morrill-Higgins Co., Omaha, Neb., with a foundry at Belleville, Ill.

The new Pacific Coast distributors are anxious to get into contact with the hardware dealers, building contractors, plumbing supply houses and building supply people, or other good, live merchants, who can handle an agency for the Vacuum furnace.

This Vacuum furnace is pipeless, for old as well as new houses, and burns either hard coal, soft coal, coke or wood, and can be equipped to burn gas or oil. It is said to embody the most advanced and practical ideas in heating plants, and to be the ideal furnace for a new home.

Any merchant in the territory in which Alexander & Kuhn are the representatives, can get in touch with them at their San Francisco office.

YOST WASHER UNUSUALLY ATTRACTIVE

Live wire dealers the country over are finding a ready sale for the Yost Gearless Washer, manufactured by the Yost Gearless Motor Co., Springfield, Ohio, and announced elsewhere in this issue.

There are several particularly interesting features in connection with the handling of the Water Motor Washing Machine, and those not familiar with its features should lose no time in familiarizing themselves with the machine and the sales policy of the company.

The Water Motor Washing Machine is said to do everything that the electric machine will do except operate the wringer, and this particular feature is scarcely worth the difference between the price of the water motor washer and the price of the electric or other power driven machines.

The handling of this machine offers a quick turnover to the merchant and attractive profits are available to alert business men. In view of the large campaign that is going on the country over for labor-saving devices in the home, the dealer in the water motor outfit should be able to take advantage largely of those countless homes where an electrically driven outfit is not within the means of the owner.

Further detail may be secured from the company direct.

The Jones-McCord Hardware Co., at Baker City, Ore., have purchased the stock and store of the Caldwell Hardware Co. and will begin improvements at once to give greater facilities. They expect to expand the business materially during the coming year.

BISSELL'S NEW LIGHT SWEEPERS

In their New Year's announcement to their customers, the Bissell Carpet Sweeper Company announces some new lightweight models in vacuum sweepers. There is a decided reduction in weight, especially in the "Superba" model, which the manufacturers say is about three pounds lighter than the old machine.

Besides reducing the actual weight, other changes in construction have been made which tend to greater ease of running than the saving of weight alone would accomplish. Chief among these improvements is the bail which changes the downward thrust of the handle to a straight forward and back motion at a considerable saving of energy; new nozzle construction and new bellows construction, which increases the suction with less operating resistance. From the manufacturers' description it appears that they have been quite radically improved throughout.

The Bissell Company have always been progressive in improving their products and when they make an announcement of this kind it should be worth looking into.

THE DIFFERENCE WHEN "PA" AND "MA" IS SICK

When Ma is sick, she pegs away;
She's quiet, though, not much to say;
She goes right on a-doin' things,
And sometimes laughs, or even sings.
She says she don't feel extra well,
But then it's just a kind o' spell.
She'll be all right tomorrow, sure,
A good old sleep will be the cure.
An' Pa he sniffs an' makes no kick,
For women folk is always sick.
An' Ma, she smiles, let's on she's glad—
When Ma is sick it ain't so bad.

When Pa Is Sick

When Pa is sick he's scared to death,
An' Ma an' us just holds our breath;
He crawls in bed, an' puffs and grunts,
And does all kinds of crazy stunts.
He wants "Doc" Brown, and mighty quick,
For when Pa's ill he's awful sick.
He gasps an' groans, an' rolls his eyes.
Ma jumps an' runs, an' all of us,
An' all the house is in a fuss.
An' peace an' joy is mighty skeerce—
When Pa is sick it's something fierce.

UPS AND DOWNS OF LANGUAGE

"Did you call Edith up this morning?"
"Yes, but she wasn't down."
"But why didn't you call her down?"
"Because she wasn't up."
"Then call her up now and call her down
for not being down when you called her up."

"POWERFUL SICK"

In the bright sunlight on a railroad station in Georgia slept a colored brother. He snored gently, with his mouth ajar and his long, moist tongue resting on his cheek like a pink plush necktie. A Northerner climbed off a train to stretch his legs, unscrewed the top of a capsule and dusted the grains of quinine on the surface of the darkey's tongue. Presently the negro sucked his tongue back inside his mouth and instantly he arose with a shout and looked about him wildly.

"Mistah," he said, "kin yo' tell me whar I kin fin' a doctah?"

"What do you want with a doctor?"

"I'm powerful sick."

"Do you know what's the matter with you?"

"Sutt'inly I know wut's de mattah with me—mah gall's done busted."

ATKINS ADVERTISING SERVICE

E. C. Atkins & Co., of Indianapolis, have issued an attractive booklet, showing the advertising service with which they co-operate with retail merchants. This booklet should be in the hands of every dealer who is interested in increasing his sales and extending his trade on saws. It includes electrotypes and advertising carefully prepared for the use of the retail dealer, and also attractive window display features and trims, counter displays, cut-outs for advertising, etc.

R. F. SEDGLEY INCORPORATES

R. F. Sedgley announces that his business has been incorporated under the name of R. F. Sedgley, Inc. "Baby" Hammerless Revolvers and "Hexall" wrenches will be manufactured under the name of R. F. Sedgley, Inc., under same management and standards as formerly.

M. B. Karns is the new manager for B. Weil & Sons at Turlock, Calif. He is an experienced hardware and implement man and his friends and business associates are confident of his success in his new position.

North Bros., of Phoenix, Ariz., have purchased the hardware store of Ataway & Phelps. The business will be conducted by the new firm on practically the same lines as in the past.

The Woodlake Hardware Co., of Woodlake, Calif., announce that they will erect a new building to take care of their growing business. They expect a busy year in 1920.

W. C. McCandliss, who has had charge of the wholesale department of the Imperial Valley Hardware Co., at El Centro, Calif., is now manager of the store at Imperial, Calif., succeeding Victor Landford, who has accepted a position with a hardware firm at Santa Ana, Calif.

SINK GARBAGE CANS

Herewith we show a modern and improved sink garbage can, manufactured by the Rochester Can Co., Rochester, New York.

As is evident in the illustration, this can will prove a veritable boon to the modern housewife. It is made of heavy galvanized iron, reinforced at the top with a wire hoop over which the iron is curled. The bottom is double seamed and it is equipped with durable ears and heavy bailing handle. The one-piece cover is perforated so that surplus water may be poured off the refuse before it is

emptied into a larger receptacle. There is no dripping on the floor while it is being carried to a garbage can, and the cover will keep away flies.

PROGRESS IN EASTERN OREGON

Indicative of the condition of trade in general, and more specifically of the results of the Basche-Sage Hardware Co.'s method of doing business at Baker, Oregon, word comes from the company that they have just closed the most successful year in the history of business, showing an increase of 33 1-3% over the 1918 business.

They are naturally proud of this increase, and the Basche-Sage Co. are making arrangements to have the business of 1920 show a like increase over the past year's activity. An exclusive automobile accessory house will be opened in Baker by the company about March 1. These progressive merchants feel certain that the accessory business should be handled through the hardware houses where possible.

About 450 progressive hardware dealers of Southern California visited Torrance recently for the purpose of investigating the Torrance Window Glass Co.'s factory and the Llewellyn Iron Works.

The Fritsch Hardware & Furniture Co., Sedro-Woolley, Wash., has incorporated under the name of Fritsch Hardware Co., Inc. The company has been enlarging its stock and expect a banner year in 1920.

DO YOU KNOW PALCO ALUMINUM?

The hardware dealer who is passing up sales on Palco aluminum hot water bottles, syringes and can-teens is not keeping these products off the market at all, but is simply refusing the attractive profit and sales satisfaction that involves carrying them.

It is reported by H. J. Gute & Co., Pacific Coast representatives for the Worcester Pressed Aluminum Co., who manufacture this line, that already this year over 100 gross pieces have been sold. Some of this business has gone to live hardware dealers, but it has been the experience of the distributor that only about one out of a dozen hardware men will buy these, and as a consequence they let a good selling item go to competitive merchants.

It is only by taking advantage of an especially good item like the Palco bottle that the live hardware dealer can expect to compete with his aggressive rivals in the drug, sporting goods and department store business. Further information can be obtained from H. J. Gute & Co., whose announcement appears elsewhere in our pages.

David L. Gregg, who several years ago, sold his hardware store to L. W. Bosserman, at Tropic, Calif., has purchased half interest in the establishment and hereafter the firm will be known as Gregg & Neale.

Gregory & Chamberlain, of Seattle, Wash., will move their stock of paints and hardware to a new building, to give them facilities for carrying an increased stock.

John Guidinger and Charles Towle have purchased the hardware and furniture business of Charles Berberich, at Hollister, Cal., and henceforth will conduct it in new quarters, and with a new lease on life.

Charles H. Teaff, representing the Simmons Hardware Co., in China and Siberia, reports that the Siberian population are buying a large amount of American hardware, particularly mechanics' tools and cutlery.

Short & Letsinger have opened the former business of the A. R. Remick hardware and furniture store at Kelso, Wash., under bright auspices.

The Barrett-Hicks Hardware Co., Fresno, Calif., has purchased a 75-foot frontage on I Street, adjoining its present location, and plans to remodel its plant at the cost of \$30,000 in addition to the \$80,000 paid for the real estate.

O'Neal & Pettinger have purchased the former business of A. H. Wolford at Banks, Ore., and will conduct an up-to-date hardware, furniture and phonograph store.

Carl G. Clarke and Leslie & McVicar have purchased the former business of the Livermore Hardware Co., Livermore, Cal., and henceforth will conduct a hardware and implement, electrical and plumbing supply store under the name of the Valley Hardware Co. It will be connected with the Valley Garage of that place.

Seattle newspapers recently quoted the hardware merchants as saying that in the near future nails will be sold somewhat as sugar has been sold by the grocery merchants, only in connection with some other order. The nail shortage is becoming more and more acute in the hardware trade.

The Tum-A-Lum Lumber Co., at Atalia, Wash., has taken over the stock of the Quality Stores and will handle everything in the hardware line in that vicinity henceforth.

GOLD MEDAL SALES HELPS

Chock full of information, data and leads for increasing the sale of Gold Medal Camp Furniture during the coming summer season, the New Dealers' Helper Folder of this company has come to our hands.

Of particular interest and benefit to the trade should be the lithographed cardboard cut-out, reproduction of which is included herewith. A camping scene is illustrated, showing tents, furniture and a cooking outfit in use.

The company's support of its dealers is notable in the furnishing of slides for movies, booklets, folders, catalogs and a great number of electrotypes to be used in connection with the dealer advertising.

The Gold Medal Camp Furniture Co. also carries its own advertising in the leading sporting and outing papers.

COLUMBIAN ROPE CALENDAR

The trade was thoughtfully and artistically enriched last month by the Columbian Rope Co., when its new calendar for 1920 was mailed.

Typical of the usual publicity standard of the Columbian Rope Co. the new calendar depicts "Flying Cloud," a clipper ship of the old days, whose record of 89 days from New York to San Francisco in 1871 has never been surpassed.

The background and border of the calendar are in beautiful brown tones, and it is a wall decoration that would fit in the most elaborate surroundings.

Frank A. Kelsey, manager of the Hoene Hardware Co., Cottonwood, Idaho, recently left on an extended eastern trip, which will take him to many different factories and mercantile establishments.

A. V. Fortier and W. Rafter have purchased the stock of the Edison Hardware Co., at Edison, Wash., from J. W. Kinleyside, and they will continue the business.

A. E. Pouch, of Los Angeles, is now manager of the hardware store of McClellan & Larkin, of Baldwin Park, Calif.

FIRST AMERICAN BOLT ACTION SHOTGUN

Dealers will be interested in the appearance on the market of the first American-made shotgun making use of the bolt action. This is a new Winchester product made in the very serviceable .410 caliber size and is a fine piece of gun construction both in workmanship and appearance. The bolt action is of the most approved military "upturn and pull back" type, extremely simple to operate and accurate in functioning.

This gun is designed for use on the midget clay targets, where it offers a wealth of sport at economical expenditure; in small bird and game shooting, where its hard-shooting qualities are exceptionally attractive, and for shooting by women and young people where its light weight and very slight recoil make an admirable gun.

It is a two-piece take-down gun that is taken apart by the simple unscrewing of a small thumb-screw under the forearm. It has a 24-inch round barrel made of highest grade gun steel carefully bored and tested under the severest of excess loads for strength and shooting qualities. The breech is featured by a wide, roomy opening which allows plenty of room for loading with ease and quickness. The gun is cocked by pulling rearward on the firing pin.

This new gun is being offered with both straight and pistol grip black walnut stock. Over all the gun is 44½ inches long. It has a length of trigger pull of 13½ inches and the drop at comb is 1¼ and at heel 2¾ inches.

Enjoying the Winchester Junior Rifle Corps Range Kit.

MORE PAINT PROFITS FOR THE DEALER

Too Many Shades Make Shelf Warmers

(By J. E. Hatt)

The dealer in paints and varnishes today is confronted with a greatly increased cost of doing business over normal conditions existing before the world war. Items such as rents, salaries, trucking expense, freight, printing and every active item of business expense have greatly increased in volume over conditions of even a few months ago.

This increase in many cases is considerably larger in percentage than the corresponding increase in sales value of paints and varnishes. Obviously, therefore, it requires a greater percentage of margin on these sales in order to meet this condition. Dealers, undoubtedly, are thinking seriously of this situation and to those interested it is desired to point out at least one attractive possibility to assist in meeting this condition. The point referred to is reduction of the number of items carried in stock for the supply of his trade.

Manufacturing statistics show that approximately 85 per cent of the total sales in gallons of house paint is made on eight colors and outside white. This represents less than one-third of the total number of shades offered generally by manufacturers and points conclusively to the great desirability of the dealer confining his purchases to fewer items.

It is likewise desirable in a great many lines to confine his purchases to certain specific sizes in the various lines with an idea of minimizing the number of shades and sizes which he has in stock.

A properly assorted stock so selected will afford ample merchandise with which to supply the demand of his trade and will materially reduce his investment in these products. This reduction will materially reduce his investment or interest charges, and if utilized to advantage, will increase his annual turnover in proportion to his investment thereby increasing greatly the margin on that investment in his paint and varnish business.

It is not necessary, except in some unusual cases, for a dealer to stock, say thirty shades of house paint, together with three whites and black. In practically every case a great many of these shades are sold, similar at least one to another. Half of them, as a maximum, would provide every type of shade required. He should display from a wall a sign or short color card showing only the shades in stock and in doing this call will not be made for other than those shown, except in unusual and extreme cases.

This reduction of number of items further tends to increase the total number of packages of each shade sold and thereby makes it possi-

ble to keep a fresh, clean stock at all times, with the contents of the package in prime condition for use. It eliminates dead and slow-moving stock on the shelves which is sometimes closed out at a loss and it tends to concentrate the number of items to a point where it is easily possible for clerks and employes to become familiar with the items themselves, which in turn simplifies stock keeping and improves the service to the dealer's trade.

To put a stock in this condition first requires a reduction in the number of shades carried and this is not difficult to accomplish in many ways. Where only a few gallons of a color remain, it is possible to recommend to a prospective customer that he prime his job with one color and finish it with another of a similar shade. In this manner shades that are to be discontinued will be used up. Also, afterward, in case a job comes to hand which requires more gallons of a given paint than are on hand, this same feature can be employed of priming with one color and finishing with another, which will enable a dealer to supply the materials out of stock immediately, with a consequence of satisfactory service to his customer and obviate the possibility of a delay in receipt of additional materials from the manufacturer. Incidentally, this method insures the application of two full coats to the job. In certain spots on practically every building, it is possible, where using two coats of the same shade, for streaks, cornices, etc., to be overlooked with the second coat.

The most important point regarding the situation that the dealer confronts in his paint department is the question of decreasing his investment in that department without any decrease in sales, reducing the amount of space required on the shelves and in the stockroom, cutting down the possibility of slow moving and dead stock, reducing his insurance risk and increasing the proportion of profits in relation to investment on this department.

This makes it possible for a dealer to more completely finance his business himself; to be less dependent upon his banks and his manufacturer for credit favors; reduces his handling charge of stock, simplifies his purchase records and in every way contributes to the greater efficiency and proportionate gain from his business.

With a constantly increasing value of every package of paint, it is of extreme importance that these suggestions have serious consideration by the merchant interested in improving his investment position. This plan, if followed out in a wide-spread way, would, in due course, return a similar benefit to the manufacturer, and the jobber, with the attendant result that the cost of doing business in all of these lines would be materially reduced.

URGES REAL STANDARDIZATION

Editor **HARDWARE WORLD**:

Your request for me to speak out after I had timidly mentioned my silent approval or disapproval on the many articles on salesmen, selling and merchandise and have seemed to have held back with my silent criticism rather than to question or point out the defect and poor methods now existing, or submit a better plan or article at the angle that I see or understand them.

I may be all wrong—but—the advertisement on the cover of the October issue brought several things to my mind which I think the hardware dealers should demand from the manufacturers, and that is a little more standardization of many items of which we now have in what we may call "double standards."

This particular item referred to was hose and hose goods, and that line needs a little jar to straighten this line of goods to a better standard. To start the argument, lets begin on garden hose. Why should we have three sizes of this hose, as 1/2-inch, 5/8-inch and 3/4-inch? Then no standard diameters. By that I mean in reality that these three sizes vary in diameters from 1/2-inch to about 15-16-inch, according to the manufacturers of the hose. This makes trouble in getting the couplings to fit right, owing to the difference in the outside diameters of pressed brass couplings and cast brass couplings; then more trouble to fit the hose band. For example, where you should use a 3-ply band you may have to use a 4-ply band or perhaps a size larger and this may cost more, but you must stand this little extra and not the customer.

Still in connection with garden hose is the hose bibb—the 5/8-inch size. Have you ever noticed the diameter of this sized bibb on either side of the valve? On several that were cut that had been found defective by sand holes, ranged from 5-16-inch to about 9-16 inch in diameter, according to the makers. Since there are no 5/8-inch size of W. I. pipe made, the most of the 5/8-inch hose bibbs are a 1/2-inch size with a 3/4-inch iron pipe thread.

Of course it may be all right for the manufacturers to make their hose oversize to insure an ample supply or flow, but what would be the use to install 3/4-inch pipe in your house or garden and then buy a 5/8-inch hose bibb only to lose your efficiency or quantity of water desired or necessary. You might just as well buy 1/2-inch pipe and save the money. Eliminate the 5/8-inch hose bibb.

At present the hose manufacturers have their own standard diameters on hose, possibly no two alike. I think the hose manufacturers should adopt a standard diameter on each size of hose and that to follow iron pipe size, although iron pipe sizes are not actual diameters. For instance:

	Actual I. D.
1/4-inch iron pipe measures.....	.364-inch
1/8-inch iron pipe measures.....	.270-inch
3/8-inch iron pipe measures.....	.494-inch
1/2-inch iron pipe measures.....	.623-inch

The same standard should apply to rubber water hose, air, steam, fire and deck hose, which also varies in many cases and should follow iron pipe sizes.

At present we have several "standard" hose thread hose couplings as, Chicago, Boston, Pacific Coast and iron pipe thread hose couplings; which causes much consternation. If iron pipe thread were adopted would prevent many errors and much trouble. A contractor was installing a water system and tapped a 6-inch main for 3/4-inch I. P. thread corporation cocks, through an error in shipment he received some with hose thread. It was some distance to the supply house and it took time to make the change besides having made a good customer sore.

Another instance is aboard ship, which was equipped with Pacific Coast hose thread couplings, on hose and

valves. She moors alongside a pier to take on water, then finds that the dock is equipped with iron pipe thread valves; so this delays the vessel until the mate sends a man to the store to purchase a hose nipple or bushing, whichever is required, to fit.

Then another thing, the difference in the size of hose gaskets or washers in iron pipe thread hose couplings and hose thread couplings, which makes it necessary to carry two stocks of gaskets. Another misfit is the 5/8x3/4-inch hose or garden valve.

The wartime finish on many items have cheapened the appearance and selling points; the cap screw is one, let's demand a finished product.

Considerable credit is due the parties who started the "hardware graveyard" by acting as pallbearers in burying the "V" thread, and the sooner they put the 1/2 inch-13 thread in the morgue, then another trouble-maker will have passed.

Everybody likes to slam the mail-order house, but there is another enemy in the field that ought to be curbed, and of which I would like to slam, including the sleeping hardware dealer, wholesaler and manufacturer.

Yours truly,
Seattle. LAUREL R. KEMOE.

CALENDAR COMES WITH PROMISE

The Youngstown Sheet and Tube Co., of Youngstown, Ohio, has mailed to the trade a calendar for 1920, illustrating its various processes of manufacture and industry. In a statement accompanying this calendar the following bright outlook for the future is predicted by the company:

"The industrial and commercial skies will brighten with the growth of understanding that real peace and prosperity can come only through productive effort on the part of each individual in his chosen field of labor."

CALDWELL SELLS HOOVER BALLS

The Caldwell Sales Company, of San Francisco, with branches in Seattle and Los Angeles, have renewed their relations with the Hoover Steel Ball Company, Ann Arbor, Mich., whom they have represented for several years past. The Hoover Steel Ball plant is the largest producer of steel balls in the world, making all sizes, from that size used in the elbow of a typewriter arm up to those of 4-inch diameter, a size used in crude oil relay stations.

J. W. Kinleyside reports that he has disposed of his stock of hardware and implements at Edison, Washington, to the William M. Rafter Co., who will continue the business at the same place.

Two new men are now calling on the trade in the interest of H. J. Gute & Co., western factory representatives for the Manning-Bowman Co., and other household and specialty lines. Heber K. Gute is now working with the California trade and George E. Eldredge is representing the house in the northwest.

Merle J. Wightman, of Seattle, Wash., has invented an automatic stoker and a furnace device which enables one to use cheap, soft coal in the furnace. Mr. Wightman claims for his inventions that they revolutionize home heating by increasing efficiency, both through the use of low grade coal and the simplifying of home heating by making the care of the furnace almost automatic.

George L. Geus will open a hardware and auto supply business at Berkeley, Calif., to be known as the Geus Hardware & Auto Supply Co. He has put in a new stock of hardware, cooking utensils, oil heaters and paint, as well as a full line of auto supplies and specialties.

NOTHING BETTER THAN "PERFECT"

If Better Goods Were Possible, Ludlow-Saylor Would Make Them

The Ludlow-Saylor Wire Co., St. Louis, Mo., founded in 1856, incorporated in 1875, are one of the largest manufacturers of woven wire cloth. Part of their product is sold to the retail hardware dealer from coast to coast, but distributed through the hardware jobber. Their trade name is the "Perfect" and is familiar not only to the hardware trade but to the buying public as standing for the best of its kind. Their slogan is: "If better screen cloth were possible, Ludlow-Saylor would weave it," which is applicable to their entire product.

Their Window Screen Cloth is manufactured in Golden Bronze and Galvanized 12, 14, 16 and 18 mesh, Painted Black 12 and 14 mesh, in 100 lineal feet rolls, even inch widths 2 to 4 feet inclusive.

Their Hex Poultry Netting, Galvanized Before Woven is made in all standard assortment of widths, meshes and wires.

Galvanized Hardware Cloth, Galvanized After Woven, is made in $\frac{3}{4}$ " to $\frac{1}{8}$ " mesh in standard widths, meshes and wires.

They are also one of the original manufacturers of Fly Traps, covering a complete line for outside use around stores, dairies, meat markets, shops and so-forth, their idea being to get the fly before he gets in the house.

They dominate the field with their justly celebrated Double Crimped Wire Cloth used in mining, milling and other separating operations and their cement cloth is sold to prac-

tically all the manufacturers of Portland Cement in this country and in many of the large plants throughout the world. Such screens as the above are sold directly to the mines or mills and are frequently made to individual specifications. Much of their product is standard, so they can carry in stock a wide and varied assortment of these grades.

A large plant, favorably located in the heart of the Mississippi Valley, the gateway of the great Southwest, on their own private switch, connects them with all the great railroad centers at that point, so that their position is both favorable for receiving raw material and for shipping the finished product.

They have a capacity for an annual output of 20,000,000 square feet of Window Screen Cloth, 120,000 bales of Hex Poultry Netting and 12,000,000 square feet of Double Crimp Wire Cloth for mining and concentrating plants.

They will shortly have ready for distribution their new catalog No. 46, which is a complete wire cloth treatise and indispensable to the wire cloth dealer or user.

The Seattle Hardware Co. is said to have purchased a triangular plot lying south of its present holdings at First Avenue South and King Street, Seattle, at an estimated price of \$100,000.

The John Smith Implement Co., Walla Walla, Wash., has taken over the business of the Walla Walla Implement Co. and are erecting a new building to give them the necessary facilities.

W. H. Richardson and H. I. Monk have purchased controlling interest in the Thompson & Son Hardware Co., Harrington, Wash. The firm will be incorporated and some stock will be taken by the former owners.

STATE SEAL IN HARDWARE

Great interest was manifested at the recent convention of the Oklahoma Retail Hardware & Implement Association in the state seal of Oklahoma done in hardware as part of the exhibit of the Simmons Hardware Co.

At the close of the convention the seal was turned over to the Association, and they raffled it off, every member who registered having a number. Swann Bros., Maysville, Oklahoma, were the lucky winners of the seal, and they now have it on exhibition at their store. In making the seal 1293 separate pieces of hardware were used in addition to 15 yards of brass safety chain.

ANNOUNCING TO
Retailers, Jobbers and
Manufacturers

The First Sale of General Supplies
BY THE

U. S. WAR DEPARTMENT

The Surplus Property Division, Office of the Quartermaster General of the Army, offers for sale by negotiation the merchandise listed and described in the following pages. Informal bids on this merchandise will be accepted at any of the offices named in this advertisement until 3:00 P. M. (Eastern time) February 11th. No special bid form is necessary. No deposit is required. See the last page of this section for complete instructions. Included in this offering are the following articles:

Anvils
Feed Boxes
Horse Brushes
Ash and Garbage Cans
Can Openers
Cleavers
Dye Outfits
Files
Handcuffs
Metallic Handles
Pick Axe Handles

Steel Helmets
Meat Hooks
Branding Irons
Wagon Jacks
Camp Kettles
Candle Lanterns
Railroad Lanterns
Bake Pans
Field Ranges
Spades
Spurs

Stencil Outfits
Stocks and Dies
Mason's Trowels
Bacon Cans
Wire Brushes
Hair Brushes
Shovels
Aluminum Canteens
Meat Grinders
Curry Combs

Item No. 1

390 Anvils, Blacksmith

All steel, cast steel face hardened, new. Made with hardie hole and pritchel hole. Manufacturer, Columbian Hardware Company, Cleveland, Ohio. Location, New York. Approximate weight, 75 lbs.

Minimum bid considered, 10 anvils.

Item No. 2

1610 Anvils, Blacksmith

Wrought iron body, faced with cast steel put on in one solid piece, new. Made with hardie hole and pritchel hole. Manufacturer, Columbus Forge & Iron Company, Columbus, Ohio. Approximate weight, 75 lbs.

Minimum bid considered, 10 anvils.

Item No. 3

4,300 Feed Boxes

Made of galvanized sheet iron, each box pressed from one piece. Approximate dimensions: Width, top 11", bottom 8"; length, top 14½", bottom, 12"; depth center, 7". Top edges of ends and sides are turned over on ¼" round iron with eye or loop 1½" long projecting at each corner. Bottom corners are rounded. A strong, serviceable container. Location, Atlanta, Ga.

Minimum bid considered, 2 gross.

Item No. 4

87,000 Feed Boxes

Same as described under Item No. 3.

Location, Chicago, Ill.

Minimum bid considered, 2 gross.

In Bidding Mention "General Supplies" and Item No.

Item No. 5

100,000 Brushes—Horse

Oval, back ¾" thick, made up of two layers of tan sole leather with insertion of ground pressed leather 3/16" thick; all machine sewn with waxed thread, 7 stitches to inch. Brush equipped with back hand-strap of tan sole leather, 1¼" wide, securely riveted on by two rivets on each side. Bristles are black, good quality, ¾" long, five tufts to inch. Brush measures, mixed lots, 7" long by 4½" wide, with 9 rings of bristles; and 8¾" long by 4¼" wide, with seven rings of bristles and center line. Location, Chicago, Illinois.

Minimum bid considered, 6 gross.

Item No. 6

67,500 Brushes—Horse

Brush measures 6½" long, 4" wide, with eight rings of bristles. (For description see Item No. 5.) Manufacturer, Herbert Brush Manufacturing Company. Location, New York.

Minimum bid considered, 6 gross.

Item No. 7

54,700 Brushes—Horse

(For description see Item No. 5.) Location, Atlanta, Georgia.

Minimum bid considered, 6 gross.

War Department General Supplies

BIDS CLOSE
FEBRUARY 11

Inspection— Goods are sold "as is" at storage point. Samples of practically all articles are displayed at Zone Supply Offices and at the Surplus Property Division, Munitions Building, Washington, D. C.

Negotiations— No special form is required for the submission of a bid. Bids may be made by letter or telegram.

All bids must be submitted by 3:00 P. M. (Eastern time) February 11th. They should be addressed to the Zone Supply Officer at the nearest address: Army Supply Base, Boston, Mass.; 461 8th Avenue, New York City; 21st Street and Oregon Avenue, Philadelphia, Pa.; Coca Cola Building, Baltimore, Md.; Transportation Building, Atlanta, Ga.; Army Building, 15th and Dodge Streets, Omaha, Neb.; Ft. Mason, San Francisco, Cal.; 17th and F Streets, N. W., Washington, D. C.; Newport News, Va.; Jeffersonville, Ind.; 1819 West 39th Street, Chicago, Ill.; 2nd and Arsenal Streets, St. Louis, Mo.; Audobon Building, New Orleans, La.; San Antonio, Tex.; New Cumberland, Pa.; Columbus, Ohio; or to Surplus Property Division, Munitions Building, Washington, D. C.

Bids must be for goods at point of storage, as set forth in the specifications of materials advertised.

Each lot offered is identified by a number. Bids should include the lot number or numbers on which the bid is made. Bids may be made for any quantity greater than that stipulated as minimum bid which will be considered, or for the total quantity in any lot. In bidding stipulate price bid per article (for example, one hairbrush) instead of for total quantity. No bid stipulating "all or none" of any lot will be considered, unless that bid is the highest. No deposit is required with the submission of a bid.

Notification— Successful bidders will be notified by mail on or before February 16, and advised of the quantity awarded to each. A deposit of 10% of the amount due under each award must be made immediately upon receipt of notification.

Delivery— The articles offered are for spot delivery. Purchasers will be permitted to leave stocks which they may acquire in government storage for a period of 30 days after receipt of notification. Goods, so held, will be held subject to purchasers' risk.

Important— The War Department reserves the right to reject any part or all of any bid or bids. Inquiries relative to sales conditions or stocks offered should be addressed to the nearest Zone Supply Office.

Action— Take advantage of the extremely unusual opportunities presented in this advertisement. Give careful consideration to each item listed in this and succeeding sales. Every item listed is available for immediate delivery.

SURPLUS PROPERTY DIVISION

Office of the Quartermaster General, Director of Purchase and Storage, Munitions Building, Washington, D. C.

In Bidding Mention "General Supplies" and Item No.

AMERICAN WASHING MACHINE IN AEGEAN

The American washing machine has penetrated the ancient Greek island of Mitylene in the Aegean Sea. A Nebraska Red Cross woman recently exhibited the working of the modern American washing machine at the Red Cross warehouse before a crowd of several hundred interested women. They saw her put several soiled garments into a tub with a cake of soap and some water, then clamp down a top and start turning a crank. In ten minutes she announced the clothes were clean. Several in the crowd snickered.

But when the clothes were pulled out, white and clean, there was a babel of Greek amazement, and the women fought to examine the machine and to turn the crank at the second demonstration.

Have you not some "Greeks" in your community to whom you might make a similar demonstration?

ON THE JOB

The kirk was in urgent need of repair and Sandy McNab, a very popular member, had been invited to collect subscriptions for the purpose.

One day the minister met Sandy walking irresolutely along the road. The good man at once guessed the cause.

"Sandy," he said, earnestly, "I'm sorry to see ye in this state."

"Ah, well, it's for the good o' the cause," replied the delinquent, happily. "Ye see, meenister, it's a through these subscriptions. I've been down the glen collectin' fun's, an' at every house they made me tae a wee drappie."

"Every house! But—but surely, Sandy, there are some of the kirk members who are teetotalers?"

"Ay, there are; but I wrote tae those!"

BROKE AGAIN

'Twas the night before pay-day
And all through my jeans,
I was searching in vain
For the price of some beans.
But nothing was doing,
The milled edge had quit,
Not a penny was stirring,
Not even a jit.
Forward, turn forward,
O Time, in your flight!
Make it tomorrow
Just for tonight!

Treat the store visitor well who comes in to get money instead of to spend it. You may go out collecting some day yourself.

Farmers and Owners of Cars are Prospects

YOU who have in the past handled vehicles and wagons and have lost that profitable trade to the Motor Vehicle, are in a position to get the old volume and more back in handling "Utility Trailers" and without the necessity of giving service or having an expensive service department as is required where you sell motorized vehicles.

Every farmer in your community is a prospect for a Utility Trailer of some sort. Every motor truck running over your highways is necessarily a prospect for a Utility Trailer, if he is to compete with others using them, they bring truck operating cost down to a point where the profits are satisfactory, and truck operating brought out of the Red Ink.

Utility Trailers are motorless auxiliaries to the truck or passenger automobile, bringing you a clean profit when sold and a profit that is yours, not to be later paid out in shop costs of free service as in motorized vehicles.

We have some good territory open, write us for our proposition to dealers.

UTILITY TRAILER SALES CO., of Southwest

Plumbing and Heating

The bell foundries would be running double shifts if it was a law that every fool wore a bell.

What is the biggest job you are capable of tackling and putting across successfully? Do it then! Yes, you can, too.

If you find it advisable to shorten the hours your clerks work, shorten some at night and some in the morning, instead of cutting down the hours the store is open.

To keep strong and sweet, to bend circumstances to your will, to overcome, and to retain your faith in humanity—all this is proof of manhood which is eternal because it is a spark of the Divine.

When you advertise don't make your copy all from the "you" and "I" angle if you would have it sincere. Blend the "you's" and the "I's" and the result will be more convincing from every standpoint.

The man who is skilled in the conduct of his own business and who has confidence in himself goes quietly about the management of his affairs. It is the greenhorn who toots and honks noisily at every corner.

If you have made a success in some line, or if you have developed a special capacity for doing some one thing well, other people will find out about it. If you start to tell them they are likely to doubt it. That is to say, if you tell them at all, let it be by deed rather than by word.

Don't worry. It is a sign of mental weakness—of inability to reason, or of plain cowardice. The man who worried for fear his patronage would fall off, and lest the time might come when he couldn't pay taxes on his home and so lose it, is in the insane asylum. And the business is gone and the house, too. Not because there was any need for it, but because he persisted in worrying.

MESSAGE TO THE MASTER PLUMBERS OF THE UNITED STATES

(By Frank B. Lasette, of New York City, President of the National Association of Master Plumbers of the United States.)

There should be no doubt in the minds of those master plumbers who are patrons and students of the "Trade Press" and other publications of the trade, as to the great value and mission of the National Association of Master Plumbers of the United States and its kindred state and local associations. I have reference, of course, particularly to non-members, or those who for one reason or another—or for no reason—have thus far remained without the fold of our organization. I cannot conceive of any such doubt in the minds of our members, many of whom have participated in the annual conventions of the trade, and all of whom have had access to the printed proceedings of these conventions and other association literature for years back.

Every calling of man has its problems, and they affect for good or ill everyone therein engaged, so that after all, whether we realize it or not, what affects one, concerns all. Progress is nothing more or less than a struggle against obstacles, and as these are overcome, one by one, does that, which we are pleased to term civilization, move ever forward. True, some men—perhaps many men—succeed in spite of difficulties, and such men naturally become the torch bearers, or leaders, in the van of life's varied processions.

So, we find the successful business men in the forefront of all movements for trade advancement. They know too well the handicaps and hardships of individual initiative and the inestimable value and urgent need of co-operative effort, if the greatest good to the greatest number is to be the more readily attained, that is to say, with the least effort and greatest success. That is what organization is for, it has no other object. In other words, it is the joining of all hands interested in a common pursuit for the attainment of a common purpose.

Master plumbers, who make a practice of reading the trade publications, cannot but know what organization is doing for them and the

Announcement

Beginning January 1, 1920, my business will be conducted under the name of

The M. L. Kline Co.

There will be no change whatever in the personnel of the organization, which will be directed as heretofore entirely under my management and ownership.

In making this change we feel it will eliminate, to a great extent the delays and inconveniences which have been occasioned our customers in having mail or telephone calls directed to me personally, which are intended for the various departments of our company.

uplift of the plumbing business, and this is to say nothing of what has been accomplished in behalf of the public good, in the way of advanced sanitation. Those who do not read the trade papers, are more or less in the dark in this respect, and such, in the main, are those who cannot see any benefit in association membership. They have simply remained in the dark, have not kept pace with the times.

I dare say, if those of a skeptical disposition would but give a little thought to the reports of the recent Atlantic City convention of the National Association of Master Plumbers, and the important business transacted there, they would want to become a part of an organization that is engaged in such urgent work, that is doing so much for them and the business upon which their very livelihood depends. They would want to share in the labor as well as the fruits of plumbing progress, for I have confidence in man and believe that most men desire to be just and want to engage in some of the lifting—that they do not wish to be found among the leaners.

I will not at this time attempt to review the many excellent results of the Atlantic City convention. I will content myself with referring briefly to but one item, the naming of a committee to bring about, if possible, a standardization of plumbing and heating materials—a committee to confer with like committees of the manufacturers of various kinds of said materials, with the above object in view. At this writing it appears that there is much sentiment among manufacturers in this regard, and there is reason to believe that standardization is bound to come—that it is not very far off.

This is a big subject, a wide field, one which cannot be justly dealt with in a brief message like this. My object in mentioning the matter is principally to arouse the master plumbers to its importance, and to suggest that they follow the trade publications closely in order to keep in touch with the movement as it progresses. Already considerable has been published of the progress thus far made, though the work is only in its early infancy, and reports will be given out from time to time as the work advances. By the time the next convention comes around, it is hoped that something of a definite nature will have been accomplished.

Surely the non-members will be able to realize what standardization of plumbing and heating systems and fixtures, piping and fittings, plumbers' brass goods and the thousand and one articles of the trade will mean to the trade; the great saving in time and expense, to say nothing of the reduction of annoyance to a minimum. As this will benefit the entire trade, it should prompt every non-member to affiliate with the local master plumbers' association of his city, or if there is no local association in

his town, then he should apply directly to the National Association of Master Plumbers.

I cannot but believe that every live master plumber will want to be able to say that he is supporting such excellent activities as the foregoing with his membership. I am gratified to be able to say that some are beginning to see the light and are applying for membership. This is a hopeful sign, and I am confident that these applications will continue to flow in until we have every desirable master plumber enrolled and a united trade harmoniously working for the common good.

NOW IT'S THE M. L. KLINE CO.

Under a new corporate name the M. L. Kline Co., the wholesale business in plumbing, mill and steam supply conducted for over 30 years by M. L. Kline, starts the New Year with all of its old strength and this new advantage.

Hitherto some delay and inconvenience has been caused when customers directed their calls to the proprietor personally, which were intended for the various departments of the company, and henceforth the name will be no misnomer and entirely inclusive. There is no change in the personality of the organization, and it will be directed as heretofore entirely under Mr. Kline's management and ownership.

The M. L. Kline Co. distributed last month its annual calendar and memorandum book to the trade in Oregon, Washington and Idaho. As usual this useful souvenir from the company was eagerly sought by the members of the trade, and becomes a pleasant reminder to last throughout the year.

HEAT REGULATOR FACTORY GROWS

The Minneapolis Heat Regulator Company have taken out a permit for an addition to their fireproof, brick and concrete factory and office building, more than doubling the present size. Improvement and equipment will run to \$100,000.00.

The additional space and equipment to be added, will treble the company's manufacturing output. The company, at the present time, gives employment to 150 people. When the new additions are completed, the number of people employed will be in excess of 300.

George O. Fisher has opened a first class plumbing establishment at Auburn, Calif., where he will carry full lines of plumbing and heating equipment.

The following little trade verse is used by M. A. Spear, a progressive plumber at Fresno, Calif., and should certainly be suggestive to other merchants in the same or similar lines.

What Do You Think

They say I'm out of the game,
And other stories, too;
They mean I'm out of the union
With an open shop crew.

My line of "A Grade" fixtures,
Your plumbing I'm ready to do.
Engines, tanks, pumps, pipe and fittings;
Country work I solicit, too.

Next time you want some plumbing
Don't listen to what you hear,
But just ring up 3242-J
And ask for M. A. Spear.

MODERN METHODS IN PLUMBING

(By Henry James Buxton)

Almost everybody in this world has a method—the business man, the broker, the physician, the lawyer, the salesman, the clerk, the typist, the paperhanger, the pickpocket, the beggar and the safe cracker.

Hindenburg had a method when he flung his German hosts in gigantic drives against the Allied lines. But his method was defeated by a master military craftsman, Foch, who out-generalled the Hun commander at every turn of the wheel. Foch simply had a better method, that's all.

A man without method in this world is like a ship without a rudder. He will never get anywhere in anything. He will fail in business, social life or anything else he attempts. Hoboes are without a method—that's why they drift—drift, because they haven't an anchor of method to the windward. The germ of method died in their brains before it ever developed. They cannot work because they have no method. A man without method in this world can do only two things—drift and eat. And frequently they eat only haphazardly.

A man in this world who is a failure need only to drag out his method and inspect it to find the trouble. All failure can be traced back to that inevitable thing—method.

You may curse a dozen different things as the cause of your failure or lack of success, but in the last analysis you must admit that defeat came because of wrong methods.

The rule of method applies to the plumber just the same as to anybody else. Plumbers who go wrong in a business way do so because of poor method; plumbers who make good in a business way do so because of some good method they have hit upon. Hard luck or good luck has nothing whatever to do with it—it's just a matter of method.

In my rounds of the plumbers I find that all of them have methods. Some of them are haphazard methods; some are medium methods, others good methods, and still other methods founded upon a true understanding of the psychology of business. I have made the discovery that the plumber who has the knowledge of human nature has the best method. You've got to know human nature to have a worth while method. If you don't know human nature you are unfortunate, and the best advice I can give you is to go out and learn it.

John A. Quinn has been in the plumbing business in Philadelphia for more than twenty-two years, and is a firm believer in method.

"When I started in business," he said, "I mapped out a platform just like the politicians do at a national convention. I did this, for I realized that you can't do anything worth while in this world unless you have a program. I

knew I wouldn't get ahead very fast unless I formulated a set of principles. It was my intention to make the plumbing game my life work, and so I decided to play the game on the highest possible level.

"In thinking the thing over I decided that a reputation for good work was the greatest thing to be desired by a plumber who wanted to win.

"So down the years I have made that my plea—'good work—good work.' I pounded it into the heads of everybody in my district that I did nothing but good work, and I impressed it upon my men that I wouldn't tolerate anything but good work. I believed it myself and soon everybody that knew me believed it. Often men in my neighborhood have said: 'Well, I think I'll have Quinn do the job, for he'll do good work.' Could anything be more gratifying to a man in business? It was like new wine to my business, and I forged ahead at a fast pace.

"My jobs grew better and bigger until I landed my biggest job—that of installing heating and plumbing in the Frankford Hospital. That was a \$17,000 contract, and I was a proud man to get it. And I did the work so well that I am now putting in \$10,000 worth of plumbing and heating into the new hospital annex. I am also doing a little five-thousand dollar job in a national bank.

"My shop is running full blast all the time, and everybody is happy. I lay all of my success to that important little plank in my platform when I started in business 'good work.' It has paid me to be honest with myself and with others. I wouldn't skimp a job any more than I would cut off my right hand. I'll do good work or I won't do any work at all.

"This is an era of great prosperity, and there is plenty of money in circulation, due to the fact that the average man is earning more than ever before. But the world is waking up, and vast populations are beginning to sense real values. You can't bunk the people any more. The day of the spell-binding orator is gone. Today such an orator would spill silvered words to empty benches. Folks want facts today—they want their money's worth, and they are going to get it. This situation should be realized by the plumber. He should give his customers real values, and I am happy to be able to say that most of them do.

"My advice to the man starting in the plumbing business is, do a job the best you know how, even if you lose money on it."

Philip V. Shore, a successful plumber, laid the foundation of his splendid business by sending out to prospective customers cleverly phrased business appeals:

"With these circulars," he said, "I constantly reminded the trade that we were on the job. We didn't give them a chance to

"Pittsburgh"

 **AUTOMATIC GAS WATER HEATERS** 

PITTSBURG WATER HEATER COMPANY - - - PITTSBURGH, PA.

forget it. From the beginning we have climbed steadily, picking up new customers constantly and retaining the old. Our biggest order came two years ago, when we landed a \$100,000 contract for the installing of heating and plumbing in a big building operation. The successful plumber must constantly be alert to opportunity. The old adage, 'The early bird catches the worm' is as applicable today as it was when it was first invented. Business, like time and tide, waits for no man. If you want to pick the berries when they are ripe, you've got to be on the job every minute of the time."

Close application to work is the winning method which has been employed for years by the plumbing firm of Gregor Drummond.

"We have been doing business at this same stand for twenty-seven years," declared a representative of Mr. Drummond. "We are proud to say that by sheer merit we have built up one of the largest jobbing trades in the city. We also do a rushing business in the matter of bathroom installation.

"Mr. Drummond lays his success to the fact that during the past twenty-seven years he has always been on the job. When folks come around to our shop for estimates they do not find Mr. Drummond off on fishing trips or at the movies. He is right on the job in the shop, and he has the most intricate parts of his business always at the tip of his tongue.

"Folks like to come into our shops, for they know they won't have to wait for Mr. Drummond to get back from a pleasure trip. Mr. Drummond has always made it a practice to inspect every job done by his men."

"HAS" AND "ARE"

I'd rather be a "Could Be,"

If I was not an "Are,"

For a "Could Be" is a "May Be,"

With a chance of touching par.

I'd rather be a "Has Been"

Than a "Might Have Been," by far,

For a "Might Have Been" has never been,

But a "Has" was once an "Are."

George O. Fisher has opened a plumbing shop at Auburn, Calif.

Roy J. Weisgerber has purchased a half interest in the plumbing and heating business of Chester Philippi at Lewiston, Idaho. The business will be enlarged and new lines taken on.

Robert L. Robinson, at Yakima, Wash., reports that he is going into the plumbing business for himself after a long association with the Whitson Plumbing Co. there. M. D. Ives, a first class plumber, has associated himself with Mr. Robinson.

The California plumbing trade will regret to hear of the death of C. F. Sadowski, after ten years in the plumbing business at Oroville, Calif. Previous to that time he was for eighteen years with Brock & Taylor in the hardware business at that place.

TRY THIS CIRCULAR LETTER ON YOUR PROSPECTS

Dear Madam or Sir:

In this new age of higher prices everyone is constantly on the lookout for that which will produce the greatest comfort, pleasure and satisfaction for the least money. Below are listed some appliances that we have to offer at this time that will fill a long-felt want. These bargains are offered you at the prices named, subject to prior sales. These fixtures and appliances were purchased by us at pre-war prices and we are offering you the benefit of our buy. Fill in your price and mail.

One 6-foot 4½-inch roll rim bath tub on base with enameled factory finish on the outside, complete with heaviest quality N. P. fittings. Prices subject to prior sale. \$——.

Three siphon jet water closets with rear raised vent. This closet is of exceptionally high grade. Price, subject to prior sale, each \$——.

One 900-foot hot-water heating boiler. This boiler is suitable for an ordinary bungalow or cottage and is off the latest pattern. Price, subject to prior sale, \$——.

One 1525-foot hot-water heating boiler. This boiler is suitable for a fair-sized two-story residence and is of the latest pattern. Sale price, \$——.

Three 100-foot 38-inch 3-col. hot-water radiators, absolutely new stock. Sale price, \$——.

One stationary vacuum cleaner with full equipment, suitable for a five to ten-room house. Sale price, \$——.

Four No. 72 coal tank heaters for heating range boiler. Sale price, each \$——.

One No. 4 automatic gas water heater, second-hand; good as new. Sale price, \$——.

Every article listed above is new, except those listed as second-hand. We have many other appliances and accessories on hand or available that will fit your needs and requirements. It will pay you to drop into our store and look over these bargains.

Awaiting your early call, we beg to remain,
At your service,

Note to Contractors: How many times have you purchased a quantity of material from a similar list sent out by your jobber? The public will do the same. If you are from Missouri, try it. Do not make list too long.

"Now, Harold," said the teacher, "if there were eleven sheep in a field and six jumped the fence, how many would there be left?"

"None," replied Harold.

"Why, but there would," said she.

"No, ma'am, there wouldn't," persisted he. "You may know arithmetic, but you don't know sheep."

ROXBURY (BOSTON), MASS.

A Touching Story

(By Harry Gale Nye)

OF THE various nuisances which infest this world, from the flea that bites you behind the ear as you lie in the sand at the bathing beach to the elephant who steps on your toes at the circus, and all the things of different size to be found between an elephant and a flea, one of the best annoyances ever invented by his Satanic Majesty is the man who borrows money. I refer not to the man who goes to the bank and borrows back at six per cent the money he has deposited at three—

But I refer in this particular article and instance to the ordinary garden variety of borrower, who just happens in and makes a touch. We used to go to "East Lynne" and "Ten Nights in a Bar-room" and other sad and sombre plays and pretty nearly cry our eyes out over other people's trouble. But why pay \$1.50 for a seat in a stuffy theatre to hear a hardluck story when for a dollar or so you can sit in your nice warm office and hear one?

For the toucher is not only a Taker of the Coin but also a Spreader of the Gloom. You may be feeling as happy as a man who has just made nine holes in 47, or a neighbor's pup that has been scratching up the garden; and then in comes the toucher with his touching story.

He may have known you when you were a boy, and for that reason presumes to come and ask you for the money; or he may not know you at all, but knows that you are a successful business man and presumes because of that. And then he unfolds a tale of woe in twenty volumes with leather backs and gilt edges that you can't resist. It is very sad, but you do not weep—you are too busy wondering how much this is going to cost you.

There are various sizes and prices of touches. For \$100 you can buy a story of a mortgage on the old homestead, for \$150 a wife in the hospital, for \$10 the rent coming due, for \$5 a doctor bill, for \$2 a chance to get to another town and a mythical job, for \$1 a flop for the night, and for 25c coffee and sinkers for a starving and unfortunate mortal.

Sometimes you have a heart of tool steel and can refuse. But there is always one man who always lands you; that is the fellow who tells you the \$25 yarn and then asks you for \$2. It is a chance to save \$23 that the thrifty soul of a Successful Business Man cannot resist.

"Neither a borrower nor a lender be," says some wise guy. But if you are a lender at least

do not do this: do not jolly yourself with the belief that you will ever get it back. Eight years ago I let a fellow have \$100 in New York. (When you are in New York what is a hundred dollars?) The other day the phone rang.

"Do you know who this is?"

I didn't.

"I am the guy you loaned the hundred to in New York eight years ago. I'm coming up to see you."

"Come right up. Don't knock. Walk right in."

"No, I can't come now. I'll be there at nine tomorrow morning. Will you be there?"

"I'll be here at eight-thirty."

After thinking it over, I slept in the office that night. Nine came the next morning at last. And ten. But not the toucher. But at eleven he did. He looked prosperous. I noticed that as soon as he came in. And bland and smiling.

"Well?" I asked encouragingly, as soon as I had handed him a cigar.

"I just came up," he said, "to see if you could let me have another hundred."

No, you can't feaze these fellows. One of them came to me one day looking, strange as it may seem, not for money, but for sympathy.

"I have been insulted," he said indignantly.

"How so?"

"A fellow from South Bend offered me a job—"

"Well, is it an insult to offer you a job?"

"No, but how much do you suppose he wanted to pay me?" "I don't know; how much?"

"Twelve dollars a week!—why, I can borrow more than that right here in Chicago."

It's easy to be a "kicker"—the majority of men are. It's hard to be a "doer"—that's why they stand out so prominently in the world. In any office or occupations you can always pick out the "kickers" and the "doers." The "kickers" never kick themselves ahead—unless it's out the door. The "doers" are too busy to kick and soon reach a position where they have no kick coming. If your wagon is stuck in the mud, buckle down and pull it out. Kicking won't get you anywhere.

It is reported from Glenwood, Cal., that H. Brown, the progressive plumber there, has as much work as he can handle in equipping the new building.

George C. Fisher has opened a new plumbing establishment at Auburn, Calif., to handle full lines of plumbing and heating equipment, oil burners and refrigerating supplies.

A Cold Snap

always brings a lot of "hurry up" repair work. Don't let your competitor get your share of this profitable business. Use the best tools and they will enable you to do repair work better and more quickly. C. & L. Fire Pots and Torches are the best, they produce more heat, using less gasoline than other makes. Jobbers supply at factory price. Send for catalog—it's free.

CLAYTON & LAMBERT MFG. CO.,
Detroit, Mich., U. S. A.

John was home from college for the winter vacation, and before long was infatuated with the beauty of a neighbor.

His father noticed his evident admiration.

"Did ye notice how old Mason's daughter have shot up, Jack?" he asked his son one day. "Seems to me she's gettin' quite a handsome young critter."

"Father," said Jack enthusiastically, "she is as beautiful as Hebe!"

"As he be?" ejaculated the old man. "Joe's got a face like a pig in a fit. It's her mother she gets her looks from. She's as beautiful as she be!"

Patented
"B" Kerosene
Furnace

WHERE QUALITY REIGNS SUPREME "ALWAYS RELIABLE" Furnaces and Torches

Since 1876 we have been manufacturing this line. Today we are one of the largest producers of furnaces and torches in the western hemisphere.

Why do mechanics demand the "Always Reliable?" Because this make is made from the best materials obtainable, and by skilled workmen, therefore, guaranteed to give you perfect satisfaction; and because this make is considered the most practical on the market, due to the patented features with which it is fitted.

A trial will also convince you as it has thousands of other users.

"The Largest Stove Repair House in the Northwest"

THOSE DEAR GIRLS

Annie—It was awfully dark where we met under the trees, and the first thing I knew, he'd kissed me.

Fannie—I wouldn't be angry about it, dear. I don't think he'd have done it had it been in the daylight.

That C. E. Gray, of Lamanda Park, California, is a progressive, up-to-date plumber is apparent by the attractiveness of his store both inside and out. He carries a large supply of plumbing goods and is always in shape to fill all rush orders that come to him.

Busch & Stewart, plumbers and sheet metal workers, have opened a branch at Independence, Calif. It is their intention to carry a full line of plumbing supplies.

SOMETHING TO CROW ABOUT

An Englishman on a fishing trip in Scotland did not think that his Highland boatman was treating him with due respect.

"Look here, my good man," he said, "you don't seem to grasp who I am. Do you know that my family has been entitled to bear arms for the last two hundred years?"

"Hoot mon, that's naething," was the reply. "My ancestors have been entitled to bare legs for the last two thousand years."

The man who has a little and wants less is richer than the man who has much and wants more.

A VERY CAREFUL SERVANT

A master said to his servant: "Thomas, my man, I want you to take this parcel to the station, and put on the top, 'This side up with care.' Now, you understand?"

"Yes, sir," said Thomas.

He returned in about half an hour.

"Well, Thomas," said his master, "did you manage it?"

"Yes, sir. I took it and wrote on the top, 'This side up with care,' and to be sure they wouldn't miss seeing it, I wrote it on the bottom, too!"

Retail Selling Prices

The following are the present market retail selling prices of merchants in some of the large cities. At the request of many merchants in smaller towns and cities who do not have the opportunity of checking up their prices often, we revise these prices each month. In communities removed from the larger cities, transportation charges would of course be added. As the overhead expense of a retail business in any part of the United States ranges from 20% to 25%, many merchants use these prices to save time in figuring their own. We will be glad to receive suggestions and corrections as to any prices quoted herein and any items not mentioned.

Must have ability to meet people well and must have good mechanical judgment and some knowledge of pumps. Need not have technical education or be a mechanic, but should have ability to direct mechanics. Address G. C., care HARDWARE WORLD.

WANTED

Young man to assist in hardware, implement and pump work. Experience not necessary if willing to learn and advance. Replies confidential. Address L. H. S., care HARDWARE WORLD.

HARDWARE WORLD

BUSINESS OPPORTUNITIES — Continued

STOP!! LOOK!! READ!!

Four-line rhyme or two-line slogan—any trade—\$1.00 each. Composed by H. S. Geer, 2 Mt. Hope Place, Bronx, N. Y. Send Circulars.

FOR SALE

Hardware and Furniture Stock in prosperous, well located city in Oregon; a clean, good paying business. Stock will invoice about \$30,000. Anyone wanting a business of this kind will pay them well to investigate this proposition. Address L. O., care HARDWARE WORLD.

SALESMAN WANTED

Side line and specialty salesmen to handle Alcemo lines to hardware jobbers and dealers, also department stores. Attractive range nationally advertised. Liberal commission basis. Alcemo Mfg. Co., 101 Bridge St., Newark, New Jersey.

FOR SALE

In a Southern Idaho irrigation growing town, hardware, furniture and implement stock; will invoice about \$22,000. Also will sell new brick building and modern fixtures at far less than cost. Carry complete line of International Harvester Co. implements, and the only complete hardware line in town. Annual sales \$90,000. Address Idaho, care of HARDWARE WORLD.

WANTED

Young man with thorough knowledge of hardware and kitchen ware in a large retail store with high class trade and a good location. Must be live, energetic, neat appearing and courteous. Must furnish first-class references. State experience and salary expected. Address O. H. C., care HARDWARE WORLD.

WANTED

I want to purchase in a town of not less than 2000, in any of the Pacific Coast states, a good, clean, going hardware business, that shows a good profit and will range from \$6,000 to \$20,000. Give full particulars, size of town, size of stock, your price and reason for selling. Prefer to deal only with owner. Address Xtra, care HARDWARE WORLD, 388 Taylor St., Portland, Ore.

POSITION WANTED

As assistant manager or director of a housefurnishing department in a retail or department store is the position I would like. Nine years' experience should be sufficient to guarantee my ability to fill the position. Twenty years as a road man, visiting this same trade, has kept me in touch with the line specified. Salary no particular object, but a living remuneration expected for my services. Address G. S. H., care HARDWARE WORLD.

POSITION WANTED

An A-1 opportunity to secure the services of a high class hardware man who has successfully qualified as buyer and hardware department manager handling builder's hardware and material, paints, oil and glass, tools, iron and blacksmith supplies, cutlery, guns, ammunition, fishing tackle and sporting goods, stoves, ranges, household and kitchen supplies. Have had several years' road experience in handling wholesale and retail stocks of hardware. Can make good in any hardware position anywhere. Have bank and business house references; also some cash to back me. Address Montana, care of HARDWARE WORLD.

WANTED

Man who is experienced in the arrangement of hardware stores and the design of effective fixtures. Should have had retail selling experience in hardware lines. A real opportunity for a young man of good personality and real ability, who can do constructive work for hardware stores. Write full details, giving age, education, experience and salary desired to start. Address reply care of Box 125 HARDWARE WORLD.

SITUATION WANTED

Hardware and implement man, age 85 years, married. Experience, two years as clerk and ten years as manager and buyer for the same large corporation. Machinery salesmanship, credits and collections my hobby. Will invest \$3,000 or more with good, live concern. Climate conditions at present location reason for leaving. Address Credit man, care of HARDWARE WORLD.

POSITION WANTED

Young man twenty-nine years of age with executive ability would like managerial or traveling position. Ten years' experience hardware, house furnishings, sporting goods and window trimming. At present holding responsible position with large retail concern. Highest grade references furnished. Excellent past record; can produce results. Address Box 1822, HARDWARE WORLD.

FOR SALE

Splendid opportunity in the retail hardware, grocery, gent's furnishing and shoe business. Approximate stock is as follows: Hardware, \$15,000; Grocery, \$3500; Gent's Furnishings, \$6500. Located in a town of 1200 population, with 3500 tributary. Competitors are one small hardware store and three grocery stores. Sales will run \$75,000 annually. Will sell all or other departments. Other business occupying attention. Splendid arrangements can be made with reference to the building. Located 45 miles from San Francisco in one of the best agricultural sections of the country. Address F. T., care HARDWARE WORLD.

JUST WHAT YOU NEED

Sheet Metal Card Holders, Transparent Celluloid Card Covers, Bin Markers and Stock Record Cards for small parts and fittings of all kinds. Plumbers Labels and Stop Valve Tags, Special Bin Labels for Ford Auto Parts, Price Cards. Send for samples. Our prices will surprise you. Hadden Specialty Co., Haddon Heights, New Jersey.

FOR SALE OR TRADE

820 acres of land 13 miles from town of 4000 population. All fenced, small house, well, small granary. About 200 acres plow land, balance pasture, 45 acres plowed at present. Must sell or trade before March 1. Make me an offer. Snap price, \$5800; mortgage \$1600. J. L. Bernauer, Owner. Glasgow, Mont.

HARDWARE BUSINESS FOR SALE

Surviving partner wishing to retire offers for sale one of the oldest, best located, most profitable hardware stores in San Francisco. Stock about \$50,000. Address B. U. Y., care HARDWARE WORLD.

FOR SALE

Stock of hardware, furniture and implements in the richest section of Yakima Valley. Will sell on inventory for cash. No trades. Stock will invoice about \$5000. Address XYZ, care HARDWARE WORLD.

FOR SALE

Established wholesale and retail hardware business in Northern New Mexico. In operation 14 years. Enjoying good business on very profitable basis. City and surrounding country in which located very prosperous. Healthiest climate in United States. Merchandise stock approximately \$50,000. Reason for selling, retiring. Address New Mexico, care HARDWARE WORLD.

SITUATION WANTED

Hardware man, age 34, married, 15 years' experience retail and wholesale. Salesman, buyer and manager. Capable, experienced, reliable and the ability for results. At present employed as manager of retail department in wholesale house. Will make change for connection with good reliable hardware firm that has a permanent future. Address Box K. I., HARDWARE WORLD.

WANTED

Second-hand 8 ft. cornice brake in good condition. Address L. E. Reed, 115 East Lexington St., Independence, Missouri.

I WANT TO BUY

a hardware store in Oregon or California, prefer a stock of hardware or an accessory business and garage; don't care for general merchandise lines. Would not want it to run more than \$8000 or \$9000. Location and everything must be right. Prefer a town of 3000 or over, if it has good surrounding community. Give full particulars. Address W. C. G., care HARDWARE WORLD.

FOR SALE OR EXCHANGE

We have for sale or exchange the following:

- 1 New Era Gas Engine, No. 1078, 15 H. P.
- 20-inch Crescent Jointer.
- 1 86-inch J. A. Fay & Eagen Band Saw.
- 1 L. G. McKnight 24-inch Sander.
- 1 Pony Planer, 24-inch.
- 1 Boring Machine.

Machines complete with counter shafts. This machinery has been in use about six months. The cost today would be from \$1500 to \$1600. We will sell it for \$850 or exchange it for hardware, automobile or truck.

Address Steubenville Hardware & Supply Co., Steubenville, Ohio.

SPLENDID OPENING

for up-to-date reliable hardware and implement store, which we understand is to be found at Silverton, Oregon, a progressive town of 1588 population.

GOOD OPPORTUNITY

for an enterprising merchant in hardware, stoves, household equipment, furniture, is to be found at Eugene, Oregon. This is in the Willamette Valley, seat of the State University, and a splendid agricultural section.

WANTED

Three oil stove salesmen by one of the largest stove manufacturers in the country. Salesmen must have had extensive oil stove selling experience and a clientele. These positions carry responsibilities and the men who can effect large sales are assured a large income. Give experience and references in first letter to receive consideration. Address Box 192, care HARDWARE WORLD.

WANTED

To represent a first class aluminum factory to sell their products on commission basis for the state of Texas. Address Wm. Van Hoogenhuyze & Co., San Antonio, Texas.

FOR SALE

Factory making builders' hardware, plumbing and auto specialties. Fully equipped foundry, machine shop and plating plant. About \$15,000 required to handle. Located in San Francisco. Write Box 217, care HARDWARE WORLD.

WANTED TO BUY

A hardware, or hardware and implement, store in Oregon or Washington state. Prefer location in dry-farming, irrigated, and stock-raising community. Want a business using a \$10,000 to \$12,000 stock. Will pay cash. Write full particulars. Address W. I. care HARDWARE WORLD.

FOR SALE

Stock of hardware, furniture and implements in the Willamette Valley (Oregon) farming district. Will sell on inventory for cash. No trades. Stock will invoice around \$18,000. Will sell or lease building. Business established 22 years, owner wishes to retire. J. R. Peters, Wilsonville, Ore.

BLACK & DECKER

ELECTRIC VALVE GRINDER

"With the Pistol Grip and Trigger Switch"

Used by the Avery Tractor Company, Peoria, Ill., for grinding their big tractor engine valves. "Jimmy McCabe" who is shown using the Black & Decker Electric Valve Grinder says: "The Black & Decker Electric Valve Grinder has any other method beaten all hollow." Jimmy is an expert mechanic and knows what he is talking about.

We also manufacture the well known Black & Decker Portable Electric Drills *"With the Pistol Grip and Trigger Switch."*

New! STANLEY SCREEN HARDWARE BOOK

Prepare for the Screen
Season

Send your customers one of these new books illustrating the Stanley line of screen hardware. This book is furnished to dealers with their name and address imprinted on the cover. Ask for B9 and tell how many.

THE STANLEY WORKS

NEW BRITAIN, CONN.

NEW YORK, 100 Lafayette Street

CHICAGO, 73 East Lake Street

Digitized by Google

Would anyone try to repair a blow-out with a handkerchief—

SOME accessory dealers seem to think that a man parts with his common-sense when he buys a motor car!

How else could you account for the fact that these dealers offer a man flaxseed, corn-meal, glue and such canned "dopes" to repair leaks.

As if a leaky radiator didn't mean trouble enough — **without buying more!**

Unfortunately not every car owner yet knows what harm these "dopes" do in choking the water circulating system.

Wise car owners have learned that "X" is the only scientific Liquid process for making permanent repairs anywhere in the radiator, in the water jacket, pump, motor head, gaskets, etc.

They know that "X" Liquid circulates freely as part of the water—and in 10 minutes "X" makes a metallic-like repair that lasts as long

as any soldering job. And "X" Liquid gets to places that solder can't reach.

One can of "X" Liquid has saved a car owner \$150.00 in repair bills!

No More Rust or Scale—

A Cooler, Better Working Engine

If "X" Liquid is kept constantly in the water it will loosen all Rust and Scale now clinging to the metal walls. And so long as "X" is in the water no new Rust or Scale will appear.

This improves cooling, saves oil and helps the engine perform better.

Keep a can of "X" Liquid handy for emergencies. Keep it in the water and there will never be any cooling system leaks; or any rust and scale, either.

Not a Radiator Cement!

Don't confuse "X" Liquid with radiator cement or flaxseed meals in powder or liquid form. These clog the cooling system and often damage it.

"X" is the only scientific process guaranteed to keep cooling systems LEAKPROOF — RUSTPROOF — SCALEPROOF — and troubleproof. Used by the U. S. Government, Standard Oil, Ameri-

can Telephone & Telegraph Company, Etc.

STANDARD SIZE . \$1.50

Will do a \$25 repair job!

FORD SIZE . . . 75c

Over 25,000 progressive dealers now sell "X" Liquid. Many of them sell "X" Liquid **exclusively**. It is the only product of its kind that works in alcohol or reliable anti-freeze solutions.

DEALERS! Once a car owner knows the facts about "X" Liquid—learns that in addition to repairing leaks scientifically, it eliminates Rust and Scale—he'll never use the halfway measures that simply plug leaks for a while and endanger the cooling system.

"X" Liquid sells easiest not only because it is the biggest advertised, but because it gives a motorist most for his money.

Over 3,000,000 cans of "X" Liquid have been sold. "X" is selling at the rate of over 1,000,000 cans a year! How much of the profits are you getting?

Stock the "X" Liquid Special assortment. It includes an **EXTRA \$1.50 can—FREE**. Also display stand and selling literature. Ask your jobber—or write us direct—today.

Ropeconomy

TALK No. 6

You may pay a little more per pound for Whitlock ALL - Manila Rope, because we pay more per pound for the fibre we use. But—

Your cost per foot is little, if any, higher, —often it is lower, and your work is done more cheaply because Whitlock ALL-Manila Rope has greater strength and life.

Careful buyers, mindful of ultimate “Ropeconomy,” specify—

WHITLOCK

“The Utmost in Rope Value”

Modern Accounting Demands Accurate Holes

The calculating machine does away with the mistakes made by the human brain.

To do this its construction must be just as accurate as its work.

The holes, by means of which part is fitted to part, must be exactly located and precisely drilled.

The ability to do this kind of drilling is built into Detroit Twist Drills.

They make truer, quicker holes, with less regrinding and less cost for power.

*When You Buy, Specify
Detroit Twist Drills*

DETROIT TWIST DRILL CO., DETROIT, U. S. A.

DETROIT TWIST DRILLS

**"How Many Special Forged Wrenches
Will a**

COES 'Key-Model'

**Replace
— and at What Cost Saving?"**

THERE'S food for thought in that question, Mr. Dealer, because the Coes "Key-Model" replaces many different sizes of "set" wrenches. Engineers in boiler rooms figure a big saving in using the "Key-Model" because they had rather save money by buying many wrenches in one, rather than one in many sizes.

But "Key-Model" savings don't end there, the "Key-Model" is made to **conserve material**—not damage it. It saves enough valve bonnets, nuts and unions in the course of a year to prove its economy over and over. It grips large nuts without slipping and performs heavy duty with the least exertion.

And remember, it doesn't jam and batter large nuts as chain wrenches do.

You can sell COES "Key Model" to gas and water works, pipe line companies, refrigerating plants, railroad and machine shops, and all places where heat, steam and moisture prevail.

Sizes: 28", 36", 48" and 72". The 36" size is used by the big coal and iron roads in the United States for regular service. The 48" size is popular in garages, pumping plants and oil pipe line service. The 72" size is supplied on special orders for eye bar bridge erection, or filter press work.

Ask your Jobber to supply you

Get a Grip on Wrench Sales

Sell a good wrench—or better not make the sale. Good wrenches like Pexto, out-grip, out-last and in the end out-sell cheap ones. Stores with a real grip on wrench sales are found to recommend only the best.

Pexto Wrenches are good wrenches with a hundred years' experience built into them. They have the metal, the temper, the design and features to maintain their leadership for another century.

And Pexto Wrenches are known to the general public. National advertising in the Saturday Evening Post has planted the name Pexto indelibly in the minds of hundreds of thousands of people. They can be sold *more* than wrenches—they are ready for the complete line of Pexto Tools—and you can sell them.

THE PECK, STOW & WILCOX COMPANY

Mfrs. Mechanics' Hand Tools, Tinsmiths' and Sheet Metal Workers' Tools and Machines, Builders' and General Hardware.

Southington, Conn.

Cleveland, Ohio

Address correspondence to 233 West Center St., Southington, Conn.
100% American for 100 Years.

Founded in 1819

PEXTO
Solid Handle Wrench

This solid handle Pexto Wrench is made of three strong, simplified parts with heavy wooden riveted handles. The head, bar and handle frame are forged in one piece from high quality steel, next is the sliding jaw, and third the screw.

PEXTO
Solid Steel Wrench

Like its solid handle partner this wrench is made of three simple parts—the head, bar and handle are all forged in one piece from high quality steel. This Pexto Wrench is built for heavy duty.

PEXTO
Pipe Wrench

This Pexto Wrench carries out the highest ideals of Pipe Wrench design. The hardened jaws of steel grip like a vise, yet they are easily tightened or released. When you get a pipe wrench be sure it's Pexto-made.

PEXTO

TOOLS

FOR USE ABOUT THE HOME AND FARM
FOR THE MECHANIC IN EVERY TRADE

From cathedral portal to garden gate—HINGES serve

MASSIVE portals, heavy industrial doors, the humble garden gate and little box lid—*All swing on Hinges!*

Stop and think! How many times each day do *you* use hinges? In building after building, house after house, on cupboard, box or cabinet, hinges continually and quietly mark your progress.

To last indefinitely, to swing back and forth day after day, without sagging, repairs or even a squeak—that is the creed of every McKinney Hinge.

For half a century the McKinney Manufacturing Company has been making hinges and butts. Harmoniously their products have been made to blend with every known architectural design. Unnoticed and unassisted they have effectively and noiselessly served.

In your plans for building or repairs consider the little hinge item seriously. While at first it may seem small, your careful consideration will later be rewarded by years of un-failing usefulness.

See that the name McKinney is stamped on the hinges or butts you buy. Hinge consideration is important.

McKINNEY MANUFACTURING COMPANY, Pittsburgh
Western Office, State-Lake Bldg., Chicago—Export Representation

McKINNEY
Hinges and Butts

Also manufacturers of McKinney

garage and farm building door-hardware, furniture hardware and McKinney One-Man Trucks.

This is the second advertisement in the big national campaign to make 3,000,000 prospective customers think more about McKinney Products. This advertisement appears in The Saturday Evening Post February 7. Other advertisements, appearing in Architects' and Builders' magazines, are swinging this class of buyers to a fuller realization of the McKinney standard.

Like a trip-hammer

These McKinney advertisements are making millions think more and more about McKinney Hinges. Like smashing blows they reach their goal and stamp the name McKinney upon the public mind as a mark by which hinges and butts may be carefully selected.

You, as a dealer, can profit by this well directed advertising. Make sure your customers know you handle the McKinney line.

McKinney products have been on the market for fifty years. They are known as standards by which other similar products may be fairly judged. Establish your store as McKinney Headquarters in your locality. Talk McKinney!

A Word to Buyers

OWING to present manufacturing conditions, we advise buyers of spring hinges to place their orders as far ahead as they can see.

All hardware manufacturers are getting behind in their orders, due to difficulties in the labor and material markets. Railroad shipments are still slow and uncertain.

We do not advise buying for speculation, but to make sure of your goods being delivered when you want them, we urge your ordering now to cover all your needs for the immediate future.

At present we are making reasonable deliveries on practically all lines. Your co-operation will enable us to continue to do so.

ROUND CORD PULLEY CHAIN

PATENT APPLIED FOR

GUARANTEED to operate over any common cord pulley, and is stronger and more economical than sash cord.

Get rid of the troublesome and unreliable sash cord, and standardize on the modern product, the latest thing out—"ACCO" Round Cord Pulley Chain. Guaranteed to operate freely and smoothly over any common cord pulley. Will not kink

Infinitely stronger than sash cord and will not stretch or rot—practically ever-lasting. Costs no more than common grade sash cord.

In case of fire "ACCO" Round Cord Pulley Chain won't burn. It will keep the windows closed, prevent drafts and the spread of a conflagration. Looked upon with favor by fire insurance companies.

"ACCO" Round Cord Pulley Chain

is made of the best steel obtainable, and blanked and assembled on specially designed automatic machines. Its strength is uniform throughout.

The builder likes "ACCO" Round Cord Pulley Chain because there is no waste. It can be cut into exact lengths, and the quantity required checked. You can hang more sash with "ACCO" Round Cord Pulley Chain than you can with sash cord. There's no knotting—it's all used.

"ACCO" Round Cord Pulley Chain is easily handled, and won't deteriorate in stock. It is packed in strong cloth bags containing 100 feet of chain, with 20 weight fixtures—enough for five double hung sashes.

"ACCO" Round Cord Pulley Chain comes in two finishes—Coppered Steel and S. R. P. (Special Rust Proof). Order from your regular jobber. If his stock hasn't arrived, write us direct. We'll give you immediate delivery.

A Strong Wire Staple -- and a Felt Washer

**---Little Things, Yet As Here
Applied They Lengthen Life
And Increase Usefulness
Of Collar Pads**

Pat. in U.S. Dec. 1, 1914
Pat. in Canada Apr. 6, 1915

New Patented Hook Attachment

A strong wire staple reinforced by felt washer firmly grips hook to body of pad even though cover has been weakened by sweat and long usage. This lengthens life of pad. It is the greatest improvement since we invented the hook. *Used on all our Hook Pads and only on pads made by us.*

Stuffed Collar Pads

are the best safeguard against shoulders of horse being chafed, galled and bruised by collar. They excel the unstuffed kinds which lack the soft, pliable, cushion-like and absorbent features possessed by pads containing our specially prepared composite stuffing.

Low in Price---Long Lasting---Well Advertised

Our sixth campaign of advertising direct to users, through the medium of leading agricultural publications, is on a more extensive scale this year than any previous one. This serves to further the interest of dealers and jobbers.

Dealers are requested to write us for a supply of new books concerning care of horses and containing many valuable emergency horse remedies. Every horse owner will want a copy. Sent Free upon request.

The Value of Quality in Sheet Metal

Toncan Metal possesses a durability unsurpassed by any sheet metal made from iron ore.

It possesses superior forming qualities—seams better. The galvanizing is better than that of most sheet metals and it is uniform in quality—**always good.**

What does this mean to you as a dealer? Just this—Users in rapidly increasing numbers are learning by experience that Toncan Metal is the most economical and satisfactory metal sheet they can buy—and they are spreading the news.

That means business for the sheet metal man who can supply Toncan Metal.

Thousands of buyers of sheet metal are looking for something better—more lasting in sheet metal—They will appreciate an opportunity to secure it.

That's why more and more sheet metal men are stocking—using—recommending Toncan Metal and Toncan Metal Products.

That's why it will pay you every way—to specialize on Toncan Metal.

As if the customer were yourself

STEP into your own store some day as if you were a total stranger.

Imagine yourself a customer for some such item as a $\frac{1}{4}$ -20 **GTD** hand tap which you've seen advertised and expect a good store to carry.

Could **your** store make good? Would they know what a $\frac{1}{4}$ -20 **GTD** hand tap is? Where to find it at once? And how to explain its particular and especial features if you as a customer hesitated about buying it?

If they can do that, it's real merchandising.

Try this little test some day. Look in at yourself from the other man's viewpoint. Get out of the parade and watch yourself go by. It may give you a jolt or two, and it may also put your stock and your store's selling ability a peg or two ahead—where you'd like it to be.

The Greatest Galvanizing Discovery of the Age

Exclusively Developed by the
American Steel & Wire Company

A new and decided advance in the art of galvanizing wire, resulting in a heavier coat of more lasting zinc that stays on. Either Bessemer or open Hearth Steel. Big wires—more steel per rod—mean longer life and greater strength. Elastic hinged joints—mechanically joined, the only true and enduring way to unite a fabric without injuring the metal. We also put this wire into

Banner Poultry Fence brings big and quick profits to dealers, and great satisfaction to customers.

Banner Poultry Fence is a true woven wire fence and not a netting. Larger wires without increased cost. It is made of 15 and 17 gage wires, instead of 19 or 20 gage wires, as used in old-style fabrics, and has 22 wires in 4-foot height, 16 wires in 2-foot height, making a poultry fence of minimum close space and immense strength.

Banner Poultry Fence Wire is hard, stiff and springy. It carries a coat of zinc put on by the latest method—a discovery, a real improvement in galvanizing—a zinc covering more lasting; it stays on.

Banner Poultry Fence costs about the same as poultry netting in the principal selling sizes, despite the use of heavier wires. The close spaced wires are at the bottom where needed, with gradually increased space at the top, where close spacing is not necessary. Graduated spacing means a

saving which is put into larger wires without increased cost to dealer or consumer.

Banner Poultry Fence saves in cost of erection, because it requires fewer posts, while top and bottom rails are not needed to keep the fence in shape.

Banner Fence makes a neat construction, and forever does away with the ragged, saggy appearance of old-style fabrics.

GIANT

Cuts blasting costs

Giant Explosives will do your customers' blasting better and more economically than ordinary powders or dynamites.

For more than 50 years they have been made in the West by a Western company.

Naturally they are peculiarly adapted to mining, quarrying or engineering operations under Western conditions.

Because of the constantly growing demand for Giant Farm Powders and other Giant Explosives we are looking for live, aggressive dealers in farming, mining and lumbering sections. We help our dealers build up a profitable business. Let us tell you how. Write today.

THE GIANT POWDER CO., Con., San Francisco
"Everything for Blasting"

Branch Offices: Denver, Portland, Salt Lake City, Seattle, Spokane

EXPLOSIVES

A very hard steel ball is pressed into the surface of the forging, at regulated pressure and the indentation thus made varies in size according to the degree of hardness of the metal. This is the Brinell Machine, in connection with which indentations have been taken for every grade of steel in every condition of heat treatment so that it is possible to produce forgings to any desired degree of machineability. Science countenances no guesses or approximations in modern forge practice.

Round Shoulders

IN men and in nuts, round shoulders mean life has been too much for them.

To your upstanding workman, the scarred face of a round-shouldered nut is a mark of disgrace.

So he demands a Billings & Spencer Triangle B wrench because (having a reputation of his own) he likes theirs.

You can safely take a workman's word for what is right in tools.

He will tell you the Triangle B wrench fits his hand as if it were glad to work with him—its steel is tough (not brittle) with a hidden something in its

makeup which means honest years of service instead of dishonest months of trouble.

That hidden something took several thousand men fifty years to make. It is the value behind the Triangle B trade-mark. On a tool, a drop forging or a great machine, it says "Rely on me," and it has said that to the world of industry since the days of the Civil War.

Remember the last time you worked over a difficult nut? Did your wrench slip just a little and make the hard job harder? Triangle B wrenches would have helped instead of hindering—they fit those hard-to-get-at-nuts, cleanly, surely, without a slip.

Your hardware dealer or your garage accessory man will approve your judgment when you say Triangle B or Billings & Spencer.

He likes to sell satisfaction.

The Billings & Spencer Co Hartford

The First Commercial Drop Forging Plant in America

The machinist says:

"Sure I'm using them, the same as most of the men in the shop are doing. Some of the Starrett Tools in my kit, I bought when I was an apprentice.

"Y'see, it's like this. We got the habit when we were kids. We saw the older men, the ones that were doing the finer work, preferred Starrett Tools because they knew they were accurate, and we copied after 'em — just like our kids are doing today.

"How's that? No, I wouldn't go so far as to say that Starrett Tools by themselves will make a good machinist, but I'll say this — Starrett Tools will make it a lot easier for any machinist to do good work.

"Yes, I've got one of their 'Starrett Data Books for Machinists,' and believe me, it saves a lot of time and mistakes. If I want to know a decimal equivalent, a taper dimension, the speed of a milling cutter, or something about materials, I don't have to guess or ask — I just look in the book and find out. It set me back seventy-five cents at the hardware store, but it saved me a blame sight more than that in the first week."

More Than "WETPROOF"

THE WETPROOF process, applied to all Remington UMC shotshells, does more than maintain the shells in their original condition after immersion in water. WETPROOFING keeps the powder qualities of Remington UMC shells **permanent**. As a dealer in shotshells you know how important it is for the sportsman to have a shell in which the powder is in the same condition as when the shell came from the manufacturer. The WETPROOF process waterproofs the body, crimp and top wad, effectually sealing the shell and making it virtually air-tight. Thus, the powder is kept in its original condition both in wet and dry weather.

The WETPROOF process was originated and developed by Remington UMC and is exclusively owned by them. It is merely another indication of Remington UMC leadership in the firearms and ammunition field.

All Remington UMC shotshells are made under the WETPROOF process—'Nitro Club' and 'Arrow' (smokeless powder) and 'New Club' (black powder). Sportsmen know these shells and ask for them.

BOTTOMING

MUELLER

The "Big 3"

PIPELESS FURNACE

Why called the "Big 3"? Because three big and exclusive construction features are mainly responsible for its heating efficiency and fuel economy. Three features have established the Mueller's superiority.

The "**BIG 3**" Are Sales Clinchers and Business Builders for You

BURNS ANY FUEL — ECONOMICALLY

The Mueller Pipeless burns hard or soft coal, coke, wood, lignite or gas. Saves from a third to a half on any fuel used.

It is guaranteed to heat every room, upstairs and down, comfortably. Requires attention but once or twice daily. Keeps air in the room moist and clean.

1. **Large and Properly Proportioned Register Face.** Insures delivery of big volume of warm moist air and rapid distribution of heat to every room in the house.

2. **Spacious, Unobstructed Air Passages**—Permit withdrawal of large volume of cool air from rooms while delivering an equally large volume of warm air into them.

3. **Vast and Scientifically Designed Heating Surface**—Insures full benefit from fuel burned. Prevents hard firing, overheated castings and big fuel waste.

You get in the "Big 3" features of construction, basic selling arguments not found in any other pipeless furnace. Rightly used they will bring you the very cream of the pipeless furnace business in your territory—will make you the dominant furnace dealer.

We have laid the groundwork for this big trade by extensive advertising in national and farm papers covering your territory. Home owners and home builders everywhere are being educated to the efficiency and economy of the Mueller, the "Big 3" Pipeless Furnace. Thousands of Muellers are installed in every section of the country.

You will want to know more about our plans, our co-operation and specially attractive dealer proposition. Write today for the Mueller Book and full details of our agency offer.

The Business Is All Around You

HARDWARE men get satisfaction in handling Stewart Clipping Machines. They are quick sellers, good profit makers, and call for only moderate investment.

Cow and horse owners get satisfaction in operating Stewart machines. They clip quickly and easily; their work is thorough; they are always dependable.

The spring clipping season is just ahead, with many selling opportunities for Stewart No. 1 Machines for cows, horses and mules. Same machine for all, with no change in knives or adjustments.

A clipped horse works better, looks better and feels better than his unclipped mate. Any horse owner who clips will tell you it pays big.

Cow clipping in the spring is just as essential as horse clipping, and adds to summer comfort—in fact, the Stewart Clipping Machine is good for cows all through the year.

**SOME ONE WILL SELL A LOT OF STEWART
CLIPPING MACHINES IN YOUR LOCALITY THIS
SPRING—YOU CAN GET THIS BUSINESS**

Put the machines in your window—let people know you have them—use our new hangers and folders—ask us for cuts. Every cow, horse and mule owner a possible customer.

Another Money Maker

There will be more shearing with Stewart Shearing Machines this season than ever. Get your share of the business by being prepared to supply your customers from stock.

Hand blade shearing wastes money—a Stewart Shearing Machine gets 15% more wool after the most expert hand shearer has done his best. The extra wool from even a small flock will pay for the machine the first season.

**STOCK STEWART MACHINES—DISPLAY THEM
QUICK SALES—GOOD PROFITS**

YOU can get the shearing machine business in your community. Ask us for hangers, folders and cuts to help sales. Write for Catalog No. 68 if you have inquiries for power machines.

**Order Your Stock From Your Jobber NOW

CHICAGO FLEXIBLE SHAFT COMPANY

5604 Roosevelt Road, Chicago, Ill.

**THE
ROCKWEAVE
WICK**

**CANNOT
CREEP
OR STICK**

Outer and inner perforated tubes hang inside the Enamelled Chimney Drum. These admit just enough air, which passes through the perforations into the space between the tubes where the flame is rising. Thus a gas forms and burns into a hot blue flame.

Within the inner tube a column of air rises through holes in the discs, coming out at the top under the dome. There it is finally heated and comes out of the hole in the dome as gas which creates another flame at the top—a flame within a flame. Hot and blue, right under the utensil, without smoke or smell.

Odor in oil burning often comes when first lighting a burner. This is because oil has seeped onto the chimney tubes from the wick, which in old styles always sets in oil.

In the Nesco Perfect Oil Cook Stoves the wick in the burner bowl is lifted right out of the oil, the oil is all burned out; hence there can be nothing but perfectly dry chimney tubes.

The toggle joint operation means perfect control of raising and lowering.

The lifting device is a great convenience. Pressing down the lever raises the chimney, giving space to apply the match. Then lower to position again.

Simplicity of operation, ease, economy, safety. These are characteristic of Nesco Perfect Oil Cook Stoves.

UNIVERSAL

WHY You Should Push UNIVERSAL

A few of the many publications that are carrying the Universal Story to Millions of Readers in 1920.

This advertising is working for you—coat off and sleeves up—telling your home folks about UNIVERSAL Home Needs.

UNIVERSAL advertising is universal, in fact as in name. Its influence is as broad as the continent, reaching possible buyers in every city, town, village and cross-road section. It draws trade to dealers everywhere. This spring UNIVERSAL advertising will be more extensive than ever before. It will liberate the dollars for the benefit of dealers who are prepared to sell UNIVERSAL Home Needs. It is the rudder that will steer buyers to the ports of supply. It will work for you night and day if you'll make your store a part of the great UNIVERSAL Idea.

UNIVERSAL advertising plays no favorites. It is as impartial and democratic as the shining sun. It benefits the big dealer in the big city and the little dealer in the small town.

Prepare for the big trade that is bound to come.

BALDWIN ^{DRY}_{AIR} REFRIGERATORS

**BALDWIN REMOVABLE CLEANSABLE
AIR FLUES.**
Patented.

This cut shows our fine patent removable air flues, giving access to all parts of the refrigerator for cleaning. They are made of stout galvanized sheet steel, securely locked to sides of refrigerator, and so shaped as to render them strong and proof against the rough usage of the average ice man; a radical improvement over the usual flat, loose piece of metal sliding in a groove used by competitors and ruined by the ice man in a few days. Ours is the strongest, most convenient and effective system of movable air flues in the market.

MAGNETIC CLOTH

The Most Complete Domestic Help Device Known

It instantly removes Grease, Burned Foods and all dirt from all kitchen ware. ALSO cleans Vegetables, New Potatoes, Sweet Potatoes, Carrots, Parsnips and such like. ALSO Tile work, Marble or Brown Stone Steps and many other things too numerous to mention. ALSO is used extensively for cleaning stained and greasy hands, for instance in machine shops, garages, etc.

These are the days of progress and efficiency. The woman in the kitchen is no longer satisfied with the old-fashioned, back-aching methods of cleaning greasy pots and pans; MAGNETIC CLOTH is now the active housemaid that saves time and labor and conserves sweetness of disposition. The kitchen sink of the modern housewife is no longer complete without a MAGNETIC CLOTH hanging on a hook.

The MAGNETIC CLOTH is as pliable as cloth, entirely as efficient as the best abrasive. Made to slip on the hand like a mitten. After using, rinse in warm water and hang up by the loop, to dry.

As a magic wonder this MAGNETIC CLOTH is demanded everywhere; its market is wide and insistent and it is a logical, inevitable profit-maker for the merchant who reads and heeds the mind of his trade.

Dependability

Your Greatest Asset and Ours is Alike

With each year in business you adhere to a policy that will build a name for dependability. By so doing is your guidance to buyers more sought, your service more appreciated.

With each year's advance towards a greater perfection in the gunsmith's art, the great Colt factories maintain a leadership early attained. But the achievement of each year, no matter how crowded with laurels won, is never considered complete. It is only a means for reaching still further perfection in the next.

Hence is the name COLT on firearms your assurance of being able to maintain without question your asset of dependability year in and year out.

STANLEY "EVERLASTING" CHISELS

Blade, Shank and Head One Piece of Solid Steel

This not only insures great strength and durability, but enables the full power of the blow struck by a hammer or mallet to be transferred directly from the head to the cutting edge.

The Blade is forged from one end of the steel rod, the other end being upset to form the Head.

A leather washer (A) is placed between the head and the handle. This acts as a cushion, relieving the handle from shock when a blow is struck, thus preventing same from splitting. A Brass Ring (B) is driven into the large end of the handle, providing an additional safeguard.

The illustration shows the general construction of all "Everlasting" Chisels.

A Line that will attract attention

STANLEY RULE & LEVEL CO.

Teaching American Boys to Buy Good Tools

MANUAL training courses in our schools are teaching boys and young men how to do good work with tools.

These boys, as a result, are coming to appreciate good tools more than ever. They make up a class of tool-buyers that it is distinctly worth while to cultivate.

We are telling these young amateur carpenters and wood-workers about the quality of Disston Saws and Tools.

To do this, we are using the magazines to which they look for information on mechanical subjects—"Popular Mechanics," "Popular

Science Monthly," "Scientific American," and "Industrial Arts." We send the Disston message to more than three-quarters of a million readers of magazines of this kind. The exact number of subscribers is 781,067. These boys constitute by no means a small market for sales of quality saws and tools.

Telling this market the story of Disston Saws and Tools is another instance of our thorough cultivation of all classes of buyers to increase public demand for high-grade saws and tools.

Next month we will tell you how we reach another class of tool-buyers—the "handy man around the house."

Disston Saws and Tools are constantly advertised in magazines and agricultural publications with a total circulation of 8,497,008 copies each issue.

Superior Casement Adjuster

For windows that open out
Operates without disturbing the screen

Superior Casement Adjuster is the most convenient to operate because all that is required to unlock and move the window is to simply move the handle; when you let go the handle the window is locked automatically.

Superior Casement Adjuster is the strongest because it locks on the rod fastened to the window and thus combines the strength of the two rods.

Superior Casement Adjuster holds the window firmly at any angle and does not allow the window to rattle.

SIMONDS SAW

(PRONOUNCED - SIMONDS)

A Leader in France Pacemaker at Home

Our boys over there knew a good
saw and they speak right up for the
Simonds.

They demanded Hand Saws that were
Mechanically Right and, of course, they
specified the Simonds Saw. They
wanted saws that would cut right and
hold their cutting edge, so they selected
Simonds goods.

These same saws which Uncle Sam
called for are the kind that will satisfy
your customers. They excel in quality
and lead all others in profit to dealer
and value to customers.

ONLY BOMMER

DOUBLE ACTING SPRING BUTT HINGES

have the weight supporting bearings correctly located to liberate the action of the springs, reducing breakage and increasing spring power, preventing unequal wear of the barrels, and giving practically unlimited durability.

Bommer Floor Surface Spring Hinge

Has Release and Holdback Features, Ball Bearing and Alignment Device

The most durable hinge of its type; holds the door open when swung to 90 degrees. The spring-action can be entirely released so door will swing free, without spring-action, by inserting a wire nail (when the door is open) into a hole provided in the side plates. The spring-action can be restored by withdrawing the nail.

Is This Opportunity Yours?

There are still many populous communities in this country where the townspeople are all wishing that someone would open a neighborhood sharpening station.

Is your community one of them?

If so, your Hardware store is the logical spot to locate said station. A

Hatfield Complete Sharpening Machine

will have the neighbors in your store in crowds, all clamoring to have their safety razor blades, scissors, shears, household cutlery, and everything else sharpable sharpened.

Think it over and send for our catalog "Evidence" telling how others have made from \$5 to \$12 profit with their "Hatfield" and our "Wonder" Auxiliary Sharpening Attachment.

HYFIELD MFG. COMPANY

The Auto-Wheel Coaster Arouses Nation Wide Interest

How Would You Like to Have 10 Extra Salesmen — Without Cost ?

You can have this extra force, without any sales cost. They will be an energetic group—pushing your products with enthusiasm.

In order to get this sales force all you need to do is to install a line of

Auto-Wheel Coaster and Auto-Wheel Roadster

Then the boys will form an organization called the Auto-Wheel Coaster Club and will seek new members for the organization. And each member must have an Auto-wheel wagon to become a member.

Write for details of our plan of helping the boys form an Auto-Wheel Coaster Club in your town. We advertise to interest the boys. We send them to you to buy. And then we help the organization of the Auto-Wheel Club to increase your sales in a direct way.

When you handle the Auto-Wheel Coaster you are selling the finest boys' wagon in the world. The Auto-wheel Coaster has a nation wide reputation. The Convertible Roadster, the newer item of the line, is two wagons in one—a feature that has aroused unusual interest in boys' circles.

Clamp One to Your Counter

It's quite probable that many of the customers who enter your store are live prospects for an

"Enterprise"

Meat-and-Food Chopper

For our advertising has created a demand for them. It has focused attention on the "knife-and-plate" cutting principle that is now nationally known to farmer and housewife alike.

But in spite of this, many customers will forget their determination to purchase, until they see the article itself, displayed in your store. Instantly they recognize it as the chopper they intended to buy—the unequalled

"ENTERPRISE"—the one that cuts meat and food without squeezing, mangling or tearing it.

"ENTERPRISE"
Meat-and-Food Chopper
Family Size\$4.00
Larger Sizes....\$6.25 up

Try the experiment yourself. You will find it well worth the small amount of counter space devoted to it. The

"ENTERPRISE"

Sausage Stuffer, Lard and Fruit Press

deserves a place on your counter, too, for no other article has ever proved itself so valuable to the farmer who makes his own lard and sausage. The housewife will find it equally useful in making jellies, fruit-juices, etc.

Bender Street

Hamilton, Ohio

A Good Rope— Oceanic Manila

MOST so-called Hardware grades of Manila Rope omit the word "Manila," manufacturers well knowing that this particular grade is composed largely of colored Sisal fiber. The appellation of "Hardware Rope" has been misused and abused. It is unfair to a fraternity having a higher sense of quality in rope than any other class because larger distributors.

OCEANIC MANILA is 100% Abaca Fiber. A good rope, well made and quoted at as low a price as any Pure Manila Rope can be consistently offered. Has no equal in anything in a second grade on the market and a trial will be convincing. It is a departure in rope manufacture that will be appreciated by dealers and consumers where a less expensive Pure Manila Rope is wanted.

Announcement

TO AUTOMOBILE AND TIRE DEALERS—
LIKEWISE THE GENERAL TRADE:

The Thermoid Rubber Co. requires no introduction, its past and present reputation having been for 40 years a national symbol of business integrity and ADEQUATE FINANCIAL resources.

The company advertises very extensively and its name and products are well known by motorists throughout the entire country. Their factories are fitted with the most modern machinery and equipment and a highly paid, scientifically trained organization of picked workmen.

We are assured and we confidently extend this assurance to the many friends of this company that "Thermoid" is a LONG WEARING QUALITY TIRE—ENTIRELY HAND MADE and EXACTLY SUITED to CALIFORNIA TERRITORY CONDITIONS.

The "SELLING PROPOSITION" will guarantee—complete stocks and delivery—distributing rights—and a satisfactory profit.

WHEN *is a PUMP* *not a PUMP?*

WE DON'T KNOW—WE HAVE NONE SUCH

Modern Pumps for the home, farm, factory, or wherever power water conveniences are desired.

We are the acknowledged headquarters for pumping requirements west of the Rockies and our sales volume last year substantiates this condition.

Here is one of our "WINNERS"—a truly modern, efficient and economical pump.

Myers Self-Oiling Bulldozer Power Pump

Fig. 1866

Sectional view showing all parts, including Oiling System, Large Valves and Direct Water-Way.

A single cylinder, double-acting power pump for general service on Farms, Plantations, Country Estates, in Apartment Houses, Hotels, Mills, Factories, Railways, Tanks, Stations, or wherever from 500 to 4500 gallons of water per hour are required against 100 lbs. pressure or 225 ft. elevation. This design has been brought out to meet the general needs of the trade for an efficient, durable pump of modern construction at a moderate price.

LARGE STOCK OF EVERYTHING in the pump line from the small spray and hand pitcher pumps to the deep well pumps and power pumps. Also complete stock of Extras for Immediate Delivery.

SERVICE

Special pump catalogs and special advice willingly supplied upon request.

Cordially yours,

Have You Received Your Copy of the New DUPLEX Folder?

If not, write today for it.

It shows why Duplex dealers are increasing their profits as well as the number of satisfied customers.

It explains the service to dealers—live store displays, posters, moving picture slides, electros for the dealers' newspaper advertising—in fact, every sort of merchandising help that can be given.

It tells how the Duplex dealer can get the full benefit of the national advertising now appearing in the leading women's publications.

Millions of women throughout the country are reading this advertising. Many of them are in your community.

If you are not a Duplex dealer now it will pay you to write for our dealer's proposition.

TIME TO ORDER FREEZERS

All of the three, **LIGHTNING**, **GEM** or **BLIZZARD**, have served the housewives of America for thirty years, and, like the cream they create, are in demand in all seasons.

They are built of the very best material and workmanship possible—their ingenious construction makes them easy to operate, quick freezing, and economical to both dealer and user.

The **Blizzard**, being simpler in construction and cheaper in price, makes it a good running mate with either the **Lightning** or **Gem**. They sell themselves and stay sold! No comebacks or complaints. This means easy, net profits for you.

CHATILLON CUTLERY

The accompanying cut shows one of the various patterns of **CHATILLON BUTCHER SAWS** with flat steel back, beech handle, polished edges, and brass screws.

CHATILLON BUTCHER SAWS are well made, correctly designed and evenly balanced to prevent fatigue when the butcher has sawed for some time.

Our thirty-five years' experience in making butcher saws has taught us that the proper butcher saw should only be heavy enough to cut into the bones properly, made of durable steel that will not warp or snap, and balanced so that it can be handled with ease. That's why we designed the Chatillon Butcher Saw as it is.

Made in all sizes up to 26 in.

ALUMINUM "Real Solid"

ANNOUNCEMENT

The "REAL SOLID" LINE has been for 20 years, the Strong, well known, dependable Aluminum line of Kitchen Utensils.

Our Policy is and has been to give the dealer goods of such quality that assures him not only his PROFIT, but the housewife's continued patronage. We have now added

A New Line of "REAL SOLID WARE"

This is a Heavy Drawn line STAMPED from heavy tempered Sheets, which is far superior, in many ways, especially in Rigidness and Durability.

We have eliminated unnecessary expense of CAST ALUMINUM HANDLES, etc., and are Putting MORE METAL into the BODY of our UTENSILS.

TRIMMINGS—Tinned Iron, using Double Coated Tinned Iron—The best on the market.

PROTECTED HANDLES—All Coffee and Tea Pots with handles, both curved and straight—bottom of handle is protected with Metal Trimmings, so that it will be impossible for flames to creep up over bottom and burn off handle.

OUTSIDE FINISH—The Same HIGH CLASS polish as heretofore.

INSIDE FINISH—Scratch Finish Superior because it does not show finger prints from handling or dirt, which may accumulate while on dealers' Shelves.

We have added 25 New Items, all practical. This makes the "REAL SOLID" Line the most complete on the market

Write Today and get our New Catalog just off the Press.

SAFETY INTERLOCKING STOVE AND FURNACE PIPES

Fire
Preventing

Home
Protecting

Ambrose P. McGuirk's Patent

Our Asbestos-Covered Interlocking Furnace Pipes, Interlocking Stove Pipes, Interlocking Asbestos-Covered Flue Thimble, Interlined Interlocking Ring Flue Caps and Interlocking Elbows are not luxuries nor needless accessories. They are very necessary where stoves and furnaces are used. By fastening and cementing the Flue Thimble in the Flue Hole, and putting in and turning the pipe joint and locking it firmly therein, it can't pull out or be pushed in too far. Each successive pipe link is locked to the receding one, until the whole pipe is firmly locked together, and to the Stove Collar, so that the pipe can't fall down. When the pipe is taken down put in the Flue Cap and lock it, making the flue hole fire safe. Every home and factory owner is morally liable for impending fires on his property, and as fast as flames reap losses will our dealers reap profits on our Fire Safe, Rust Proof, Interlocking Pipes, Flue Thimbles, Caps and Elbows.

Send for Price List and Descriptive Statement.

SAFETY INTERLOCKING STOVE PIPE CO.,

Mirro Serves for Many Years

Finer coffee pot than this 'twould be difficult to find. It has everything that a coffee pot should have—beauty, utility, convenience and a durability which is peculiarly *Mirro*.

Like all *Mirro* Aluminum utensils, it is built for long, long service. And given a little care, it will last a lifetime.

Quite as uniquely *Mirro*, also, are the many features of convenience which mark this coffee pot. They are not found in ordinary aluminum ware. Note them well:

(1) The sure-grip, ebonized, detachable handle which insures comfortable handling and easy pouring. ☆(2) Handle sockets are welded on, as are also (3) the spout, and ☆(4) the combination hinge and cover tipper.

☆(5) The rivetless, no-burn, ebonized knob. This, with the other star features 2, 4, and 8, belongs exclusively to *Mirro*.

(6) Flame guard protects handle when the pot is on the stove. (7) The famous *Mirro* finish. ☆(8) The well-known *Mirro* trade-mark stamped into the bottom of every *Mirro* utensil, and your guarantee of excellence throughout.

It will increase your satisfaction in *Mirro* excellence to remember always that *Mirro* is the result of more than a quarter of a century's experience in the making of better aluminum ware. At leading stores everywhere, at prices that are truly moderate.

SILVERWARE

One Sale Of Silverware Is Not Enough

The man who declared that a sale of silver flatware was like planting a tree from which later he expected to gather fruit knew what he was talking about. One sale should mean a second sale and a third and a fourth, as other items are added to the original purchase.

Cultivate your client's desire that the interior arrangement of her home shall be harmonious, and be prepared to supply silverware that will supplement her furniture and decorations.

The Only Range Ever Sold with a 20-Year Bonded Guarantee

NOT only do we announce a new model South Bend Malleable Range containing more improvements and exclusive features than have ever been combined in one range before, but we also announce that every NEW MODEL will be backed by the strongest guarantee ever issued in the range industry and insured by a bond issued by the Fidelity & Casualty Company of New York. Can any greater proof be given of the exceptional quality of the NEW MODEL range?

The New Model South Bend Malleable Range

Backed by a Forceful National Advertising Campaign

WE have spent years in the development of this new-type range. We have been sure of every step; of every detail. We have created many special processes and have patented them. We have secured the advice of a nationally known expert on household affairs to be sure we were building the kind of range women want.

When we were sure that the NEW MODEL was all that it should be, we brought in experts in national advertising; experts in merchandising; experts in co-operative sales promotion.

THEIR combined program is now ready. The NEW MODEL will be nationally advertised. It will be backed by a merchandising plan of proven success. It will include a money-making plan for dealers. And note that our ranges are sold through retailers only.

The complete details of the NEW MODEL range and the extensive advertising and selling plan behind it are included in one of the most interesting and complete books ever offered dealers. You should have a copy. In all sincerity we say this book means money to you. Will you send the coupon for a copy NOW?

The Best Electric Iron Made

Retains Heat Longer
Lasts Longer
Beautifully Finished

H. J. GYTE & Co.

PACIFIC COAST
FACTORY REPRESENTATIVES

150 Post St. San Francisco
CALIFORNIA

Lighter, smaller, really easy to run and with greater cleaning suction than the average electric—this correctly describes

BISSELL'S

New Lightweight Vacuum Sweepers

Such a machine will sell readily to farm homes, small town homes and city homes not wired, or who count the cost---these homes are in the great majority.

These new "vac's" make an excellent demonstration. They retail at \$9.00 to \$13.50, depending upon model and locality.

Bissell's "Cyco" Ball Bearing Carpet Sweepers are still the universal *sweeping* device for everyday use.

BISSELL CARPET SWEEPER CO.

Oldest and Largest Sweeper Makers

GRAND RAPIDS, MICH.

New York (25 Warren St.)

Niagara Falls, Ont. (Factory)

Real Mahogany veneer, oil rubbed finish, Rubber Corner Cushions, Nickered Fittings

Gumwood veneer, Brown Mahogany, oil rubbed finish, with Rubber Corner Cushions Nickered Fittings

Gumwood veneer, Reddish Mahogany finish japanned fittings

The Triumph of the Air-Way at Toledo

The record selling of the Air-Way at the Toledo Railways and Light Company drives home the undeniable fact.

The Air-Way is not just *another cleaner*—but a different cleaner than any you have ever seen before.

The quick success of the big Air-Way distributors all goes back to the Air-Way Cleaner—and the instantaneous appeal it makes to the housewife.

A few minutes demonstration of the Air-Way Suction Handle—the Air-Way "Human Wrist" (Universal Joint) and the Air-Way Sanitary Paper Bag is sufficient—the *difference* of the Air-Way is so decisive that you make the sale on the spot.

Will you share in Air-Way profits? Then write or wire immediately for details of the Air-Way selling plan.

THE AIR-WAY COMPANY, TOLEDO, OHIO

The new Air-Way Window Display is a powerful and decorative selling help; it attracts the attention of passersby, compels them to stop, fastens their interest with the buying points of the Air-Way, and brings them inside your store.

A night view of the spectacular Air-Way window display put on by the Toledo Railways and Light Company.

Showing the gorgeous electrical spectacle furnished by the Toledo Railways and Light Building at night. Note the three electrical butterflies which are flying across the left side of the building.

The Air-Way Electric Cleaner

SMOKELESS SHOTGUN POWDERS

They Sell Fastest

THE fact that seven out of every ten shooters use Du Pont Powders should establish one fact of interest to you—

They sell fastest

Stock them and they will move quickly

Stock the complete Du Pont line—Dupont, Ballistite, Schultze—in the popular loads—and you can meet practically all requirements.

Carry the Du Pont line exclusively and you will reduce to a minimum the number of different loads you have to stock. (Many dealers have thus reduced their line to *one-sixth* its original number of loads.) No dead ones. Quick turnover. Greater profits.

And you have the satisfaction of knowing that the powder you sell is made by the oldest, largest and best-known powder-makers in the country, is the result of their 118 years of experience, and can be relied upon—and your customer knows it, too.

The Du Pont Company has worked out a plan to help you promote shooting in your vicinity. Write for details—and on your next order for shells

Fast Turnover

In the average woman's mind there is no question as to the advantages of aluminum ware for cooking. She knows that aluminum is durable and does not chip nor crack.

As the average woman is your best customer, it pays to please her. Give her a good, popular-priced line of aluminum ware from which to make selections.

Put in VIKO, The Popular Aluminum Ware. Viko utensils are exceptionally well made. The designs are thoroughly modern. And the line is complete. Popular prices make for fast turnover, and the satisfaction the ware gives makes for *repeat business*. That last is an important thing to remember. There is no permanent prosperity without it. New York Stamping Company

BROOKLYN, NEW YORK

Are You Getting Your Share?

Hardware World Dealers all over the country are "cashing in" on the new "Harvard" Ball Bearing Truck Caster. Are you one of them or have you overlooked this opportunity to increase your sales?

The new "Harvard" Ball Bearing Truck Caster is constructed of extra heavy gauge steel. The axle is also made of extra heavy steel. The wheel is cast iron. This caster is much lighter than ordinary iron casters yet is practically indestructible. It is unequalled for strength and dur-

ability. The large 5-16 inch ball bearings make them easy running and turning.

Our new "Harvard" Ball Bearing Thread Guard Caster shown below has proved a big seller to shoe factories and mills where lint and threads from the floor are apt to twist around the wheels and prevent free action. Their big feature is the steel guard which prevents this and their 7-32 inch ball bearings.

Every Hardware World dealer should have our descriptive circular No. 105 H. W., showing our complete line. Write for one.

on all
cast iron
fittings*

Facing and Drilling a six inch extra heavy flanged tee. This machine is motor driven and is of our own design.

*If there's a better made fitting
than Grinnell—we don't know of it*

Every piece is perfect because we throw out every one that is not up to our rigid standard. We make them for use in Automatic Sprinkler installations, so they *have* to be exceptionally good or our great contract business would suffer.

That's why they make such nice easy jobs. There's no need to "force" a joint with Big "G". They "make on" as easily as your foot slips into your shoe.

Isn't that the kind of pipe fittings you want to use and sell?

Cut down your stock of costly valves

The L. R. D. Valve with its changeable discs is an all round valve for every service. Gas, oil, air, water or steam.

Ready for prompt shipment

When we say "quick delivery" we mean it. Call, write, phone or wire your orders for Big "G". Fittings and National Pipe—we'll show you some speed. We cut and thread National Pipe to sketch.

GRINNELL  COMPANY

of the Pacific

453 MISSION STREET, SAN FRANCISCO
439 EAST 3rd STREET, LOS ANGELES

Ask the owners of 25 million Grinnell sprinkler fittings

It takes 5,000 houses to shelter the workers who make up-to-date National Cash Registers

THESE 5,000 houses are the homes of more than 25,000 people—a city in itself.

They are good homes, too, because the workers at the N. C. R. factory are intelligent, skilled mechanics who are able to demand exceptionally good living conditions.

The factory in which they work comprises 21 modern buildings, providing over 40 acres of floor space.

It has taken 35 years of the hardest kind of work to develop this tremendous organization—an organization engaged solely in the manufacture of labor-saving machines that help merchants all over the world.

Volume XV

MARCH :: 1920

Number 3

DO YOU KNOW?

Do you know the young fellow who works for \$25 a week and who is wearing a new winter suit that cost \$85?

Do you know the wage earner who loafa because he is afraid if he does too much he'll "work himself out of a job?"

Do you know the housewife who is ashamed to be seen with a market basket on her arm or to carry home a brown paper bundle?

Do you know the factory girl working for \$18 a week who is buying and wearing a \$350 fur coat?

Do you know the man who lets a fresh clerk sneer him into buying a \$15 hat for fear he'll seem "cheap" when he can buy a satisfactory one for \$7?

Do you know the investor who has traded his Liberty Bonds for a promise of a 100 per cent profit in a stock company backed by a dishonest promoter?

Do you know the shopper who says "Wrap it up" instead of "How much?"

Do you know the person who lets the desire of the moment destroy the results of days and weeks of thrift and saving?

Do you know the man who thinks it is not necessary to save?

Do you know the married couple who do not think enough of their children to buy War Savings Stamps for them and to teach them to save?

Do you know the man who says that the government savings securities—Liberty Bonds, War Savings Stamps and Treasury Savings Certificates—are too slow or too small or old-fashioned for his investments?

If you do, you know pretty well what is the matter with the United States.

Every business man should take a certain amount of time for recreation and social life. If he does not do this, he becomes a recluse and an individual bound to take life too seriously. Besides, if you are going to do business with people, you must know people.

MORE "REASON WHY" ADVERTISING WOULD INCREASE SALES OF PAINT

The retail paint trade of the country could easily be doubled. That may sound optimistic, but it is admitted by business men that demand can be created where need exists. If anybody does not believe that the need for more paint exists, let him just casually observe the interiors and exteriors of buildings he passes or enters.

Paint dealers should use more "Reason Why" copy. There is a tendency merely to mention the brands handled and to claim that "we have the best paint" rather than to give reasons why paint should be used.

For instance, most people have a wholesome dread of disease. How many dealers in paint call attention to the fact in their advertising that paints are sanitary agents? That the vapors of drying paint possess real germicidal value in addition to smoothing the finished surface so that no lodging place remains for bacteria, dust and dirt.

The health appeal will sell paint to many people that the beauty and surface protection appeal will not influence.

However, there should be more than one string to the paint dealer's advertising bow. One ad should feature beautiful appearance, another economy in surface protection, another the health and cleanliness features. One appeal will catch one property owner, another some other one.

The best baseball pitchers believe in mixing 'em up, in having a large repertoire and serving the batter with something different every pitch. The paint dealer could take pattern after the pitcher and vary his advertising to use all of the numerous appeals that will induce paint purchases. If this were done, it's a cinch that the assertion in our first paragraph that paint sales could be doubled would be realized.

The equipment of your business is a fair gauge of your success.

"To Be or Not to Be"—Americans

ARE the people of this country to be unadulterated Americans, or are we to be a mixed multitude of mongrels? "To be or not to be"—Americans, that is the question, asks a daily newspaper. It becomes more insistent every day.

We are now in exactly the case of a missionary who returned to this fair land with some harmless looking samples of serpent eggs. The good man laid the samples in an uncovered little box in his library. These innocent looking curios were shown to guests who called at the good man's library.

But one day the missionary came into his warm and cosy library to find young serpents wriggling among his books and on his study table. Having seen their like in India, he perceived that they were exceedingly venomous. They were dangerous reptiles which he had brought over under the eggshell covering of innocence. But the missionary was obliged to exterminate the poisonous pests at once.

Our immigration law is that missionary. Like the missionary, our American spirit has been sincere, kind, neighborly and brotherly. We have been too unselfish to wish to enjoy our blessing of freedom and opportunity only among ourselves. We wanted to share God-given privileges with all mankind.

In this spirit of American magnanimity we sent out the invitation to all peoples, languages and tongues, saying, "Whosoever will may come." People from overseas came by swarms. Year in and year out they came, day and night, winter and summer. Many of these became real American citizens. Many of them took with solemn sincerity the oath of allegiance. Every land on the continent, every country on the globe has made some valuable contribution to the American republic. We are not forgetting that our discoverer himself was a "foreigner." The Pilgrim Fathers themselves were "foreigners" who came here to be Americans through life and in death.

Hatching European Serpent Eggs

But among these swarms of immigrants, Europe shipped over some serpent's eggs. They were warmed in our genial atmosphere and the serpents of anarchy were hatched. Kind-hearted Uncle Sam permitted these hatched reptiles of anarchy to breed and brood till lately he has discovered with consternation that the venomous serpents are wriggling among his libraries in the form of German propaganda books.

Some of them, paid with American money, disseminated their Prussian poison from professional chairs. Munsterberg was one of these. But there were others. And one of the most important things that Uncle Sam can do edu-

cationally is to sweep American schoolrooms clean of Prussianism, sensualistic socialism, Sinn Feinism, Bolshevism, disloyalty and anarchistic industrialism.

Your patient Uncle Sam, more indulgent in this particular matter than wise—in allowing the serpent's eggs to be shipped over here—is now getting gloriously on the job of sending the serpents back to the European nest in which they were originally laid. How much better and wiser it would have been to have some limitation on our immigration law which would have prevented the shipping to these shores of the serpents and their eggs.

Many a free-and-easy citizen has locked the barn after the horse was stolen. But we Americans have a wise proverb which says, "An ounce of prevention is worth more than a pound of cure." Hereafter in our immigration laws we must practice the wisdom of this proverb. **IT IS ESSENTIALLY UN-AMERICAN** to allow persons to come to America who do not intend to be Americans. "To be or not to be"—Americans in our immigration laws—that is the question. Let us make it hard to become Americans, but easy to be Americans after they become.

Let us put up the price of the privilege of being an American citizen, but let us increase the value of being one. Let every immigrant's ticket read, "The moment I cease to live and move and have my being in Americanism, that moment I forfeit my American citizenship!" Let America be known as "the hermit nation" against every form of Prussianism, Red-Russianism, sovietism, syndicalism, De Valera Sinn Feinism and assassination, I. W. W.-ism, and of every other brand of inhumanity and lawlessness. Let America be known as the neighborhood of nations.

Stop Oodling Criminals

If America is better than some other countries, let the people who come in here pay the price of being better people after they come. This is no blood-and-thunder country for gun-toters. It is plain that we have some bluffers among us who think it is. And they put their thinking into practice. And again and again we are forced to witness the awful spectacle that "murder will out." In view of the well-established fact that "murder will out," let us put the murderers in and keep them in. Uncle Sam is not in the business of prize fights or bull fights, but in the beautiful and big business of making American citizens who shall be increasingly useful to themselves and to all the world.

"To be or not to be"—Americans—"That is the question." It is evident that thousands of persons have come from overseas to America

simply and solely to suck the juice out of the plum. Europe vomited them over here out of her sick stomach. They were literally spewed into our civilization. That is not pleasant truth. But it is important truth.

Our Americanism—and, thank God, we Americans still possess the eternal principles of Americanism—but our Americanism needs pruning, fumigation and expurgation. The Christ said: "I will thoroughly purge my floor." That is what the oriental harvester does. He gives the winnowing winds a chance to blow across and through the wheat. That process purges the wheat of darnell, cockle and chaff. America is just now suffering from overmuch chaff. But hope is in the vibrant air, for the winnowing winds are blowing a lot of the chaff back over the sea.

We must have more wheat and less chaff. We Americans must clean our fields and then keep them clean. We have for long been too careless of the Russian thistle and the Prussian nightshade. Whosoever will, let him be an American. But whosoever will not be an American, let him be something else, but let him be somewhere else. Send reds and Prussians and Sinn Feiners back where they belong. That necessity is now upon us. A diseased democracy is no more safe than any other diseased body.

Cancer Is of Slow and Insidious Growth, but It Kills

Anarchy kills. That is its function. It is the deadly cancer which is now running its virus through the veins of this American commonwealth. We are not stampeded nor scared, but we are intelligent enough to be concerned. Americanism must root up these un-American weeds at once. Weeds and corn cannot both flourish at once in the same field. The choice as to which we shall have and keep is now before us.

Just as the war with England and Germany was commencing we walked down the street with a German who had lived in this country for nearly twenty years. We expressed regret that Germany was forcing war on the world. The German at once replied in guttural: "Too bad, but now dat it has begun, I hope England gets it in de neck." A short time after this episode we learned on his own word that this German had been in this country nearly twenty years, but had never taken out naturalization and citizenship papers.

All these years he had been eagerly taking the loaves and fishes from Uncle Sam's generous hands, but he had with studious secrecy avoided everything which would bind him to any sort of loyalty to America or her flag. He does not belong here. He belongs to Germany. The Prussian serpent of militarism dies hard, even on American soil. "To be or not to be"—Americans. That is the question.

A LITTLE LEAK WILL SINK A BUSINESS JUST AS A GREAT SHIP

There are five words that I detest, abhor; here they are: "It doesn't amount to much." You remember the old story of the Holland boy and the leaky dyke—the boy who sat by the dyke all night, stopping the leak with his finger.

There are hardware men who should get their finger on that leak in their business dyke, and then sit up and hold it there until they could devise a method of stopping it permanently.

Beware of the clerk whose secret motto seems to be: "Make a sale; make it honestly if you can, but make it, anyhow!" Any misrepresentation of goods is a dangerous business leak. Stop the leak; the clerk will be more of a success as a reporter for the Daily Yellow Scribbler.

Lack of order will prove a business leak. Time spent in search for misplaced articles is worse than time wasted—it is time murder in the first degree. Order simply must be the hardware man's—as well as heaven's—first law.

Do you appreciate the orderly clerk, the fellow who could put his hands on articles wanted even if the darkness of Egypt fell upon the store? Do you appreciate the clerk who does not even waste paper and string unnecessarily in these days of aviating prices?

Do you appreciate the clerk who keeps his finger on that quitting-time leak by being just as pleasant and useful and effective five minutes before quitting time as he was at 8 a. m.? Quitting-time leak is an awful leak in some stores. "Hope you don't want anything," the faces of the clerks say to some would-be patron; "why don't you get a move on you and come in earlier?"

Little leaks are the business prophets of disaster—they are a wet blanket to legitimate business profits. They grow, like Jonah's gourd, in a night. "It doesn't amount to much!" is a leak-opener, a dyke-destroyer.

Do not be an easy mark for the wholesaler who is a business slacker, who substitutes some inferior brand when he chances to be out of articles ordered.

Do not say: "O, it is only a small bill of goods; I will sell them sometime." Man alive, so will the end of the world come sometime—possibly before you sell those inferior goods.

Watch out for the leak of unnecessary express or freight charges. A little planning and careful forethought will eliminate all that are not absolutely necessary. Only by cutting out the leaks can we have cash ballast in the hold of the business ship.

O. E. Snider has purchased the hardware store of C. I. Hufford at Macdoel, Siskiyou County, California.

MOST MEN NEED TO "TAKE UP THE SLACK"

A rein which is slack is of no value whatever in guiding or directing; a slack guy rope will fail utterly in its purpose to hold a tent pole or a tree rigid, and a slack suspender or garter will only result in the suspension in a loose and sloppy way of whatever should be held up snug and smooth.

The great trouble with the average individual and the reason that so many are just commonplace, is because there is too much slack somewhere.

Slack mental habits which permit wrinkles in a man's business management; slack health precautions which gradually undermine or lessen one's efficiency; slack moral standards that react like a boomerang, and slack ideals which prompt a man to put off until a more convenient season, the very things which should come first in place of last in his curriculum.

The new year is now well under way, and most of us began with some mighty good resolutions as to what we would do and how we would do it. But almost inevitably there is a slack which appears somewhere and sooner or later we find ourselves sagging down or barely holding our own in place of climbing up.

Now, how about it? What is to be done and how will we do it? Some of you will say that it is a matter of determination and will-power; and others will declare that the secret of the whole situation is having a "goal" and aiming directly for it.

You are all right and you are all wrong, for will-power and determination alone have been used all too often unsuccessfully. The incandescent light bulb may determine with all its might to shine, and its ambition may be to send forth a 150-watt glow. And yet the bulb may remain dark or only radiate a mild glimmer. It depends on the current and the current must be steady and strong in order to make the most of the filament in the bulb.

This is in no sense a sermon, orthodox or otherwise, but a business talk, but we are told repeatedly that we must make our bodies a temple fit for the living God, and yet we go about with little thought of this important matter, other than to keep ourselves respectably groomed. All too often we let it go at that.

Your Personal Habits Affect Your Success

Now the life forces which flow through the nerve centers to and from the brain, are what permit clear thinking, the formation of right ideals, the exercise of will-power, and the visualization of a goal. Anything which interferes with the channels through which these life forces flow, interrupts the current just as a kink in the hose lessens, or stops altogether, the water which runs through the rubber artery.

Many a man falls far short of his own success—best simply because some part of his body is out of kilter, a vertebra out of alignment, or a nerve trunk seriously impinged. He wakes up feeling tired and old; his nerves get the better of him; he isn't able to think and to see as clearly as he should; he makes up his mind to do things and earnestly intends to keep his resolution, but before he knows it, he has fallen down badly.

If his automobile acted this way, he would take it to a repair shop and have it overhauled, but, being a man, he doesn't think it worth while to take the same care of his own body that he would of an expensive aggregation of metals, rubber and chemicals. He will have his car put in shape at least once every season, but would look upon it as a waste of money to have himself gone over thoroughly as for a life insurance examination. In fact, he lacks the necessary courage to take up the slack!

When all is said and done, there isn't much use of trying to take a knot here and loop there in the loose cords of life, unless life itself is strong and steady. And that is why it is so necessary to keep the body fit and to make our whole being ready and willing to make us of 150-watt power in place of a mere 25-watt glimmer.

Take up the slack, but begin at the right place. Many a man has started in to correct his business methods, or to put more pep into his affairs only to find out in a little while, that his enthusiasm had oozed at his finger ends. He was like the child who meant to keep awake to enjoy the game, but who somehow, went to sleep on one side and only woke up when it was all over.

Taking up the slack is the only secret of progress, but let us start to take it up in the right place and then it will be an easy matter to take up the slack in the other places which need firm, taut lines to insure a strictly perpendicular attitude. Then, and then only will we be the upstanding individuals which our New Year resolutions hoped and forecasted. And month by month we will see ourselves going on gloriously from strength to strength.

A man may go through life without ever realizing what his biggest opportunity is, and hence fail, so far as real success is concerned. It has been said that out of every ten thousand persons, one thinks; and out of ten thousand who think, one acts.

What we need is more thinkers who will act. In time of peace we prepare for war, and may win a victory for right. So it is with the progressive merchant. In the dull season he prepares for the busy season that is coming, and then, when it does come, it finds him with a full lamp and a trimmed wick.

FACTS FOR MERCHANTS SELLING ELECTRICAL APPLIANCES

From the fact that the resistance of a household electric appliance remains the same under varying conditions of current and voltage, it will be plain from the application of Ohm's law that it is extremely important to use these appliances only on such voltages as they are marked for.

The Practical Application of Ohm's Law in Electricity

Suppose a woman has an electric iron rated 550 watt, 110 volt, and she connects it to a 220-volt circuit. By dividing the number of watts by the number of volts, $550 \div 110$, we find that the current is 5 amperes.

Applying Ohm's law to find the resistance, we get $110 \text{ volts} \div 5 \text{ amperes} = 22 \text{ ohms}$. The resistance of this iron, therefore, will be 22 ohms on any circuit. So if it is connected to a 220-volt circuit, we may expect a different current to flow through it. Instead of 5 amperes, therefore, the current flowing through the iron will be 220 volts divided by 22 ohms, or 10 amperes; and instead of 550 watts the iron would be getting 10 times 220 volts or 2200 watts.

To put an iron which can safely take 5 amperes on a circuit where 10 amperes must pass through it, will result in burning out the iron.

In this connection it should be noted that 660 watts is as much as can be safely taken off an ordinary lamp socket, which is made to take about 6 amperes. To connect a device over 660 watts to the socket would raise the amperes, and the result would be disastrous either to the socket or the wire.

In case you are marketing any device over 660 watts, it should not be sold to customers without the assurance that they have satisfactory wiring for it. In any case of doubt, the matter should be referred to some competent local electrical contractor.

A SALES WINDOW IDEA

Who ever head of a show window taking a vacation? But it has been done. This is a new idea. A man leaves his window bare and puts in a sign saying the window is on vacation. Later he says, while this window is resting: "What shall it do when it returns to work?" Soon thereafter the window blossoms forth with a great showing of seasonable goods and this card says this window is fresh from a vacation with many new ideas, or something to the effect. Who invented it I do not know, but it was successful because it was a change and had people looking for what was coming.

A Chicago hotel has a sign: "Interior Decorations." Very likely it is true.

USING THE BELL SHEEP TO LIVEN UP PAINT TRADE

It isn't because the general run of people lack initiative or have no minds of their own that so many are prone to do what they see others doing. It is merely because most people are busy with their routine duties and do not think of things off the beaten track unless they see somebody else doing it, and that isn't anything especially to their discredit either.

Business men could profitably take legitimate advantage of the human bell sheep tendency more than they do in their solicitation of trade or work.

For instance, a home owner in the 400 block on Van Nostrand Avenue lets his mind get out of the rut for an instant (or perhaps his wife jars it out) and decides to have his house repainted. It looks mighty fine when decked out speck and span in its new coat. Madam puts on a few airs when meeting the neighbors and does her darnedest to make them feel her superiority because her house looks so much better than theirs.

Some of those neighbors will voluntarily take the hint and order their own dwellings re-decorated; but others need more than a mere hint.

Here is where the enterprising dealer in paint should take the center of the stage. He should make it his business to see every lady living in the 400 block; ask her if she doesn't think Mrs. Jones' house looks a lot better as a result of his work; call her attention to the fact that her domicile would be similarly improved in appearance, increased in value and saved from deterioration by similar treatment, and closes by tendering his services.

By thus using Mrs. Jones as his bell sheep, the dealer would be surprised at the number of painting jobs he could book. The next best thing to a personal call is a phone call, and next to that a nice letter to all the home owners in the neighborhood. However, there is nothing so effective as the personal call—the personal touch, some call it. It is generally found that the most successful men in their lines are those that "go out and get 'em."

NEW WAY TO FIGURE PERCENTAGE

"Speaking about profiteering," said Thomas D. Honeyman, "brings to my mind the story of the Scotch shopkeeper, Sandy Macfee, who while talking to the manager of a London store, said: 'Ye'll pardon my askin' ye, sir, but what profits can ye mak' in Lunnon?' 'Oh, as for that,' was the reply, 'on some articles 5 per cent, on others 10 per cent, and on some 20 per cent.' 'Twenty per cent! Man, it's awful!' 'But don't you?' asked the Londoner. 'Nae sic luck,' exclaimed Sandy. 'I can only mak' 1 per cent. I just buy a thing for a shullin' and I sell it for twa.'"

Bolshevism a Menace

(By Rev. Newell Dwight Hillis, D. D.)

RECENTLY in the New York Hippodrome over 500 citizens were assembled. A series of resolutions were presented, addressed to the Government in Washington. These resolutions did not so much suggest or request as demand the deportation of certain enemies of the republic.

Close observers were impressed with a certain restrained anger and moral indignation against those authorities who have charge of these alien enemies. Carlyle, in his "History of the French Revolution," speaks of a public meeting in Paris, at which, he says, "there was a low, menacing undertone of anger that was far more ominous than the protests that broke into words upon the lips of the speakers." The next day brought the riots and the beginning of the Revolution that ended with the guillotining and the beheading of hundreds of men who had ruled France.

Why Are Convicted Criminals Turned Loose to Continue Their Agitation?

Today the American people are not only asking certain questions but in a mood of anger are demanding answers. Alexander Berkman was convicted of a crime against the country—why was he turned loose on bail?

The notorious Haywood, the leader of the I. W. W., was convicted of the crime of assaulting our government. Why is he out on bail, continuing his attacks upon our Constitution?

More than 100 alien enemies were convicted in Seattle, sent to New York for deportation. All but three of them were quietly released, to immediately resume their plotting.

Scores of Bolsheviks were arrested and caught, as the authorities say, "with the goods upon them," and these traitors sent to Ellis Island. Later tons of Bolshevik propaganda were destroyed, and their guns, bombs and rifles taken from these "Reds." Now it seems that these "Reds" were allowed to escape from Ellis Island because they were not guarded, and have returned to their old haunts to prepare new incendiary propaganda and manufacture new bombs.

The Department of Justice has long been familiar with the Bolshevik plots to overthrow this government; its representatives have seen the peril daily growing larger and blacker. What is "the invisible hand" that stays the Department of Justice?

It is now well known that the thing that killed Spring-Rice, the English ambassador, was the intensity of his excitement during those awful weeks when the English government was using every means to prevent the sailing of

Trotsky and his fellow Bolsheviks back to Russia.

Who Was Responsible for Issuing American Passports?

Trotsky said he was returning "to bring on a revolution in Russia and stop Russia's war against Germany." Spring-Rice and the English cabinet knew that if these Bolsheviks received passports from the United States government, they would stop Russia's war against Germany, and he foresaw that Trotsky's release of 2,000,000 fresh German troops would probably destroy the 285,000 British soldiers that fell in the spring of 1918.

As an excuse for giving the passport, it has been said that Kerensky cabled Washington, asking that Trotsky and his followers be allowed to return to Russia. Now Kerensky denies this. It is said that Lincoln Steffens, who was in Halifax, used his influence upon a certain Washington jurist, and that these two men secured passports for 450 Bolsheviks. The American people are asking who is responsible for loosing the Bolshevik wolves upon the Russian sheep? At whose door does that crimson guilt belong? Today, silence is confession!

Radicals Identical With Government Office-holders

The other day a newspaper published the list of the agitators, radicals, revolutionists, apostles of organized discontent, leaders of the propaganda for overthrowing the government of the United States, and then, side by side, printed the names of men holding government jobs, and found that these lists were largely identical.

It is one thing to tolerate the presence of an alien enemy. It is another thing to encourage by release criminals who are the open enemies of the republic. Who is responsible for the failure to deport or punish the Bolshevik leaders in this gigantic conspiracy of murder, pillage and revolution that is simply illustrated by the massacre of the returned soldiers by the Bolsheviks of Centralia? It is perfectly plain that the I. W. W., the pro-Germans, the Communists, the closed shop labor leaders, who talk about "fighting unto death," the Anarchists, syndicalists and seditionists have now massed for a coming day of revolution. The issue of the hour is the destruction of Bolshevism or the life of the republic.

Edith: "Dick, dear, your office is in State street, isn't it?"

Dickey: "Yes; why?"

Edith: "That's what I told papa. He made such a funny mistake about you yesterday. He said he'd been looking you up in Bradstreets'."

Sizing Up the Situation

How Often Does This Occur in Your Store?

(By Bernard W. Kenney)

ED MILLER struggled as he attempted to wrap the articles he had just sold. The customer stood waiting with a serious frown that bespoke impatience. It was an awkward bundle, a coffee pot and a big preserving kettle that was just a little too wide for the paper. At last he managed to tie it up and with a smile he rang up the sale and handed Mrs. Brown her change.

"Thank you, Mrs. Brown; we will send the things over this afternoon."

Mrs. Brown took the change hurriedly and left the store in a very abrupt manner. She took no notice of the clerk's "Thank you." And Ed stood looking after her with a puzzled look on his face.

"What the deuce was the matter, Joe; she acted like she was angry. Did you notice anything?"

"What was it, Joe?" the clerk asked again. "Well, you did it without knowing it," replied Joe.

"Did what?" demanded Ed.

"Why, you made her stand here and wait for her change."

Joe was not critical, his tone was friendly.

"When she came in," he continued, "I thought she was in a hurry from her actions. Then she didn't parley long over her purchases, either; she did all she could to hurry the transaction. Then you tussled with that big preserving kettle and she had to wait until you finished, for her change."

"Why didn't she say she was in a hurry?" Ed did not like to confess he was wrong.

"Because it was not necessary, Ed. By using judgment a clerk can size up a situation without having someone to tell him. Why should she have to go into detail and tell you that a friend was waiting for her at the drug store, or that she was on her way to some club meeting? You have to go by actions some times; people are not obliged to say they are in a hurry. It is the clerk's job to be quick enough to see that they are in a hurry and then deal with them accordingly."

There was a lull in business and several other store salesmen came over to join the discussion. They knew that when Joe had anything to say, it would profit them to listen.

"Mrs. Brown's case just now was not an unusual case," Joe continued, "but even if she had come in with the appearance of not being in a hurry and if she had been slow in making selections of what she bought, it wouldn't have been right to make her wait as you did."

No One Likes to Wait on a Clerk

"People like to have a clerk wait on them but no one likes to wait on a clerk. That's contrary to the established rule of business and when you cause a customer to wait, you are acting in opposition to the buyer's expectations."

"There are times when the purchase is small, you should see that the customer carries it and thus prevent a delivery. Then it is well to wrap the parcel and hand it back with the change. But you must do it quickly, for the quickness and smallness both have a direct bearing in the appeal to make the customer carry the package. But if he has to wait and the parcel is large, a person will generally ask to have you make a delivery with the purchase. Now when you knew Mrs. Brown couldn't carry that big bundle, you should have done the wrapping after she was gone."

Do not keep the customer waiting for her change while you are tying up the package and the package is to be sent. You are sure to antagonize her.

Joe Wilson was one of those genial traveling men who call once a month and with each visit leave a little pep behind them for the clerks to emulate. Joe took to all the clerks and none hesitated to ask his opinion when a problem arose in the store. Thus it was that Ed sought the traveling man's advice about Mrs. Brown.

Joe had watched the transaction carefully and the clerk felt he would be able to throw light on the lady's strange action. He wondered what he had done to make her angry.

"That is good advice, Joe," spoke up another clerk. "We fellows always like to have you talk such things over. Every trip you make leaves us a little wise on some point."

Joe laughed. "Well, boys, it is fun for me. There is nothing I like better than to discuss questions like this. Since you have handed me that bouquet, Bill, I'm going to return the favor by discussing a sale you made just a while ago."

"You were showing a man some razors and do you remember how long it took him to decide which one he wanted? You spent a lot of good time while he fingered the different razors trying to make a selection."

Customers are confused by having too many articles placed before them at once. Did you ever notice how a shoe man makes sales. He brings you one shoe at a time, not even a pair of them, and tries to fit you in that one shoe first so that you will not be confused by several different styles.

"With customers like that you should try to expedite the sale. Don't attempt to hurry the buyer, but endeavor to prevent so much undecision. This man looked at half a dozen razors and took his time testing the different blades. All of which was not good for the razors, and it took your time, too."

Get Customers' Undivided Attention

"You took three or four razors out of the case when he asked to see one. That was a mistake on your part. With so many articles in front of him, the man's attention was split into many parts, instead you should always try to get the customer's undivided attention."

"Had you taken one razor at a time and let him examine it, then replace it again, he would come to a conclusion much quicker than if he has three or four to examine at once. It is just the same with pocket knives. When a selection is made, the customer examines the knife by

itself. You do not confuse him by letting him handle the whole assortment.

"Finally he decided on one razor and made some remark as to the quality of the steel. You immediately flared up ready to defend what you had sold, and thus you opposed his views. Direct opposition is never a good policy, you should respect the customer's opinions even if he is wrong. But contradiction creates antagonism on the part of the buyer and sometimes you will lose a sale because a person objects to having his statement questioned."

"If you work in the opposite direction, and instead of opposing their statements, try to lead them into the path of your own argument unconsciously and in the end they will find themselves agreeing with you. Then they leave with a much better feeling than if they have had an argument."

Arguing Never Pays

"You should have pointed to the trademark of the razor and explained that it was recognized as a standard of the world. You could also have made the offer to replace the razor in case of dissatisfaction. Then he would have bought with the feeling that means future sales—confident. With such a line of talk you make a direct appeal to a man's sense of judgment and if a thing is bought with confidence he will return when he needs something else. But if he buys a thing and leaves the store with doubt as to its quality he will say 'I thought so' when it goes wrong, and most likely he will trade at another store in the future."

Business began to pick up. The clerks broke up the confab and devoted their time to the evening rush. Ed Miller was somewhat surprised a while later, to see Mrs. Brown enter the store again.

"I was in such a hurry this afternoon, I forgot that I need a double boiler." She was shown the various sizes and made her selection.

"I guess my other things have gone. So I'll take it with me; then you won't have to make two deliveries."

Ed wrapped the package and handed it to her without causing her any delay. And with a smile she departed in a far different mood than earlier in the afternoon.

"There," exclaimed Joe, "you see now how Mrs. Brown is under ordinary circumstances. She is very pleasant and agreeable as a customer. But this afternoon she was in a hurry and you made it worse."

"Yes," admitted Ed, "I should have used my head. But you can bet that after this I'm going to 'size up the situation' in every sale I make."

If you can make a customer want to come back you have a chance of making a future profit even greater than the present one.

Boosting the Sale of Refrigerators

Suggestions That Will Help You Increase Your Sales

THEY say that "an ounce of prevention is worth a pound of cure," and this is particularly true of refrigerators. A good refrigerator, installed before the first hot day arrives will result in the saving of quantities of food, and preserving the good appearance of butter, lettuce and other viands which depend on their freshness for their charm.

One of the most important factors in pushing refrigerators is a printed advertisement that catches the eye of the casual reader, and having caught it, presents its arguments in such a way that curiosity changes to interest, and interest to conviction.

Once a man or woman is convinced that an article of merchandise advertised is really needed in the home and that it possesses the qualities mentioned, it is a pretty sure sign that an investigation will follow. Every ad, therefore, should endeavor to arouse in the mind of the reader this interest. Barker Bros., Los Angeles, long known for the "personality" of their advertising, recently said:

"A WOMAN'S WORK, GRAVE SIRS, IS NEVER DONE."

The least we can do is to help make her work easier—to lighten the labor that housework involves. The Blank Refrigerator saves food, and its walls of insulation will help you to save ice. It is a house necessity, essential to the safeguarding of your family's health.

BARKER BROS.

Probably at no time of the year is the refrigerator so necessary as during the canning season, its use being necessary to preserve the fruits and berries until they can be preserved.

The Golden rule, at St. Paul, puts a refrigerator into a typical kitchen in the summer time, and so appeals to the housewife.

The hardware department of The Golden Rule, St. Paul, Minn., showed this very effectively, and at the same time gave extended pub-

This is how Robinson's, at Los Angeles, secures an impression of reliability, of cleanliness and elegance in displaying refrigerators.

licity to their canning materials. A corner of the department was fitted up as a model kitchen, with linoleum covered floor, a gas range and a white enamel refrigerator, together with bottles, jars, tops, rubbers, etc. Here at certain hours of the day, during a special sale, a demonstrator showed the advantages of a gas stove and model refrigerator. Full explanation was given as to the construction of the refrigerator by the capable young woman, and her practical talks on the proper way to conserve ice, and the right arrangement of food in the refrigerator in order to give each its proper amount of frigidity, resulted in the clinching of many sales that would otherwise have been lost.

Getting Trade of Newly Weds

A refrigerator ad that caught the eye of all young people, married, or about to be married, was that prepared by the hardware department of Robinson's, Los Angeles, which read:

If a man loves a woman—that's his business.
If a woman loves a man—that's her business.
If they decide to get married—that's fine business.

But when they are thinking of getting the best Refrigerator to help make comfortable their new little home—that's OUR business.

A few minutes spent in conversation with our refrigerator man will give you much valuable information regarding the points of a good refrigerator. Stop in to see him when you are down town.

ROBINSON'S

They backed this catch advertising with a window display so beautiful and clean looking that it attracted scores who would not think

of stopping before an ordinary display of ice-boxes. The floor was covered with gray felt, and the walls of the room matched the floor tones.

In the background was a refrigerator of highly polished wood, over which was thrown a long drape of purple velvet, with a cluster of red poppies laid on top, and another at the end of the drape, which trailed down along the floor.

At the side was a white enamel refrigerator, with doors open to show the interior. A stone jug on top suggested cool water. Gazing into the refrigerator was a little black-haired miss, and awaiting with interest the results of her investigations was a little black and white dog.

"Special Sale" Not Necessary

Another method of calling attention to the fact that refrigerator time is approaching was adopted by a large housefurnishing establishment in the East, who did not desire to put on a special sale at that time. The manager, in studying the problem, saw that there were six sale days a week, while there were seven days in which merchandise could be displayed. He therefore hit upon the plan of making Sunday Refrigerator Day.

Every Saturday, for a period of six weeks early in the spring, he had all the regular merchandise removed from the windows in the evening, and a special refrigerator trim made. A single refrigerator was shown each time, but there was always a wax model shown beside it, to give it life.

The figures were different each week—husband, wife, grandma, cook, etc., and in each case a card was placed at the base of the figure—cardboard cut-outs could be substituted for the wax figures if desired—among the catchy suggestions being:

WIFE SAYS: The trimmest looking, easiest cleaned and most sanitary refrigerator I have ever seen.

HUSBAND SAYS: We cut our ice bills 25% this month by using it.

COOK SAYS: It saves so many steps, that I'll never take another job where they don't have one.

GRANDMA SAYS: I have used one for many years and always recommend it to all my friends.

DEALER SAYS: For quality, style, economy, practicability and convenience I heartily recommend it.

In addition to these signs there was always another card, with ribbons running from it to the refrigerator, on which was painted in large letters the price of the chest.

A long blue line was drawn through this price, and a substantially lower price printed in red.

At the bottom of the card was printed: "Special price, good only at our regular Monday Refrigerator Sale." Cards were then mailed to a large list of housewives, sent so they would reach them on Saturday, calling at-

tention to the Sunday refrigerator trims and also to the fact that a refrigerator could be purchased at a special price if bought at one of the Monday sales.

Of course it would not be good policy to state in advance how long these sales were to continue, as this would induce procrastination on the part of the householder, and the impression should be given that it would be wise to come down at once and look over the refrigerators while the lines were still complete.

AN ALPHABET OF HEALTH

A—s soon as you are up shake blanket and sheet.

B—etter be without shoes than sit with wet feet.

C—hildren, if healthy, are active, not still.

D—amp beds and damp clothes will both make you ill.

E—at slowly and always chew your food well.

F—reshen the air in the house where you dwell.

G—arments must never be made too tight.

H—omes should be healthy, airy and light.

I—f you wish to be well, as you do, I've no doubt;

J—ust open the windows before you go out.

K—eep the rooms always tidy and clean.

L—et dust on the furniture never be seen.

M—uch illness is caused by the want of pure air.

N—ow, to open the winows be ever your care.

O—ld rags and old rubbish should never be kept.

P—eople should see that their floors are well swept.

Q—uick movements in children are healthy and right.

R—emember the young cannot thrive without light.

S—ee that the cistern is clean to the brim.

T—ake care that your dress is all tidy and trim.

U—se your nose to find if there be a bad drain.

V—ery sad are the fevers that come in its train.

W—alk as much as you can without feeling fatigue.

X—erxes could walk full many a league.

Y—our health is your wealth, which your wisdom must keep.

Z—eal will help a good cause, and the good you will reap.

WORTH TEN TIMES THE PRICE.

The last issue of the "Hardware World" was certainly worth ten times the price you ask for it for a year, and I don't want to miss a single issue.

Arkansas.

SAM G. SMITH.

Pushing Builders Hardware in Early Spring

The normal season for building will soon be at hand, and the necessity for more homes, schools, stores and public buildings is great, and yet, on account of the high prices of labor and material too many are putting off the building of new or the repairing of old premises. This is a decided loss to the hardware dealer, who counts on an excellent profit each spring on his stock of builders' hardware and plumbing supplies.

Co-operative Advertising Desirable

What is necessary in order to combat this delay is an energetic advertising campaign, showing the advantages of building at the present time. Of course the best way for each community to go about this is for the lumber dealers, plumbers, electric supply and hardware dealers to get together in a big co-operative advertising campaign, proportioning the expense in accordance with the relative benefits to be derived from awakened activities.

Illustration of What Can Be Done

When it is not possible to do this, however, a single firm can get excellent results by an educational campaign. This was recently done by Down & Gilmore, Sandy Lake, Pa., a small but hustling city. Before the snow was off the ground they began to advertise in the inter-urban cars, on bill boards and through the local papers. These ads were short and to the point, containing some very sound advice:

A STITCH IN TIME SAVES NINE

Too many people are putting off building. Measured by the time and labor necessary to produce results you can build cheaper than ever before. Money expended in building is likely to prove of better value in a year or two from date than invested in any other line.

READ THE ARTICLE BY ONE OF OUR HIGH SCHOOL BOYS THIS WEEK ON THE SUBJECT OF "THRIFT."

They carried their building campaign to the schools, offering a substantial cash prize to the boy in the high school writing the best essay on the subject of "The Present Need for Building," with special reference to thrift. Extracts from the different essays submitted were printed in their ads from time to time, and the essay of the prize-winner was printed in full.

Their aggressiveness stirred to action the lumber dealers and plumbers, and to the awakening of the business sense, and the practical education of the public was due the credit for the lively building boom that was instituted.

St. Louis Merchant Solves Problem

In order to make a bid for supplying orders large or small, the hardware man should see

that he has a complete stock of everything necessary and that it is neatly arranged where he can place his hands on any wanted article without delay. To his ability to do this will depend his sales to a large extent, since most of his clients will be men of means whose time is very valuable—in their own opinion, at least.

Schroeter Bros., St. Louis, Mo., have solved this problem very effectually. On the second floor they have fitted up a neat sample room. In the center is a long library table, with three or four comfortable chairs.

Samples are displayed in wall cases only. Appointments are made with customers in advance whenever possible, the salesman having learned in advance as much as possible regarding the woodwork and decorative scheme of the house or office for which hardware is required. He then carefully selects such samples as are most appropriate for such rooms and lays them out upon the table. In this way the customer is not confused by having thrust upon his gaze a multitude of patterns, yet there is a wide enough range for him to indulge any special preferences—and after an inspection of the line he seldom cares to look farther.

For a dealer who cannot devote an entire room to this line the more simple arrangement of the William Simms Hardware Co., Minneapolis, Minn., would probably appeal. In this case there is a wall case six feet high and fifteen feet long set in the middle of the floor, back to back with a similar case featuring supplies and merchandise in brass and bronze. In front of the case of builders' hardware is a comfortable seat, so that purchasers can study the samples at leisure while making their selection.

Once the proper setting has been arranged the next thing is to go after trade in an energetic fashion. John J. Snyder & Son, Brooklyn, N. Y., have found one of their most profitable methods to be a careful study of the building permits, after which they write a letter to the architect, using only high grade stationery and being sure that the letter has a personal signature:

Dear Sir: Through the building permit records we learn that your office has furnished plans for building operations in this section.

Should you be commissioned to superintend the erection of this building, we desire to call your attention to our facilities for supplying hardware and many kindred lines such as you will require.

May we not have the opportunity of serving you?

The courteous letter brings many inquiries, and if no reply is forthcoming a salesman is sent to interview the architect personally, with the result that he secures many orders ere his

The window displays which John Hardy makes for the retail department of the Honeyman Hdwe. Co. in Portland have become nationally famous and each is a model and masterpiece. Reproductions of Honeyman windows are no new matter for readers of the **HARDWARE WORLD**, but this builders' hardware display should go down in history with the others.

less hustling brothers know that there might have been a chance for a sale.

But good as are personal letters, and newspaper ads, there is one publicity agent that must never be forgotten, and that is the show window. It appeals to the man who wants to purchase a single door knob, and with equal force to the one who has an order for an entire building.

One of the Best Examples

of such a display was arranged last season by the Honeyman Hardware Co., Portland, Ore. In the center background was the painting of a colonial house set in a large frame of red velvet, over which clambered morning glory vines with hosts of red, white and blue flowers. The balance of the window was draped with yellow cheesecloth, with set-in panels of green velvet on which were shown a number of specimens of builders' hardware. The display was floored with red velvet, with a border of the yellow cloth, on which were placed many little locks, hinges, etc. To the panels on the wall were attached a number of slabs of polished wood, to which door knobs and locks of different designs were fastened. The brilliant color scheme used caused everybody to notice the window as they passed, and the shining array of builders' hardware soon attracted by its own quiet beauty.

A few men have made money out of "schemes"—tricky propositions to ensnare the pennies of the unwary. But all real successes

and the great majority of bank accounts have been built on honest values and conscientious service. Honesty is not merely a good policy—it is an essential of modern business success. In these days, the man or organization that does not deal fairly cannot stay in business. The day of the charlatan and the faker is gone forever. This is the age of "solid" business.

SERVICEABLE TO PAPA

A Red Cross public health nurse in a southern town has found the latest novelty in names for babies. She was weighing a little black youngster.

"What do you call your baby," she asked the grinning young mother.

"Weathah-strips," replied the parent.

"Weather-strips," exclaimed the nurse, "What's the idea, Mandy?"

"We don named her Weathah-strips 'cause she kept her papa outa de draft."

Safe Foundation Principles

Some Important Facts Well to Remember

WHEN any one starts out in any particular line of business, he naturally wants to succeed. The great trouble is that the majority of men do not know just exactly what they want to do, or how to go about it. The fact that there are so many failures in business life among intelligent and well-intentioned individuals, is due to the truth that so few really grasp the foundation principles necessary for success.

Health, vigor, and a pleasing personality, have a great deal to do with winning public favor. These are an introduction, and if the introduction is favorable, the chances of success are more promising than if one has to make a fight for even a hearing.

When any particular line of business is chosen, whether it is ink or implements, vehicles or valentines, drugs or dry goods, a thorough study must be made of that line from start to finish.

No Man Can Know Too Much About His Business

It isn't at all an unusual thing to encounter a salesman who has no intelligent idea about what he is offering for sale, except in the most superficial way.

Any one who expects to make a success must be able to trace his line back through manufacturing processes, to field, forest, or mine and to know the points of superiority, and all the weaknesses of his own and competing articles.

A man may be a regular Lord Chesterfield and so have introduced himself favorably, but if he doesn't understand the goods he is handling, he will not be able to keep up his bluff very long.

Two Types of "Business" Men

Only the other day, two salesmen were met. One was a big, fine, pompous fellow who looked as though he belonged in the million dollar class, but he was just a clerk on a rather moderate salary.

It was surprising until one began to talk with him, then it was evident that he had always contented himself with knowing just enough about his line to squeeze by. Naturally, he was never in line for promotion, and did pretty well to hold his own.

The other fellow was a little, dried-up looking individual with sharp eyes and a firm mouth. He too was on salary—a salary of \$8000 a year. But you couldn't put your finger on a point about the goods he handled that he didn't know. He could tell you all about the influences of world conditions on them, and you couldn't fool him on anything "just as good."

Another foundation principle of success, is the ability to make prompt and wise decisions. Many a man has lost his opportunity because he has stopped and haggled, and hemmed, and hawed, and couldn't make up his mind.

Now, if there was always a plainly marked "Right Road," and an equally plainly marked "Wrong Road," it would be easy to make a choice, but the beginnings of Right and Wrong Roads are so nearly alike many times that it takes rare good judgment to know which to select. In fact, so many times the decisions are so evenly balanced that it is next to impossible to determine just what ought to be done. The great trouble with the majority of men is that they make their decisions without any definite reason for doing so.

Haste So Often Means Waste

When there seems no more reason for doing one thing than the other, it is clearly indicated by good judgment that a decision shall not be made—just yet. In that case, wait over night, or a few hours at least. Do not think that the time is wasted. Every individual has a conscious and a sub-conscious nature.

The conscious becomes confused with overmuch reasoning and interruptions, until the mind is in a yeasty condition, and wise decisions are impossible. Just stand aside and let the matter alone until the fermentation, as it were, tames down. Forget about it!

In the meantime, the sub-conscious mind will get busy and will sort and rearrange and measure and weigh, and after a while you can come back to the problem and the right thing to do will be as clear as day.

Only the other day the writer found it very necessary to locate a certain receipted bill which would prove that a certain claim was unjust. That bill should have been filed, but evidently it was not where it belonged. In the haste of trying to find it, the mind became excited and nervous, and lots of papers were handled over, and unlikely places looked into without avail.

Then reason said, forget it! Hours later, when the sub-conscious mind had had time to do its work, it was but the work of a calm moment to stop and ask silently, "Where is that receipt?" The answer came instantly. "Look in the back of the receipt filing cabinet. It has been drawn in and caught into the mechanism."

An instant's investigation proved the truth of this.

On the other hand, it is a mistake to wait and wait and wait, and sizzle and steam and stew, and wonder, "What shall I do," or "What

is the best to do," or "What if I should make a mistake?" Don't make a mistake. Be sure you're right, then go ahead.

A Common Mistake

One of the mistakes of the individual just going into business and who is anxious for success, and who sees the need of a substantial volume of patronage, is to over-urge sales. This is always unfortunate. It is safe to remember that as soon as the salesman gets anxious, the customer becomes indifferent.

Then, too, if people feel that over-much pressure is being brought to bear on them, they either get offended, or become suspicious. If they are offended, they do not come back; and if they are suspicious that the salesman is trying to force something on to them to make good profit, they do not come back. So the result is the same in either case.

Well to Remember This

The point for the business man to grasp and which is so difficult for him to make his own, is this: That the salesman first, last, and always must get the customer's viewpoint in buying, rather than his own in selling. And if he shows real interest in pleasing the customer and in helping the customer to get what he wants, even if he sends him to another place for it, he will have made a friend and a permanent patron. Self interest is the greatest motive of all, in buying.

One point that many men do not appreciate is that many people approach them who do not really know just what they want. An illustration in point will show the truth of this.

Do Your Clerks Do This

The other day a man with a natural fondness for automobile accessories to go with his car, which, by the way, is the pride and joy of his heart, stopped in front of a window showing a fine assortment of these goods. He examined the window with interest. Then he remembered having seen a certain contrivance for keeping the wind shield free from moisture, advertised. He thought he would like to see it.

He went into the store and inquired for this item. It wasn't in stock. The man behind the counter merely said:

"Sorry, but we haven't got it."

That was all, and the would-be customer walked out disappointed and feeling a little cheap, and as if he had wasted several minutes of valuable time.

Now, if the man behind the counter had been a skillful salesman, he would have said:

"Why, we do not happen to have that in stock—and this is a pretty completely equipped department, too. I'm glad you called my attention to that article. Let me take down the name of it, and I'll see what I can do about

it. What sort of a car do you drive? Have you seen any of those new style trouble lights for evening motoring?"

In five minutes he could have shown that man several things likely to appeal to him, made a sale or two, and the best of all, a friend.

The successful man in business must be cordial and friendly without being over-familiar or presuming, and he must be able to understand a good deal of what is in the other fellow's mind.

Many a business goes on the rocks because of loose collections or inaccurate accounting methods. Today we are hearing a good deal about overhead expense, and we must not forget to take in anything and everything which increases the cost of doing business.

How about that refund made the other day; or that claim for error in a bill rendered; or for an adjustment on a damaged piece of goods? Everything which calls for outlay except the initial price of goods, is overhead and must be provided for in the marking up. Don't forget the interest on the capital invested.

Sound business principles, good judgment and the disposition to study modern business methods, and to master one's own weaknesses will make any man successful. There is money to be made in any line of business. It is merely a matter of going about it in the right way.

Every man will not win every time. One of the elements of success is to be a good loser. By a good loser, I mean, an individual who will grit his teeth and say, "I lost out that time, but I know the reason why, and next time I'll show you what I can do!"

Get down to foundation principles. Get down to bedrock and then build steadily but surely from that point up. Remember that time is your most valuable asset and make use of it to good purpose.

AGE BRINGS WISDOM

A salesman was selling a bedroom clock to a girl.

"I recommend this clock with its illuminating attachment to switch on," he said. "It is a very good thing to tell what time your husband comes home, you know."

"But I haven't got a husband," said the girl.

"Oh, you will have some day," said the salesman.

"Yes, but not that kind of a husband," said the girl.

Then it was that the middle-aged woman stepped forward.

"My dear child, they're all that kind," she said. "Young man, I'll take that clock."

Representative, Not Individual, Government

(By John B. Knox, President of the Constitutional Convention of Alabama of 1901.)

IN establishing this government our fathers steered away from the direct and discredited democracies of Greece and Rome and established here under a written constitution a representative republic which Mr. Gladstone in truth declares was the finest piece of government-making ever struck off by any set of men in a given time!

It furnishes the one successful attempt at government of the people by the people and for the people in the history of the world.

It has succeeded, not as in Greece and Rome, by assembling the people en masse to try cases and pass laws, but by dividing the government into three co-ordinate branches, the executive, legislative and judicial, each separate and independent of the other, and each equal in dignity and in power. More than this, it is one government as to national affairs and foreign relations and many separate governments as it affects the local and domestic interest of the people.

Unsettle this balance, make one branch of the government subordinate to another and you overthrow your constitution and plant seeds for the destruction of your government and the loss of your liberties!

And, mark you, each in its respective capacity is appointed by and is the servant and representative and under the control of the American people!

Now, if the people can appoint a good executive they can appoint good legislators and a good judiciary. The fault, if fault there be, is not with the system, but with people themselves!

II

Again, each department of this government is a trustee to the people both for upholding and for administering its own jurisdiction, not upon Democrats nor upon Republicans, but upon Democrats and Republicans alike, when an issue arises which involves the prerogative of the branch of the government which he is entrusted to administer.

The power to declare war, for instance, is invested by the constitution in Congress, and Congress would render itself infamous should it allow this power to be usurped by the executive! On the other hand, the power of making treaties of peace and other treaties, is invested in the President "by and with the advice and consent of the Senate," and each would be recreant to its duty and unfaithful to its trust, should it fail to perform its proper function!

III

But please observe the power of negotiating and making treaties of peace was not invested in the executive alone. The constitution provides that the President "shall have power by and with the advice and consent of the Senate to make treaties, provided two-thirds of the Senators present concur." In this duty then the Senate exercises quasi executive functions. It is in a certain sense a coexecutive with the President.

Our fathers who rescued from the wilderness the magnificent domain we enjoy—who framed our constitution and established this government, it seems, did not altogether confide in the superlative wisdom and inspired altruism of either department of the government, and hence the system of checks and balances and divided authority provided in the constitution, the wisdom of which is every year becoming more apparent!

An examination, therefore, by the Senate of the terms of this treaty is not a presumption! In doing so, it exercises not only a high prerogative, but discharges a sacred obligation.

Again, by and with "the advice and consent" means more than mere consent. It means that the Senate shall be fully informed, shall be frankly consulted and as in the case of a consulting physician exercise its independent judgment.

If the executive refuses to extend to it the confidence to which it is entitled, the Senate may and should indefinitely withhold its consent until fully informed as contemplated in the constitution!

IV

In the Long Parliament in England and in the States-general in France the legislative branch beheaded the chief executive, usurped every function of government, and assumed absolute dominion with a result which should not, it would seem, invite emulation! But that, you say, was long ago, men are better now. And yet for the adoption of reconstruction measures growing out of the Civil War, we find a partisan majority seeking to override and impeach the executive merely because in the conscientious exercise of his executive prerogative he resisted a movement to place the heels of more than four million slaves upon the necks of their former masters! The message in which President Johnson vetoed this inhuman reconstruction measure is well known, and is one of the ablest ever delivered by any President. He re-

tained Mr. Lincoln's cabinet and endeavored to carry out his policies as the Diary of Gideon Wells, Secretary of the Navy in both cabinets, will sufficiently show. But, what is not so well known is that Mr. Charles Sumner, who led this movement, some years later confessed to Senator Henderson of Missouri, who, with four others, went against his party, and successfully desisted these impeachment proceedings, that, in that vote, he (Henderson) was right, and he (Sumner) was wrong!

But if the dominance of the legislative branch is dangerous, the dominance of the executive branch is more dangerous, as witness our neighbor republic of Mexico! Mr. Diaz, if I mistake not, commenced his administration under a constitution which precluded his being his own successor. With a well-organized machine and an army he persuaded the people to remove the restriction and continued in absolute power practically for life.

Who is so dense as not to know that Central and South America present a constellation of republics with constitutions in form as good as ours, ruled by dictators, who call themselves Presidents, and where it requires an army and a revolution to change an administration?

Napoleon, too, was a man of the people—a man who defied liberty only to overthrow it—and whose beau ideal was not France, but the house of Bonaparte!

Idealism with some executives begins and ends with the I.

V

Danger in "Personal" Government

And, finally, in this day of spirit rappings and world visions, of anarchy and radicalism, of the enshrining of every new fad and dogma simply because it is new, of the wasteful expenditure of billions of dollars of the people's money without any adequate check or commission therefor only to be ground from them later by oppressive taxes, what our country needs in religion and in statesmanship is a new baptism in orthodoxy and in conservatism!

My complaint is not against a political party. All government by the people must needs be party government. The country needs and must have two great parties, not sectional, but national, the one a check on the other, the principles and policies of which are openly stated and sincerely advocated before the bar of public opinion.

Our danger is not in constitutional government, but in personal government backed by secret organizations, which multiply with remarkable rapidity, which are absorbing every branch of business activity, and last, but not least, have invaded and seized even the police power of the government, thereby menacing the whole country with a state of absolute lawlessness!

We have seen that political parties can be patriotic.

We have seen the Democratic party as one man support Mr. McKinley in the Spanish-American war, and the Republican party as one man support Mr. Wilson in the greatest war of all times.

It may be and the time may not be far distant when another coalition of every patriotic citizen without regard to past party affiliations may be demanded for the preservation of our property, of our liberty, and even of life itself!

In the meantime, let us, Democrats and Republicans alike, go back to the constitution, the aegis of our protection, the inherited Magna Charta of our liberty.

Let us make it and enshrine it as our Statue of Liberty! And with united voices let us say to all Bolsheviki, to all open or secret conspiracies against law and order, as Lord Bulwer makes Richelieu to say:

"Around her form I draw
The awful circle of our solemn Church;
Let but man place foot within that holy ground,
And on his head, yea, though he wear a crown,
I launch the curse of Rome!"

HAMP WILLIAMS COMPLETES TWENTY-FOUR YEARS IN BUSINESS

Hamp Williams, of Hot Springs, Ark., has completed twenty-four years in the hardware business in Hot Springs.

In a letter published in a local Hot Springs paper, Mr. Williams recites the fact that he began business with exactly a capital of \$775.00 and succeeded fairly well until 1903, when, as he says, he stopped having his men work for him, but thereafter had them work with him. He said this plan gave a much greater dividend on the capital and much more pleasure. He pays a tribute to the unfaltering fidelity, patronage and co-operation of his employees. A cardinal principle with him has been to so conduct his business upon honor and service, that it was not merely delivering merchandise over the counter, but in giving constructive service to the public, to the schools and churches to help build up the city and country, and to dispense charity wherever needed.

That Mr. Williams' ideas are founded on the right principles is attested by his success.

PRETTY SOFT FOR THE LAWYER

Lawyers seem to get most out of the law. As Roger Dolan says: "I'd rather be the lawyer of an estate than one of the heirs."

The other day a butcher of Mount Vernon, Ohio, walked into a law office and put this question to an attorney: "If a dog comes into my shop and steals a hunk of meat can I make the owner of the dog pay for it?"

"Why, yes, certainly," said the lawyer.

"Well, then," said the butcher, "give me five dollars, for it was your dog."

The lawyer promptly complied.

A few days later the butcher got a bill of five dollars for legal service rendered in the dog case, and which he promptly and good naturedly paid.

The butcher was out the price of the meat. The lawyer was out nothing.

THE "SIDE LINE" PAINT DEALER

When the average retail hardware man, or general merchant embarks in the paint business, he sometimes fails to grasp the fundamental principles essential to the successful and profitable development of a paint line.

The exclusive paint store, or the hardware or general merchant who establishes a large paint department, places in charge a capable and thoroughly experienced paint man.

The dealer who contemplates handling paint as a "side line," however, frequently possesses only a superficial knowledge of paints and their diversified uses. He consequently expects to sell paint as he does jack-knives, tacks or soap.

Paint does not belong in the same class with those commodities, which involve no special detail of use or purpose, and require, therefore, no particular knowledge or selling ability. On the other hand, the intelligent and profitable handling of paint is as simple as the merchandising of any staple commodity, if managed with the same amount of energy and knowledge as would be required in the cases of any line with which the general public is not entirely familiar.

When a man wants a pocket-knife, he simply walks into a store and selects the knife that appeals to his fancy and purse—not discounting the fact, of course, that every sale involves a certain degree of skill and intelligence. But if the prospective customer has a floor to paint, he depends upon the clerk or salesman for correct information and advice as to the paint he should use, number of coats, quantity required, method of application, etc., and may even ask for color suggestions. This attitude on the part of the customer is displayed in practically every transaction involving the use of paint for any purpose.

Sales possibilities are not confined to the particular paint that a customer asks for and buys. An alert, well-informed salesman will both expand his sales and render a most important service to the customer by visualizing the customer's home and making intelligent, helpful suggestions. He may suggest, for example, paint for the walls, varnish or wax for floors and woodwork, varnish stain for furniture, enamel for woodwork, and, in season, paint for screens and porch and lawn furniture. He may very properly—and profitably—suggest, too, the various accessories needed in every painting operation: brushes, sandpaper, putty-knives, shellac, putty, oil, turpentine and the like. Certainly no other line offers greater sales possibilities to the salesman or storekeeper of energy and intelligence.

The more paint knowledge a dealer can absorb, the greater will be the sales possibilities opened up for him; but a general knowledge of the different paints for exterior and interior use is ample for any dealer to start with, provided he has push and initiative to go with it.

Present-day paint literature is so explicit in descriptions and explanations of uses and selling points that no dealer need be handicapped by insufficient information on the subject.

Manufacturers are prepared to offer almost unlimited co-operation to the dealer handling any of their paint lines. Comprehensive educational literature covering every phase of painting and paint selling, practical dealers' helps and, in cases requiring it, individual expert assistance are among the aids at the disposal of all dealers.

TWELVE THINGS WE SHOULD KNOW

1. Every sale made at cost reduces the profit on one profitable sale 50 per cent.
2. Every sale made at less than cost consumes the entire profit of at least two profitable sales.
3. A business that does not show a net gain of 10 per cent on the total volume of business is not making good.
4. If you are not figuring at least 10 per cent depreciation and 6 per cent interest on your total investment, you are fooling yourself into thinking that you are making money.
5. Depreciation and interest are the two items that keep the average man from going to the wall until his equipment is worn out.
6. If you are not paying yourself a good salary each week as manager of your plant, you are doing yourself and family an injustice and wrongfully reducing the cost of production.
7. What you think you know will not increase your bank account.
8. If you don't know why you know, you should get busy and find out.
9. The man who continues to ignore the benefits of co-operation and organization is continually buying oil to grease his way to ruin.
10. Ninety per cent of the men starting in business today without the experience and knowledge of cost and efficiency are failures.
11. Co-operation means more responsibility—more work—but also more results.
12. Yesterday is past. Plug for today and tomorrow.

READ BY EVERYONE, INCLUDING THE OFFICE BOY.

We want to say that we appreciate the "HARDWARE WORLD" as much, if not more, than any periodical that comes to our desk.

We find it brim full of good suggestions and reliable information, and we certainly want a copy of it in every one of the hands of our hardware clerks, including our office boy.

The wonder to us is how you get out a publication of this nature at so small a price. Very truly yours,

F. G. FOSTER COMPANY.

WHERE YOU STAND WHEN SOMEBODY SHIPS YOU DIFFERENT GOODS THAN YOU ORDERED

(Copyright by Elton J. Buckley.)

Every reader hereof has merchandise shipped to him via a railroad from time to time, and more or less occasionally is confronted with some question involving his liability to the railroad for freight on goods he hasn't ordered; or which are different from what he has ordered; or what he should do, in order to play safe with the seller, when such goods come in. The following letter will enable me to say something on the subject:

Albany, N. Y.

Two weeks ago the writer hereof ordered a bill of goods from a New York jobber of whom we have been accustomed to buy for about three years. The goods were ordered by mail and were a line we have been handling for some months. Shipment to be made as usual.

When the goods arrived and were delivered to our store they came in different cases than usual and before paying the charges we opened them and found them totally different from what we had ordered. They were by a different manufacturer and were not in any respect the same thing. Therefore we notified the railroad that we would not accept them and also notified the New York house to the same effect. The railroad took them back and has sent us notices that they would look to us for the freight, and if not paid within a certain time the goods would be sold to pay freight. The New York house has also notified us that they would not accept the goods back, as they were "practically" what had been ordered and they did not have the exact thing and same could not now be purchased. Therefore we are in the position where the New York house is likely to sue us for the price of these goods and the railroad is likely to sue us for the freight. We are not accustomed to law suits, what shall we do?

ROBERTS & LANG.

If the goods sent by the New York house to this correspondent were not what he ordered—I mean if they were different in kind, not merely in grade—he has a legal right to reject them, and the railroad cannot collect the freight charges from him, nor can the New York house collect the purchase price. If the goods were of the kind ordered, and merely differed in grade, the law is different. In that case he would be liable for the freight, but could get it back, together with damages for the difference in grade, from the New York house when it claimed on the purchase price.

I want to repeat and emphasize that. The right of a purchaser of goods shipped by freight differs widely as between cases where the seller ships goods of a kind not ordered at all, and cases where he shipped goods of the kind, but not of the quality. A case which furnishes an example of the first class is where a man ordered chestnut lumber and the seller shipped oak. In that case the buyer had the right to absolutely reject and pay neither the freight nor the purchase price. The court said:

The rights of one designated as a consignee of a shipment, upon its arrival at the point of destination,

are clear enough. It is under no obligation to receive or accept a shipment consigned to it where such consignment was in no way sought, requested or ordered by it. The plain alternative would be to simply reject the tendered shipment and thus advise the carrier company it must look for its freight, etc., either to the consignor or to the shipment itself upon which, under the law, it would be entitled to a lien for transportation charges.

An example of the other class of cases is where a Southern fruit merchant shipped a car of melons north. The melons were of the kind ordered, but the consignee said the sizes were not right and he rejected. The railroad sued him for the freight, demurrage, etc., and the consignee defended on what he thought was a very strong argument, viz.: "I didn't order these melons, and I don't want them and can't use them. The shipper knew what I ordered, and the mistake was his, therefore he should pay the freight." That does seem reasonable, but the court threw it out. It held that he was responsible for the freight and all the other charges (not including the purchase price, however) and that he must afterward get his money back from the shipper if he could. The court said:

When a dealer in Pennsylvania directs a shipper in Florida to ship him a carload of melons, he constitutes the Florida shipper his agent, to employ a railroad to deliver the melons in Pennsylvania, and by reason of such employment the Pennsylvania consignee becomes liable to the railroad for freight and other charges. As a general proposition of law, this is correct, at least where the defense is that the articles shipped were not of the grade ordered by the consignee. In such cases a delivery to the railroad is a delivery to the purchaser, and the consignee must look to the consignor for any defect in the articles or goods consigned. If an article entirely different from that ordered were shipped, we would have before us a different question.

My suggestion to the readers hereof, therefore, is that where goods shipped to them are merely of a different grade, they might as well take them in and pay the freight, for they will have to anyway. They will, however, be perfectly safe, for they will have the goods in hand as security for all claims against the shipper.

The money you save by getting along with less light than you need is money saved at exorbitant expense.

ADVERTISING SECTION CLOSELY NOTED.

In enclosing renewal of subscription to the "HARDWARE WORLD," I want to tell you I find it very helpful and valuable in many ways.

Your advertising section is so well patronized that I find much desirable information in it.

Hardware business is improving and prospects for a big business this year is the best it has been for a number of years.

C. D. HINKLE.

THE CUTTER'S LAST HOPE GONE

(Copyright by Elton J. Buckley.)

The United States Circuit Court of Appeals, which is the next court to the United States Supreme Court, in a decision handed down a few days ago, has apparently killed the last hope of the cutters that some court of high resort would find it illegal to refuse to sell cutters because they were cutters, and to work plans to see that other people did not sell them. The case decided was that brought by Frey & Son, Baltimore wholesale grocers, against Cudahy & Co., manufacturers of Old Dutch Cleanser. The lower court had decided that Cudahy & Co. could not legally keep Frey & Son from getting Old Dutch Cleanser, and a jury gave the wholesale grocery house several thousand dollars damages because they had been kept from getting it. The Appeal Court reverses this and knocks all the props from the cutter's hope.

This case was interesting. It is typical of arrangements which exist between manufacturers and wholesalers in many lines. Cudahy & Co. distribute Old Dutch Cleanser through jobbers, but they send their own salesmen out to get orders from retailers, which are then turned in to jobbers and filled. The Cudahy concern settled on a profit which it thought adequate for the jobber and let the jobbers know that it expected them to get that profit. Most of the jobbers were glad to do it, but Frey & Son, having small selling expense, were satisfied to get less, therefore they sold Cleanser for less than the price Cudahy & Co. had fixed. Whereupon they were—not cut off exactly by Cudahy & Co., but practically so. Cudahy & Co. still offered to sell them, but only at a higher price than other jobbers paid. This of course they could not pay and compete with anybody.

Other jobbers also refused to sell Frey & Son except at the higher price, knowing they would be cut off themselves if they did, and the consequence was that Frey & Son couldn't get any Old Dutch Cleanser and lost their trade on it.

They at once brought suit against Cudahy & Co. on a very ingenious theory. It was that Cudahy & Co.'s refusal to sell them at the standard price, coupled with refusal by other jobbers to sell them, constituted a restraint of competition and an attempt at monopoly, damaging Frey & Son to the extent of the profits which they would have made on Old Dutch Cleanser had they been allowed to get it.

This view was fully upheld by the lower United States Court and a jury gave them heavy damages.

Cudahy & Co. appealed to the United States Circuit Court of Appeals, which, as I said, is one step from the Supreme Court. The Appeal Court said that the above theory of the rights of Cudahy & Co. and the rights of Frey & Son was all wrong; that Cudahy & Co. had done no

more than choose their own customers, and that they were wholly within their rights when they stopped selling Frey & Son. And, naturally, as the jobbers who had also refused to sell Frey & Son except at an inflated price, had the same right to choose their customers, they have done nothing illegal either. I quote the following from the decision; it is the core:

The vital question is whether defendant's (Cudahy & Co.) method of business coupled with the acquiescence of its customers therein by observing its requests or demands to maintain prices was such co-operation between seller and purchasers as amounted to a combination in restraint of trade within the rule laid down in *Dr. Miles Medical Co. vs. Park & Sons Co.*, 220 U. S. 373, and other following cases. We are obliged to hold that that question has been clearly answered in the negative by the Supreme Court in *United States of America vs. Colgate & Co.*, decided June 2, 1919. The court expressly held that the announcement in advance that customers were expected to charge a price fixed by the seller, and that the penalty for refusal to maintain prices would be refusal to sell to the offending customer, plus observance of the request to maintain prices by customers generally, and the actual enforcement of the penalty by refusal to sell to such customers as failed to maintain the price did not constitute a violation of the trust statute. Nothing more was done by the defendant and its customers in this case.

Since the defendant, under the Colgate case, merely exercised the right reserved by the Clayton Act to dealers of "selecting their own customers in bona fide transactions and not in restraint of trade," the plaintiff cannot recover under its charge of unlawful discrimination in price.

This decision (it has not been announced whether it will be appealed to the Supreme Court) practically makes the law uniform. I say "the law," by which I mean the decisions of the courts. The Federal Trade Commission has a different view, but it has not been upheld by any court as yet, in fact, it is in opposition to all existent court decisions on the subject.

The uniform law is: that anybody in the business of selling merchandise of which he has no monopoly, can sell or refuse to sell, as he likes, on reason or mere whim; he can set a resale price for his customers to follow, and while he cannot compel the customer to follow it, he can punish him by cutting him off if he doesn't. Also, after he has cut him off, he can let other customers know that he expects them to do likewise, and if they do not obey, he can cut them off also. In other words, as I have repeatedly predicted would happen, the courts are now in complete agreement that the right of a private trader to choose his own customers cannot be abridged under present law.

NONE OTHER SO HELPFUL.

There isn't a paper that I prize as highly as the **HARDWARE WORLD**. In fact, there isn't a paper or magazine printed that is as instructive to salesmen as the **HARDWARE WORLD**.

Wishing you always the best of success,

AL HERBOTH,

Hoene Hardware Company.

Why Johnson Made Good

JOHNSON began with a large capital. He has a pair of willing hands, a nimble brain, and an observing eye—nothing more!

He soon discovered that there was no satisfaction and little chance of permanent profit doing business in a hap-hazard or unreliable manner. So he made up his mind that his word, his goods and his services should be thoroughly dependable.

Early in the game he was convinced that the man who is pleasant, accommodating and public spirited makes friends.

Profits by Failure of Others

Just the same, he saw several good men go to the wall because they got pinched between the nippers of close markets and slow collections, so Johnson began to figure out how he could take care of matters if such an emergency should face him. He reckoned that he must do three things. First, establish a line of credit at his bank; second, buy only such goods as he could turn over within a ninety-day period at longest, and, third, keep his own business as nearly on a cash basis as possible.

Johnson was called very conservative by some of his competitors and especially by a number of the salesmen who would have liked to take larger orders from him. But Johnson had peculiar ideas of his own and he stuck to them good-naturedly. He knew that there were certain obligations which he must meet in cash regularly. These were rent, salaries, etc., and maturing obligations for stock. To meet these he had to have cash. Part of this cash naturally went to pay for his supplies and out of the profits on the goods he had to meet his overhead and all extras, such as advertising, expansion, adjustments and the unexpected.

Johnson kept his eye on every detail of his business. Remember, he did not nose around and do all of these things himself, nor meddle with the other fellow in an irritating way. He gave his men definite responsibilities and held them firmly to account for results. In this manner he had leisure and freedom for the work of a real business executive—leadership, planning and direction.

Allows Competitors to Cut Prices

Johnson was making headway slowly—sometimes it seemed very slowly. His competitors were doing about the same. Evidently they were not very well satisfied, either, so they began to cut prices. This made Johnson sit up and take notice. He did a lot of figuring and a lot of thinking, but mathematics, as he had learned them at school, showed him that if he slashed off his profit, or nearly all of it, and either got cash or charged the purchase, that the time would come sooner or later when he

wouldn't have cash to meet his own outstanding bills. He wondered what he would do then.

A study of the statistics of success and failure made it very clear to him just what would happen. He would go on the rocks, for his credit and his small emergency savings would soon be used up. So Johnson sat tight and didn't cut prices. It cut him though to see some of his customers go sailing by to other places, and sometimes he was tempted to take a hand in the cutting game, too, but he resisted.

Naturally his sales fell off and that meant his profits, too, but Johnson patted himself on the back and said: "Keep a stiff upper lip, my boy, for at least you are not doing business at a loss. Some day these other fellows will run against a snag and then you will come into your own again."

In the meantime Johnson began to figure out how he could keep people coming to him in spite of the guerilla warfare of the men in his own line. No new scheme occurred to him, but he was careful to buy nationally advertised articles and where possible to get exclusive agencies on them. He began also to figure very closely on his discounts, on advertising aids from the manufacturer, and to require all of his assistants to do their work so well and conscientiously that there would be no loss from returned goods and come-backs.

His competitors were overjoyed at the surprising get-away they were making with the trade and began to reduce the quality of their goods and to employ cheaper help, in the effort to leave a margin of profit by some means or other.

Builds Up a Good Reputation

People began to say that Johnson might be a little high priced, but in the end you got what you paid for and satisfaction along with it. Some of the customers who had wandered, began to return. Johnson greeted them pleasantly, just as if they had never left him. He didn't gush over them, or favor them with any special price concession whatever. He treated them in a strictly man to man, businesslike way.

He happened to know that some of them had run up accounts with his competitors which weren't paid. He governed himself accordingly. He granted short-term credits to reliable people only, and then expected prompt settlement, or after a certain period, interest-bearing notes, which he placed in the bank for collection.

His competitors, who had begun to be worried about their own business, were now overjoyed, for they said, "Johnson has killed himself for sure this time." But again they were mistaken, for Johnson got the cream of the trade and those who dealt with him, who had

none too much cash, paid him as a matter of course.

In the course of five years Johnson was on firm ground. Four of his seven competitors had played the fade-away act, two of the others were just hanging on by the eyebrows, and the seventh was trying to copy Johnson's method, but was rather unsuccessful in doing it, because he had gone with the cutters for a while and offended his customers when he tried to switch back in the main channel again.

Watch Your Net Profits

At the present time Johnson is splendidly prosperous. His maxim is: "Watch your net profits or the sheriff will get you." All in all, his growth success has been steady, but not spectacular. When business is slow, he goes off by himself and analyzes the reason of it. When he discovers the reason, he acts accordingly. When business is good, he is just as earnestly on the job to hold the advantage which is his.

But first, last and always Johnson never loses sight of net profits. That, he declares, is the barometer which suddenly tells him which way the wind is blowing. Evidently Johnson is right, for his townspeople tell with pride of his wonderful rise from nothing to wealth. They are not quite right, for, remember, I told you in the beginning that Johnson did have quite a capital with which to start—not the least of that capital being a proper appreciation of net profits.

This world is but a fleeting show;
A circus with at least three rings.
You stare and twist, and yet you know
You're missing lots of bully things.

FOOLING THE BOSS

Murphy was taking a day off, says an English weekly, and wishing to enjoy himself thoroughly, he walked around to watch "the boys."

The sight of his friend Kelly, working as if carrying a hodful of mortar up and down a ladder was the only thing he took any real pleasure in.

"It's yoursif that's working mighty hard today, Kelly!" expostulated Murphy.

"Whist! I'm just making a fool of the boss!" said Kelly, winking slyly.

"And how are you doing that, Kelly?"

"Sure, Murphy, it's as easy as kissing your hand.

"He sees me going up the ladder with my hodful of mortar and he thinks I'm working. But, Murphy, my boy, it's the same hodful I'm carrying up and down all the time."

The trouble with most fast talkers is that they are slow thinkers.

NEW LINE FOR HARDWARE DEALERS

According to an authority on the subject, there will be 15,000,000 automobiles in operation in the United States within the next twenty years. Even now it is said that the average is one machine to every eighteen inhabitants of the country.

As a rule, shops where materials can be purchased with which to repair or replace torn or worn curtains and tops or broken window lights, or shops making a specialty of doing such repair work for car owners are found only in the larger cities and towns.

Repairs of this nature are not usually difficult. The main thing is to get the material with which to make them.

The hardware store that will carry in stock some rubber top and curtain goods and transparent sheeting will not lack for customers if the proprietor will let auto owners know he is prepared to supply their needs and will suggest to them the desirability of keeping their cars in repair and the simplicity of the work itself.

Curtain windows, particularly, can be made as staple an article of trade in the hardware store as window glass. In fact, it is probable that more auto windows are broken than residence windows. Notice the cars passing with broken lights, then note broken windows in houses; of which do we see the most?

The hardware store should be able to supply not only the individual who may be forced or prefer to make his own repairs, but the small auto trimming and repair shop that would find it a great convenience to buy locally.

NATURAL HISTORY

They were looking at the kangaroo at the zoo when an Irishman said: "Beg pardon, sor; phwat kind of a crature is that?"

"Oh," said the gentleman, "that is a native of Australia."

"Good hivins!" exclaimed Pat; "an' me sister married wan o' thim!"

EX-PRESIDENT ARNDT OF NEBRASKA ADMIRES THE HARDWARE WORLD.

We cannot help but admire the up-to-date, live wire magazine you are publishing. It certainly has the right ring.

We believe the retail interests are always well considered in the pages of the "Hardware World."

Our customers have been keeping busy and our time has been fully taken up by them, but we look forward to a very bright business future.

F. W. ARNDT,

Arndt Hardware Co., Blair, Nebr.

Development of Chain Stores

Expansion of Chain Stores in All Lines Brought Home to the Hardware Merchant.

(Editorial Note: The problem of the chain store—and it is a problem to which the hardware retailer and jobber must give careful consideration—is being brought home to the merchant now as never before.

G. A. Nichols, in a recent issue of *Printers Ink*, discusses the situation, particularly with reference to chain stores in Groceries, Dry Goods, Drugs, etc., but as merchandising problems are practically the same in all lines, we are reproducing this article, feeling sure that it will be read with interest by every merchant, whether he sells hardware, sporting goods, house furnishings or auto accessories.

That the hardware merchant is next in line to feel this competition is apparent

WHAT interest has Woolworth, or any of these chain stores in this town other than exploiting it for all the money they can get out of it? asked one retailer of Evanston.

This is the same old familiar argument that in almost any town in this country you can hear against Sears-Roebuck, Montgomery Ward, the National Cloak & Suit Co. and other retail mail-order concerns.

The very same day that the Evanston retailers were so busy "condemning" the chain store there was made public an announcement to the effect that John R. Thompson, the Chicago restaurant king, had established five cash-and-carry grocery stores in Chicago and expected soon to have a thousand in operation in Chicago and its suburbs. At about the same time the Piggly-Wiggly people announced prospective openings in a number of suburban locations, the Atlantic & Pacific and the National Tea stores kept right on dragging in the people.

It was very apparent that the Evanston retailers had plenty to condemn. Evanston is mentioned only because the thing that is going on there is typical of the development in the chain store situation that are rapidly coming to pass in practically every town of any size in the United States.

All Studying the Problem

Manufacturers and jobbers for twenty years have been studying the retail mail-order problem with the object of helping the retailers meet it. Mail-order competition has been the inspiration—if you want to call it that—behind a great part of the service helps and the selling co-operation given the retailer. This anti-mail-order merchandising, although some of it has been ill advised, was inspired by the soundest of business considerations. For nobody knows better than the local retailer how much Sears, Ward and the others have cut in on his business.

A "Menace" or Not?

The chain store is a thousand times more menacing to the retailer of this country than retail mail-order ever was or ever can be. Let mail-order develop to the absolute ultimate limit, let it squeeze out the last drop of business that its wonderful advertising, its good merchandise and its low prices can bring. Even then it will be getting only a fractional part

of the country's retail business. People will continue buying the bulk of their requirements at retail stores because, as has been said time and again, this is the only natural and logical way to buy. A thing that is overlooked in quarters both high and low is that the mail-order houses have to fight tooth and nail for the business they get. No matter how forceful may be their advertising or how favorable may be their prices they are confronted by the ever-present fact that mail-order buying from the standpoint of the average consumer is a consummate nuisance. If the independent retailer is anything like on the job he can hold his own against mail-order in very fair fashion.

The Chain Store Has No Such Handicap

It is sending chills up and down the independent retailer's back today because it is fighting him not with a catalog but with a store—a store that is in most cases better kept than that of the independent, a store that observes religiously the rules of good merchandising that the manufacturer and the jobber have been striving to get the independent retailer to adopt and that most important of all gives the unanswerable advantage of price.

Price after all is the thing that does the trick. The chain store can camp right alongside an independent retailer, undersell him on standard goods and make money, whereas the same prices with no change in buying and operating conditions would drive the independent into the waiting arms of the sheriff.

Centralized buying is generally ascribed as the thing that gives the chain store its power in this direction.

But this is so only in part. Efficient, economical operation has fully as much to do with it. If this were not true the fight of the independent retailer against the chains would be well nigh hopeless.

As it is, the independent retailer—and this of course includes the jobber—can survive and prosper if he will pay the price. This has been demonstrated in the contest of the independent variety store against Woolworth, Kresge and the other chains in that line. Time was when the variety retailer would think his death knell had been sounded with the coming of Woolworth or Kresge to his town.

The variety man knows today that the coming of Woolworth or Kresge, far from being an unmixed evil, can even mean enlarged opportunity for him. Woolworth's advertising and selling methods increase the demand for variety goods and the variety man can, if he will, get his proportionate share of this increase despite the superior buying power of the chains.

Chain store competition is an old story to variety retailers. Some have gone broke under its advance, but the cause of their failure was psychological rather than financial. For the most part the independent variety store has gone right along getting its share of the business. And nobody is going to call Woolworth or Kresge easy competition, either.

Chain Store Growing

A survey of the entire situation and a study of its possibilities shows that the chain store is growing at an amazing rate and that quick and positive execution must be done in behalf of the independent. It also shows that this competition of the individual retail store can be met but the remedy must be ruthlessly and thoroughly applied. No half way measures will answer. The jobber has got to get in line just as much as does the retailer. If the jobber loses out under the new deal then it will be simply because he cannot or will not read the handwriting on the wall.

The Jobbers' Chance

In a discussion of the packers' dissolution, we stated the case truthfully when we said that the chain store and the mail-order houses formed a greater menace to the grocery wholesaler than did the packers. If the national organization of wholesale grocers had devoted to the chain store proposition some of the work, energy and enthusiasm they have expended in trying to get the government to force the packers to be meat men only they would be vastly better off today. And the retailer would not be scared into any such false moves as "condemning" the chain main. Condemning isn't going to get a retailer very far these days.

The attitude of the wholesale grocers in trying to make the law fight such an essential part of their battles for them while the chains keep marching off with the business calls to mind a story they used to tell about old Governor Eskridge, a Kansas pioneer editor and politician. Governor Eskridge, who published the Emporia Republican which later found it could not survive the competition of William Allen White and his Gazette, was said to have the world's championship as a writer of resolutions.

In the old days, so the story goes, there was fear of an outbreak among some Indians living on a reservation not far from Emporia. The citizens in alarm called a town meeting. Governor Eskridge presided and made a speech,

the net of which was that the meeting should adopt some strong resolutions condemning in unmeasured terms the attitude of the Indians!

While the wholesale grocers were busy trying to get the government after the packers—the result of which will have just about as much effect on the price situation and the retailer's problem as Governor Eskridge's resolutions would have had upon the Indians—the chain store has reached a point of development and power that is almost beyond belief.

Invading Every Town

Just look around you a little bit and you will see chain stores, large and small, invading almost any town of any size and branching out into suburban neighborhoods.

The large chains do not need to put on an advertising campaign to let the independent retailer know they are on the job. The retailer is watching for them, for he knows their coming means trouble for him.

But there is another class of chain which the retailer, giving too much attention to the big fellows, is likely to overlook. This is the small local chain of stores, particularly in dry goods, drugs, groceries and variety goods. You can hardly call them chains, yet that name will suffice for want of something better.

There are in this country thousands of comparatively small chains or syndicates operating all the way from three or four up to a dozen or more stores. It is the same old story in these smaller chains—quantity buying, centralized management and good merchandising. Alexander MacLean of Chicago started out with one drug store and now has ten and soon will open more. There are in Chicago three other drug companies operating a number of suburban stores, and for a druggist in Chicago and in other cities to own and operate two or three stores is so common as to call for no comment.

You see the same thing in dry goods stores. The McAllister Company established a line of dry goods stores in various moderate sized Illinois and Wisconsin cities. Turn where you will and you see grocery companies with all the way from three to half a dozen stores. And as for the variety field this long ago adapted the Woolworth plan to its buying and selling problems. The syndicates in the variety field today are more numerous than in any other.

It is hardly proper to say that these small chains menace the retailer. They are retailers themselves. They differ from other retailers in that they have applied to their own needs the modern methods they have been so sternly taught by the experience of late years.

Collective Buying Suggested as a Menace

Some thoughtful people who have been giving careful attention to this problem from the standpoint of the retailer see his ultimate salvation is nothing more or less than an adaptation of the chain store idea. In other words

the retailer must be enabled to buy to better advantage and thus be able to compete with the chains on the basis of price. Manufacturers and jobbers for obvious reasons do not wish to see the retail business of the country given over to the large chains. For four or five chains to reign supreme over retailing is one thing. For several thousand smaller and yet prosperous organizations to do the country's retail selling is another.

The other day in Indiana the writer had occasion to visit a grocer. He seemed willing to talk and so we had quite a conversation about his experiences. He came clean on a number of things, including an admission that he had boosted prices rather arbitrarily on a few items he sold.

But the main point was that this retailer's gross sales for the year amounted in round numbers to \$50,000. He had an investment of around \$4,000 or possibly a little less. His net profit on this satisfactory turnover was not quite \$3,000 a year. The trouble was that he could not buy advantageously enough to make him a satisfactory margin of profit. He is a pretty fair type of retailer—a hard worker, a good storekeeper and rather an efficient salesman. But if a man can't buy profitably he cannot sell profitably.

"If I could only shave four per cent more from my buying cost," said this retailer, "I could make this store worth while. But how am I going to do it? That is the question. My customers continually quote National Tea prices to me. But if I would attempt to meet them I would have to shut up shop very quickly."

Unjustly Blames the Jobber

This retailer, like a great many others, was inclined to throw the blame upon the jobber and the manufacturer for his inability to buy at a lower price and to ascribe to this the entire responsibility for his condition. His stand of course is unjust. No producer or jobber is going to be able to give quantity prices unless goods are purchased in quantities. Moreover, the retailer's trouble is not altogether one of buying.

He needs to put into effect the efficiency methods and the good storekeeping of his big chain store competitors.

The retailer menaced by chain store competition, no matter what line he may be in, can well afford to pause a moment and note what the variety man did to render himself impregnable against Woolworth's competition. He merely applied Woolworth's methods to his own business and made himself a better storekeeper. Then in many instances he branched out so as to have a greater outlet for merchandise and thus be able to get quantity prices on the things he bought.

Grocers Stripping for Action

"I was talking this thing over with William O'Connell, a grocer friend of mine," W. J. McDonough, a Chicago publisher says. "He agreed with me that the thing to do is for grocers generally to form buyers' exchanges and acquire their goods in quantities. The next thing for them to do is to cut down the size of their stores, have more lines if possible, but a smaller quantity of each in stock.

"They should also cut down on the service. The chain management has just as many clerks in a store as the traffic will stand and pay for and no more. The independent could and should do the same thing. All delivery should be absolutely cut out.

"You never heard of Woolworth delivering goods. If a customer should want any deliveries made she should make her own arrangements with the central delivery and pay the charges for the service. In other words, the merchandise should be delivered f. o. b. the delivery company's truck, and there the retailer's responsibility should cease.

"If the retailer will do this he can fight the chain store successfully until kingdom come. If he won't do it then he may just as well prepare to fold up his little tent pretty soon and silently steal away.

"This centralized buying of which I speak has got to be big enough to cut some real figure. It has to be by whole towns or whole sections of cities. No three or four average retailers are going to be able to get together effectively enough to do much good. The financial part of such an undertaking is not nearly as formidable as it sounds. Maybe here is a chance for the wholesale grocer to save his own bacon. It is worth while for him to think it over at any rate."

Mr. McDonough surely is on the right track in his mention of the jobber. Mr. Grocery Jobber now has his one big opportunity to justify his existence in no uncertain way. He must do constructive work with the retailer, helping him to plan his buying in connection with that of others so more advantageous prices can be given.

Unless the grocery jobber does this, then the retailer is going to combine anyway as far as he is able and buy his goods direct from the manufacturer. The latter way will be more difficult and the chances are many a retailer will fall in his tracks before the thing is over with. Money is the thing that talks.

The grocery jobber is disposed to frown upon retailers' buying exchange. The thing for him to do, however, is not to fight them but co-operate with them and help them get away with what they are trying to do. The result will be a better condition of things for manufacturer, jobber and retailer.

Take a town of 20,000, for example. Why wouldn't it be profitable for a grocery jobber to handle the grocery business of that town having all the transactions with one big organization? The goods could be shipped to a central warehouse operated by the buyers' exchange and each retailer could draw upon this stock as he needed it. The lower price the jobber thus would be able to make would be an effectual carrying out of the live and let live policy.

We asked the head of a big Chicago jobbing house what he thought of the chain store problem and its relation to the retailer's future.

"Why," he replied, "there always will be a field for the retailer. Why should we worry? Our business this year has been greater than ever before—greater in actual quantity of goods sold. The alarmists used to tell us that the retail mail-order houses would knock out the retailer. Now they say the chain store will do it. The retail store is going to stay."

The retail store is going to stay. But this grocery jobber will have to change his attitude or he is not going to get a part in the benefits of the staying. The chain store proposition is widely different from retail mail-order.

The growth of the great chain store systems in this country since the end of the war has been amazing. Almost every week brings the announcement that some new huge aggregation of capital has entered the field. As a reminder to our readers of the financial strength that is lodged in the chains, we append the authorized capital of just a few of the established systems. The figures show preferred and common stocks combined.

United Cigar Stores.....	\$65,000,000
F. W. Woolworth Company.....	62,500,000
J. C. Penney Company.....	15,000,000
Great Atlantic & Pacific Tea Co. (Common, 250,000 shares)	12,500,000
S. S. Kresge Co.....	12,000,000
American Stores Company (Common, 150,000 shares)	9,000,000
J. G. McCrory Co.....	6,250,000
Louis K. Liggett Company.....	6,753,000
Acker, Merrill & Condit.....	5,000,000

But the capital does not always fairly represent the real size of these systems. The number of stores is sometimes a better index to their strength. The Great Atlantic and Pacific Tea Company has 4,159 stores; United Cigars, 1,100; Woolworth, 1,080; American Stores, about 1,100, etc.

A party of young people were amusing themselves by guessing the answers to conundrums. One of them asked, "Why is a pancake like the sun?"

"Because it rises in der yeast and sets behind der vest," was the answer given by a brilliant young Swede.

PRESENT CHANNELS OF ECONOMICAL DISTRIBUTION CANNOT BE IMPROVED

Editor HARDWARE WORLD:

With what facts we have been able to gather, it appears that the Winchester people are trying to do the impossible, viz.: Carry a pail of water on both shoulders.

It is a well recognized fact that in deviating from the ethical manner of distribution of merchandise institutes a chaotic condition. That channel of distribution inaugurated many years ago by manufacturer to the jobber, jobber to retailer and retailer to consumer, has not, cannot, and never will be improved upon, and by that I mean, for the benefit of everybody concerned.

Of course it would be both economical and profitable for the Winchester Co., should they retain all of their jobbing business, that is to say, their enormous distribution to the jobbers, and in addition thereto have some eight or ten thousand retailers (financed as it will be to a very considerable extent by said retailers) but it is difficult to imagine the intelligent jobbers of this country to be so blinded by mercenary motive for a temporary profit, to furnish a rope for someone else to hang them with.

The jobbers, of course, cannot dictate to a manufacturer what his policy shall or should not be, but they must assuredly have the privilege, which those reflecting good judgment will exercise, by refusing to lend their aid and purchasing power to manufacturers who are violating the well recognized policy of doing business in an ethical manner.

Yours very truly,

A. BALDWIN & CO., Ltd.

New Orleans, La.

W. M. Pitkin.

"SURVIVAL OF THE FITTEST"

Editor HARDWARE WORLD:

The Winchester plan, if carried to its ultimate end, will no doubt have a tendency to disturb the present channels of distribution, and the potential possibilities for expansion both in wholesale and retail lines, will be curbed to the extent of the success of this plan. It is a game of the "survival of the fittest," and both retail and wholesale merchants will be compelled to dust off their wares and show reason why they should expect a share of this business. No doubt, for a few years, anyone will have his full share of the business; after that time it may be another story.

Yours very truly,

THE SMITH BROS. HARDWARE CO.,

Columbus, Ohio.

By J. A. Dury.

SUCCESSFUL RETAILER EXPRESSES HIS VIEWS

Editor **HARDWARE WORLD**:

As for my opinion of the recently announced Winchester policy, and what I believe to be for the best interest of the trade, as soon as the matter came to the public, I made application to them for their plans with a view of taking on the agency of my own town, believing that if their requirements were not prohibitive we might handle their lines profitably. They informed us, however, that they had already placed the agency in our town, but that we could continue to handle the Winchester guns and ammunition.

Do we understand that in becoming a Winchester store we lose our identity? To this, I would say no. I would not change the name of my store because I handled their lines any more than I would change the name of my business if I handled any other line.

The next question is, what would be the status of our stores if we wanted to give up the Winchester agency, etc. My opinion is that it would be just the same as giving up any other agency. Of course, I would naturally lose some business but the same would prevail if I give up any established lines.

If they saw fit to transfer their lines to some other dealer, or if they decided to open up their own store, I would be placed at some disadvantage, of course, in having to return to my first love—the jobbers who have furnished me all these years. This, I must say, would be somewhat embarrassing to me, and I do not imagine the jobbers would feel as kindly toward me as they would if I continued to patronize them as in the past.

The next question is, what are the advantages to the dealer from not becoming a member of the Winchester organization? There is always more or less danger in handling any exclusive agency. You work up a demand for the goods in your community, and when you lose it from any cause, you are damaged.

But I consider this particular line more dangerous in that respect than some other agencies, for the reason that it covers so many items. For instance, if I represent one make of saws and I give them up or lose the agency, I can without very much trouble secure another, and the change would hardly be noticeable.

The same would hold good with any other tool or implement. Where there is only one line it can be more easily gotten away from than where several lines are to be considered.

There is another point to be feared, but not necessarily true. That is, after this company has been well placed in the saddle, their policy might be changed, and they, like some other powerful organizations that we have in this country, might undertake to dictate your policy—tell you what you must do, and what you

must not do, tell you how many goods you must sell in a specified time. They might undertake to tell you how many you must buy at one time, and ask you why it is that you are not selling more of their goods.

They might not permit you to handle any other lines that would conflict in any way with theirs, even though you preferred to do so.

But these are all conjectures, but I think it well enough to consider all points pro and con. There are two sides of this question and they are far reaching in their effects. I do not know just what I would have done as to taking their agency after looking into their plans, and I haven't done that except by reading the newspapers and journals. So far it looks very good, but as I have said before, I do not know what the future might bring.

I will, however, content myself for the present by sticking to my first love, the jobbers with whom I have been doing business very satisfactorily for the past 25 years. If it were put up to me to continue their lines as I have heretofore, or take over the Winchester agency and be barred from them, I certainly would continue as in the past.

Very truly yours,

Hot Springs, Ark.

HAMP WILLIAMS.

DO NOT BELIEVE IT WISE TO ASSIST IN UPBUILDING BUSINESS ARISTOCRACY

Editor **HARDWARE WORLD**:

We do not think it beneficial to the retail hardware trade for them to assist in the upbuilding of an exclusive aristocracy, as is desired by the Winchester propagandists.

There can be no general benefit and but little individual benefit through the success of the new hardware retailing scheme and it cannot help be disappointing in the final outcome.

Arguments by the writer would be but a repetition of those already sent.

Yours very truly,

W. H. RICHARDSON & CO.,

Austin, Texas.

By W. H. Richardson, Vice-Pres.

IF SUCCESSFUL WILL GIVE AN ADDED IMPETUS TO BUSINESS

Editor **HARDWARE WORLD**:

Regarding the recently announced Winchester sales policy, it looks to us at this time to be largely experimental, yet should develop the jobber into a better merchant because of this new kind of competition.

If the Winchester policy of preference should prove advantageous to them, they will have created no monopoly, only forcing the jobber as a good merchant to find means of showing preference to his good customers and to give to the merchandising of hardware a new study and perhaps added impetus.

All in all we are satisfied that the Winchester plan is much more of an experiment for the retailer who adopts it than for the jobber who may perhaps be compelled to combat it.

Yours very truly,

SLOSS & BRITAIN,

San Francisco.

Jos. Sloss, President.

DO NOT ANTICIPATE ANY NOTICEABLE DIFFERENCE IN BUSINESS

Editor **HARDWARE WORLD**:

We do not have time to give you the details of our opinion concerning the Winchester sales policy, as the "flu" epidemic has temporarily reduced our force to such a point that those of us still on duty are all trying to do two or three people's work.

To put our opinion in a nut shell, however, will say that we do not believe the plan will be satisfactory to the Winchester factory for any length of time, nor to the so-called "Winchester stores."

So far as the jobbers and the retail stores, which are not classed as Winchester stores, are concerned, we do not believe there will be any noticeable difference in the volume of business they will handle in the ammunition line, although we do not believe that there will be some other lines more generally sold in the future than has been the case in the past, and as the Winchester sales plan does not create any new business, we naturally think that the increase made by other lines will come off from the Winchester business. Yours truly,

THE FRANK COLLADAY HDWE. CO.,
Hutchinson, Kan. Per Chas. S. Colladay.

SUCCESS A MATTER OF CONJECTURE

Editor **HARDWARE WORLD**:

We feel even yet the outcome of the new sales policy of the firm referred to in your letter is too much a matter of conjecture for us to make any kind of prediction with any degree of certainty.

To say the least we cannot feel the new policy is going to be conducive to the same relationship between the jobber as a whole and the company in question as formerly. We simply cannot reason how their relation could be just the same as of old.

A condition is being created wherein it will be decidedly to the dealer's interest to trade directly with the firm in question instead of the jobber, it being impossible for the jobber to meet the terms and prices of the producer and placing him in a rather bad light in the eyes of the dealer.

These seem to be the most outstanding features so far as the jobber's interest is concerned and, to say the least, we can tell better after the plan has been tried out to some extent just what the effect will be.

Yours very truly,
THOMAS-OGILVIE HDWE. CO.,
Shreveport, La. R. J. Ogilvie, Pres.

A haughty spirit or a domineering one is seldom great. It is too much bound up in self to be truly wise. "Wisdom is oftentimes nearer when we stoop than when we soar!"

ATTEND STRICTLY TO YOUR OWN BUSINESS AND NOT WORRY

Editor **HARDWARE WORLD**:

Regarding the Winchester stores or sales plan, I would say this: If you listen to the Winchester salesman's or promoter's side of the question only it looks like a good thing for the retail dealer. When you give the matter due consideration, you find the dealer is obligated to do certain things that the Winchester corporation deem necessary to their success, whether it will be the proper procedure for the success of the individual store or not. In other words, you surrender your right to run your store as your own best judgment tells you to.

As I look at the contract that the dealer signs, it is all one-sided, leaves the Winchester Sales Co. under no obligation to the dealer. Mr. Winchester Store Dealer will find he has signed a contract, that the filling of is not going to be to his liking.

Personally, I believe that it is a scheme to start a chain of hardware stores throughout the country and these dealers that go into it are, figuratively speaking, striking the match to burn their own house.

I am only a small dealer doing a business of \$60,000 per year, but before the name Winchester or any other goes up, the name Thorpe Bros., "Always Busy Store," will have to come down and some other fellow will dictate the policy of this place.

I believe it is to the best interest of the retail hardware dealer to let Winchester Sales Co. work out their own salvation.

Attend strictly to your own business, give good service to your customers, have the goods they need, when they want them, do not be afraid to ask a reasonable profit for your services and you can make your store a necessity to your community, and if you do, your success is assured, and the Winchester Sales Co. need not cause you any worry.

THORPE BROS.,
Versailles, Mo. Frank C. Thorpe.

HELPFUL TO ANYONE IN ANY KIND OF BUSINESS

Editor **HARDWARE WORLD**:

A few days ago I wrote you to discontinue my subscription to the **HARDWARE WORLD**, because I was out of the hardware game for life, but since I received your latest copy it seems as if I like your paper better than ever, and though I do not ever expect to engage in that business again, yet there are a great many articles in your paper which I enjoy reading and which are helpful for anyone in any kind of business.

Even my mother likes to read the **HARDWARE WORLD**.

I am enclosing remittance, for which please renew my subscription for three years, beginning with the March number, and oblige.

Yours truly,
MERTON D. ROBINSON.
California.

DOES NOT BELIEVE ANYONE HAS CAUSE
TO BE ALARMED

Editor HARDWARE WORLD:

The Winchester plan I understand has caused a great furor among the manufacturers and especially the jobbers, and from all accounts the latter are considerably perturbed over the matter and have gone up in the air so high that they all have aviation records backed off the boards.

I am somewhat surprised in their taking it to heart so keenly, as we ought not to be dumb-founded at anything in this age. Great things are transpiring every day. The old order of things have passed away, new and wonderful things are constantly looming up before our vision.

Just here would like to make a suggestion to the jobber-retailer, if there are any who are losing considerable sleep over this new proposition, and I take it there are from all accounts. He had better put his own house in order first, or be a good sport and not squeal.

Personally, I am not surprised at anything these days and am determined to meet things as they come. I do not believe this new scheme (if you please) is going to turn the hardware world upside down, nor do I anticipate any jobbers will be put out of business and no retailer who comes into direct competition to a Winchester store should be put out of business, if he is an up-to-date live wire merchant and if he is not such a merchant, he will get his sooner or later anyway.

As to my opinion in the matter, and as to what I would say that would be of interest to the trade can be summed up very concisely, as follows: Adopt the plan of fearlessness, belief in yourself, honesty, affability and, come what may, your success is assured.

With best regards, I am,

Yours respectfully,

Cleveland, O.

H. B. McGRATH.

A STORM ALWAYS HAS A SCARING LOOK

Editor HARDWARE WORLD:

The Winchester plan has certainly set in motion a lot of jobbing machinery.

If they succeed in lining up eight thousand retailers whom they say will finally invest \$300 each and it develops a contest as to whether the jobber or Winchester Company can do the most for retailers, it would be a good investment for the latter. The retailer will be watching with keen interest to see whether the jobber or Winchester develops the greater love for him in furnishing better terms, price and service.

There are a lot of good drug stores that Liggett does not own.

A lot of money is still being made on cigars that do not go through the United Cigar Store till.

There will be some good retail hardware stores in this country after Winchester has a store in every town over 50,000 population.

A storm always has a most scaring look as it is coming up.

MINNESOTA RETAIL HDWE. ASSN.,

By H. O. Roberts, Sec.

TENDENCY TO CRITICIZE RATHER
THAN TO COMMEND NEW DEPART-
URE FROM ESTABLISHED USAGE

Editor HARDWARE WORLD:

Regarding "The Winchester New Sales Policy," any deductions coming from me must needs be of little value to your readers from the fact that the "New Policy" is more or less not clearly or fully understood by me.

Quite possibly the majority of the great army of retailers of Winchester products are in possession of little more definite information than myself under present conditions.

Upon the face of the new departure there usually arises a quick answer in some form, either of acceptance, rejection or doubt. In matters that are new and not fully understood one is quite apt to criticize rather than to commend.

Viewing the subject, as we might see it, from an angle or standpoint of the jobber or larger interests, being those directly or immediately affected, the lesser retail dealer may, without having a very clear analysis of just how its effect will touch his own interests, question the advisability and success of the movement.

Both personally and indirectly, for over twenty years, I have had dealings with the Winchester Repeating Arms Company. I have found their manufactured goods to be the most reliable, satisfactory and saleable of any similar line. Their fairness in all business matters has been beyond any question and most commendable.

I, therefore, cannot but feel, even though at this time not fully conversant with their New Policy, that their new methods will sooner or later develop a bigger and better business for themselves as well as for the retail dealer.

This conclusion I arrived at, from the fact of my knowledge of, and confidence in their heretofore clean cut fairness to their trade. Further, I have a satisfied conviction that the change in policy has received the same careful consideration and safe guarding methods applied, that has made the Winchester manufactured products famous everywhere.

Respectfully and sincerely yours,

JNO. W. GARRETT,

Colorado Springs.

Sporting Goods.

THINKS CONTRACT ONE SIDED

Editor HARDWARE WORLD:

Just to read over the contract without any explanation from the Winchester side, we would consider it extremely one-sided and as far as we are concerned are going to leave it alone until different information can be had direct from the Winchester people.

Very truly yours,

Hood River, Ore.

E. A. FRANZ CO.

NO QUARREL WITH ANY MANUFACTURER ON POLICY, BUT RESERVE RIGHT TO DECIDE THEIR OWN POLICY

Editor **HARDWARE WORLD**:

With reference to the recently announced Winchester sales policy, we would advise that personally speaking, we think it will make little if any difference in our volume of business or profit account.

Of course, the fact that the Winchester Company will operate as a manufacturer, jobber and retailer precludes the idea of our giving them any assistance in the marketing of their product, as to render our assistance to their plan by handling their goods would be manifestly unfair to their competitors who market their product through the jobber, and we would not be consistent in the attitude we have for years assumed, viz.: that the jobbing channel is the most economical method of distribution for the manufacturer to seek.

The success or failure of the proposed Winchester plan remains to be seen, and it will take several years to work out, but assuming for the sake of argument that their plan will be reasonably successful, the growth of the business and the fact that in the larger cities they will retail their goods direct, whereas in the smaller cities and rural communities there will be certain Winchester dealers, will, we think, tend to strengthen the jobber rather than curtail him.

It is only reasonable to presume that all other than selected stores will be very lukewarm in the pushing of the Winchester products of any description and if Winchester competitors "rise to the occasion" and enlarge their line of firearms somewhat, it will be but a comparatively short while before the dealers and jobbers can ignore the Winchester line completely.

As far as mechanic's tools, etc., are concerned, we have very little fear of Winchester or any other private brand competition, as it takes years to build up a line and even then the old, established manufacturers are not going to throw many roses in the path of the Winchester concern, whose avowed object is to manufacture themselves as soon as they can secure output enough to warrant a factory.

Taking it all in all, it is our belief that whether or not the Winchester plan proves successful, we will still do business at the old stand, the world being large enough for them and for us, too, and there is business enough for both. If they make a failure of their plan, undoubtedly they will be back in a few years asking for the jobbers' support, and it will be our policy at that time to again take up their line where we have now left it off.

In other words, we try to give every manufacturer who works through us the best that we have, and we have no quarrel with any manufacturer who prefers going to the retail

trade direct, but, of course, we reserve the right to purchase from whom we see fit, and we do not care to buy from the man who competes with us by selling to our own trade.

Very truly yours,

Los Angeles.

CALIFORNIA HDWE. CO.

GROWTH OF CHAIN STORE SYSTEM

Editor **HARDWARE WORLD**:

Supplementing our letter of February 9, in reference to the newly adopted policy of the Winchester Companies, which policy we have reason to believe is largely owing to the interests Mr. Liggett, of the Rexall Remedies fame, has acquired in the Winchester Company, we enclose clipping taken from one of our daily papers, showing the phenomenal growth of the chain stores.

When consideration is given to the fact that Sears, Roebuck & Company are doing a much larger volume of business than any of our trans-continental railroads, and that the business of Woolworth & Company, or the Great Atlantic & Pacific Tea Company is largely in excess of the entire wholesale hardware business of the Pacific Coast, some idea of the magnitude of the chain stores, selling direct to the consumer, can be appreciated.

It is beyond the realm of the writer's thought as to how a retailer, having an interest as to the future of his business, can assist the development of this chain store idea by becoming a stepping stone in the assistance of its growth in the hardware lines.

Very truly yours,

CALIFORNIA HDWE. CO.,

Los Angeles, Cal.

Shannon Crandall.

Retail Houses Doing Heaviest Business

Boston, Feb. 13.—Never in the history of chain stores and mail-order houses have sales reached such large totals as were recorded the past year. Not only were the sales of all the companies 22 per cent greater than in 1918, but individual increases show gains as high as 35 per cent. The ratio of increase shown for December over December, 1918, of practically every company averaged close to 30 per cent.

Sears, Roebuck & Company is the premier retailer of them all, its sales for the past twelve months reaching \$257,930,025, a gain of nearly \$60,000,000 over 1918. The only two other concerns in the \$100,000,000-or-over class are Great Atlantic & Pacific Tea Company and F. W. Woolworth & Company, the former with estimated sales for twelve months of over \$180,000,000 and the latter with actual sales of \$119,491,033. Sales of United Cigar Stores were slightly over \$62,000,000 and estimates place United Drug Company's total in the same neighborhood.

Increase in number of stores is remarkable. The Great Atlantic & Pacific Tea Company, the largest retail grocery business in the United States, was operating 3928 stores at the close of its last fiscal year, against 3802 the year before; while Woolworth establishments as of January 1 totaled 1084, compared with 1039 the previous year. United Cigar Stores has 1350 stores, having opened 108 new stores in 1919; United Drug, 207 stores more and 8,000 Rexall agents; American Stores Company, 1,300 or more stores; Jewel Tea 530 branches; Jones Bros. Tea, 333; J. C. Penny, 197; S. S. Kresge, 188; S. H. Kress, 144, and McCrory Stores, 150.

WATCHING THE PROGRESS WITH INTEREST

Editor **HARDWARE WORLD**:

We have studied this Winchester proposition from every angle and have not fully made up our minds as to what the effect is going to be on the trade in regard to the Winchester line. We, however, have taken a stand that we will continue to handle a certain amount of Winchester products and sell them on a jobber's basis the same as we have been doing in the past.

We do not expect, however, to push them, but feel that it would be to our interest to take care of our customers other than the regular Winchester appointed agents. We are also protecting ourselves in the retail department by continuing with them in our wholesale department.

We do not believe that it is going to be a profitable method of distributing sport goods. The public does not seem to be in sympathy with a proposition of this kind, nor do I believe that the appointed agents in the smaller town will find it very profitable to continue to handle their goods on a basis which they have outlined. Our city will not have a regular Winchester store, but only an appointed agent, and we are all watching the progress with a great deal of interest.

Yours truly,

VAN DEREN HDWE. CO.,

Lexington, Ky.

J. F. Van Deren, Pres.

NEW ROMORT AIR STATION

The new Romort Air Station which has just been put on the market by the Romort Mfg. Co., of Oakford, Wisconsin, aims to fill the crying need and the long felt want of a fitting successor to the dirty, grimy and usually broken curbstone air hose and the bothersome old bucket.

It stands eight feet from the ground to the top of the electrically lighted globe. The base and the cylindrical standard are both of heavy metal construction and are of hollow design for the accommodation of the air compressor in the base and the air hose, water hose and the electrical conduit in the standard.

The new Romort Air Station may be used with an inside air compressor if desired or with an air compressor in the base of air station. It is built in the following styles, No. 11 without water attachment, No. 12 with water attachment, No. 13 with water attachment and electrical compressor in the base, No. 14 same as style No. 13 with pay attachment, for use where it is desired to make a charge for the air and water service.

H. N. White, formerly of Oskaloosa, Iowa, has purchased the hardware business of A. Nagel at Anaheim, California, and will continue the business.

ROBERTS DEARBORN COMPANY ENLARGES

Through our good and faithful friend S. I. Roberts, president of the Roberts Dearborn Hardware Co., Carlsbad, New Mexico, we are particularly glad to pass along to the trade the fact that that enterprising institution has doubled its capital stock to \$100,000.00 in order to purchase the Skarda Hardware Co., Clovis, New Mexico, the latter firm being taken over in January.

This company handles a full line of hardware, implements, plumbing, sporting goods, crockery, harness and saddles, and with the new store at Clovis, and the headquarters at Carlsbad, a branch is also maintained at Loving, New Mexico.

From present indications nothing can prevent a record year for the business of the company. The present officers are S. I. Roberts, president; F. L. Dearborn, vice president, and H. H. Dilley, secretary and treasurer; Roy Dickson, manager of the Loving store, and George O. Roberts, manager of the tractor departments.

GROWTH OF YAKIMA HARDWARE CO.

From the office of the Yakima Hardware Company, The Inland Empire, jobbers, at Yakima, Wash., comes the announcement that they have extended their organization, their territory to include the Walla Walla district of Southeastern Washington and Northeastern Oregon.

W. J. Botsford, formerly with the Marshall-Wells Hardware Co., and later with Schwabacher Hardware Co., in the Yakima territory, will have charge of this new field with headquarters at Walla Walla, where he is well known by the hardware fraternity.

M. D. Hathaway has been transferred to the Yakima City territory and will be missed by his many friends in the lower valley. J. M. Helm will cover part of the territory formerly taken care of by Mr. Hathaway and will extend west to include all towns to the summit of the Cascades on the N. P. and C., M. & St. P. Mr. Biehn, who has made the Diamond Tires famous in the Inland Empire, will have charge of tire accounts between the Cascades and Oregon and Idaho lines.

An addition to the warehouse will be built this spring to afford space for handling the increased business. The office there will be moved from present location. Later in the season the company expects to add a complete line of auto accessories.

PIONEER CUTLERY MERCHANT PASSES AWAY

In the passing away of Adolph Blaich last month the western trade saw the passing of one of the pioneer cutlery merchants in the West, if not in the United States. It was in 1880 that Adolph Blaich originally established himself in San Francisco as a cutlery merchant. For forty years he has engaged in that business exclusively.

At the time of his death he was 63 years of age. A native of Germany, Mr. Blaich had his training in the country of his birth and on coming to the United States he settled in San Francisco and in the cutlery business. Four years ago he retired from the management and the business was reorganized and incorporated by J. F. Blaich, R. W. Blaich and A. S. Blaich, the father's three sons, along with J. R. Jacques.

W. S. Thompson, of Thompson & Son, Harrington, Washington, has retired from the hardware business after thirteen years, having sold the business to W. H. Richardson and H. L. Monks, of Bonners Ferry, Idaho. The two new owners will move to Harrington and conduct the business along the same progressive lines that has characterized it in the past.

J. S. RAWLINS

C. J. DUNLAP

J. R. FERGUSON

REARRANGEMENT OF THE PERSONNEL OF DEPARTMENTS

The first of February saw a general rearrangement of the personnel at the top of the sales departments of three of the largest wholesale and jobbing houses of the far West, and the news is received with interest by the trade.

It is a strange coincidence in this case that each of these three men has been in the employ of the organization he left last month for nineteen years, all being very nearly equal before the bar of service. It is interesting and pleasant also that each of these three men leaves his former employer with the best of feeling, simply to take advantage of what seems a more attractive opportunity.

J. S. Rawlins, who for many years has been sales manager for Baker, Hamilton & Pacific Co., resigned to become vice-president and sales manager of Mangrum & Otter. During his long time of service Mr. Rawlins has worked up through the ranks with the old Pacific Hardware & Steel Co. on the road, and he is one of the most well known and well liked personalities in the far western trade.

Simultaneous with his admission into the firm Mangrum & Otter announce that their business will be conducted from now on on a wholesale only basis, with absolutely no retailing of household furnishings. Mr. Rawlins will have entire charge of the sales department.

C. J. Dunlap, whose term of service started with the old Miller, Sloss & Scott Co., about the time that Mr. Rawlins joined the organization, has also worked himself up through all the departments of the concern, and previous to his resignation was assistant sales manager. His magnetic personality and able instinct for salesmanship and managership has always made him a warm friend of the trade, and a proud factor in the organization. He announces his connection with the Protectograph Co., in its far Western office.

Paralleling Mr. Rawlins and Mr. Dunlap at the head of the sales departments is J. R. Ferguson, equally long in the employ of Dunham, Carrigan & Hayden. The history of Mr. Ferguson's connection with the Dunham, Carrigan & Hayden Co. is very similar to that of Mr. Rawlins and Mr. Dunlap of Baker, Hamilton & Pacific, and through a long and earnest service in the sales department, he has come to the top as sales

manager. He now assumes a position of great importance in the Western trade, and his qualifications for his new work justifies the wish and prediction of the trade that he will fill the office right up to the brim.

Instead of getting hot under the collar when people criticise your store and your business methods, stop and consider whether they may not be right.

NEWEST FREIGHT REQUIREMENT

It has been brought to our attention that one of the freak legislative measures now proposed to add to the railroad statutes is one requiring that the street address of the consignee appear on every freight shipment. Although this measure has not yet become a law, as we understand it, it should certainly be brought to the attention of the trade, so that everything possible may be done to stop such a wild bit of legislation.

"Rastus, how is it you have given up going to church?" asked Pastor Brown. "Well, suh," replied Rastus, "it's dis way. I likes to take an active part, an' I used to pass de collection basket, but dey's give de job to Brothah Green, who jest returned from Ovah Thai-ah." "In recognition of his heroic service, I suppose?" "No, sah, I reckon he got dat job in reco'nition o' his having lost one o' his hands."

"The Central Stamping Company of New York, are preparing their stocks of enameled roasters and enameled fruit kettles in anticipation of increased sales the coming spring. These goods are staple and well known to dealers throughout the entire country."

F. A. ERNST NEW NORTHWEST
PRESIDENT

Just because we reproduce a likeness of Mr. Ernst herewith in the grotesque form of a line drawing, is no sign at all that his election as president of the Pacific Northwest Hardware & Implement Dealers' Association is a thing to be taken lightly.

No fitter man in the northwest could have been found than Mr. Ernst for this important office. As the convention of the association will be held in Seattle next year it is highly appropriate that a Seattle president should be in the chair, and there is no member of the hardware merchants' fraternity of Seattle more worthy of the honor than Fred Ernst.

As president of the Ernst Hardware Co., Mr. Ernst has not only taken a lively interest in advancing and improving his own organization, but has devoted much of his time and energy to the development of the trade in general in the northwest. He is the sort of man that can do big things in a big way, and always has time for more.

We expect to see the affairs of the Northwest Association, also the matter of interest before the trade of the Northwest ably handled during the next year under Mr. Ernst's administration.

H. A. Steinke, who has long been identified with the hardware trade in the Inland Empire, has become distributor for the Health Heat Wrot Iron Pipeless Furnace and Heater, manufactured by the Donald B. Howard Heater Co., Des Moines, Iowa. Mr. Steinke will be pleased to correspond with any merchant in the northwest, who would consider a dealer proposition on the Health Heat Furnace.

L. E. Cook, formerly with Hochheimer & Co., Willows, Calif., has accepted a position with the Fabian-Grunauer Co., Tracy, Calif., as manager and buyer of their hardware and implement department.

ARTHUR ROTH DIES SUDDENLY

The California trade will be shocked to learn of the sudden death of Arthur Roth, junior member of the firm of H. Roth & Son. While his wife and son were seriously ill in a hospital, Mr. Roth suddenly became mortally sick of pneumonia and died.

Mr. Roth was born in Philadelphia twenty-eight years ago. The name of H. Roth & Son is more than familiar to the far western trade, and this enterprising organization has built up a wholesale and jobbing business in the last few years that promises a great growth. The loss of Arthur Roth will be a serious blow to the company as well as to his good friends in the trade.

In a spirit of optimism over the year just opened, and with marked satisfaction over the success of the year 1919, the stockholders of the Riverside Hardware Co. formally faced the tenth year of successful growth at its annual meeting recently. This firm is one of the successful members of the Hardware Merchants' Syndicate of California.

W. A. Bell, president of the Yakima Valley Hardware Co., at Yakima, Washington, has been appointed member of the Legislative Committee of the Business Girls' Club of that city in recognition of his status in the community, being perhaps the most popular employer in the Inland Empire.

The Tetzlaff Hardware Co. has been formed at Blythe, California, with a capitalization of \$75,000. A general hardware and general merchandise business will be carried on.

THE RIGHT SPIRIT

President McCutchan, of the Pacific Northwest Hardware and Implement Association, in his address well said: "The year just passed has been a history making period, surpassed by no such period in the history of the world. The industrial world is in such an upheaval that it trembles from foundation to spire and it is for the level-headed business man to put forth his best effort to hold down radicalism and unsafe business methods so that when the world is recovering from its intoxication caused by the unprecedented volume of business during our late war, business will be left on a foundation that will endure throughout all time.

Business Men and Christianity

"The business man of today is looked to more than ever as a foundation on which to build the spiritual as well as the business edifice of this great land of ours. While I am not affiliated with any church organization in particular, I fully realize the influence the business man has on Christianity, that influence which has raised the human race from the savage state to the high plane of civilization that we have reached today. So, as business men we should foster and support our churches as well as our schools and any other organization that is for the making of better citizenship, thus advertising our store as a business that is run by a man who is on the side of God and right. Thus and thus only can we hope to attain that degree of success to which we are entitled."

Stanwood Products

Accelerator Heel Plate furnishes a stable position for heel when operating the pedal. Prevents wearing a hole in the floor covering. May also be used as toe and heel guard on running board. Made of rubber vulcanized to a metal plate. Price 85c each, List.

Conformable Hand Pads add a pleasing appearance to car. Prevent finger marks and wear on finish of car. Made of leather in various grains. Price each, 90c to \$1.80, List.

Stanwood Adjustable Accelerator Foot Rest sells at sight. The user sees comfort and convenience in this little accessory. Relieves leg muscle tension, acts as a support. Prevents unintentional acceleration when driving over rough roads. Indented rubber roller. Steel uprights. Price each, \$1.60.

Add Distinction to Motor Cars

Accessory Merchants handling the best grade of automobile accessories will further profit by investigating the Stanwood line of products.

We manufacture Rubber Safety Step Plates, Rubber Heel Plates, Rubber Pedal Plates, Leather Hand Pads and Adjustable Accelerator Foot Rests of the highest type.

Each item carries a nice margin of profit and all are good sellers.

If you are not showing the Stanwood line of products we will be glad to send you our catalog for your consideration.

Stanwood Safety Step Plates are proving the most satisfactory of any step plates on the market. Made in various styles, rubber vulcanized to metal plates and also solid rubber segments inserted into metal rubber covered plates. Type B, \$2.65; C, \$1.60; Ford Type, \$1.60, List.

Thousands of merchants have realized the distinct advantages of selling Stanwood Products. They can freely recommend their high quality and guarantee of service.

STANWOOD EQUIPMENT COMPANY
307 Plymouth Court Chicago, Illinois

RAYDEX

The Raydex Shaftlight

The aristocrat of spotlights. Made entirely of silver, aluminum and brass. Equipped with the Raydex Glassless, Glareless Lens which throws a clear, powerful, penetrating beam. Eliminates all glare without loss of light. Graceful, rich and rattle-proof. Universal bracket fits any car.

The Raydex Glassless Lens

Made entirely of highly polished metal. Each lens contains more than 9000 reflectors which concentrate and intensify the beam. Effect is far-reaching, brilliant road illumination. No glare. No absorption or diffusion of light. Legal in every state.

RAYDEX MANUFACTURING CO.
BRACKENBRIDGE, PA.

Sales Department

Charles F. U. Kelly, Inc., 1834 Broadway, New York, N. Y.

DAVDEV RAYDEX

The Raydex Reliner For Ford Transmissions

Makes easy work of an otherwise mean job. Just take off handplate to transmission case, pull out pedal and slip in Raydex Reliner. That's all there is to it once a Ford is equipped with Raydex Reliners for Ford transmissions. They eliminate necessity of tearing down entire transmission in order to change fabric.

Raydex Reliners are merely slidable bands of tough, half-hardened cold-rolled steel to which lining is securely riveted. They slip around inside Ford transmission band quickly and easily. None of original Ford equipment is replaced or disturbed.

Charles F. U. Kelly, Inc., 1834 Broadway, New York, N. Y.

CALIFORNIA NOW LEADS IN AUTOMOBILE OWNERSHIP

According to recent statistics it is stated that California now leads all states in the ownership of motor cars in proportion to population, with one car to each 5.6 persons in the state.

It is stated that there are now 7,718,020 automobiles in operation.

Last year Iowa and Nebraska were tied for first place in the percentage of cars to population, with one car to each seven persons. Then California stood seventh in the list of states, with one auto to each eleven persons.

So far as groups of states are concerned, the West defeats the East for the first time, according to the report, with California, Washington and Oregon showing a percentage of 1919 gains of exactly 35.4 per cent over 1918. California in this group was the leader, with Washington second and Oregon third.

Next in the gain or auto registrations in the South—the southern states of America—which showed a 33 per cent gain last year over the year previous. The so-called mountain states maintained the national average of a 28 per cent gain, while the eastern manufacturing states fell to a 23 per cent gain, and the Middle West agricultural states made the poorest showing, with only a 22 per cent increase in registrations over 1918.

An explanation of this variation in percentage increase is made by officials in pointing out the proportion of cars owned in each "state group" to its population. It is indicated in this explanation that the "saturation point," as far as automobiles are concerned, has nearly been reached in the Middle West section, where Iowa has one auto registered to each 6.1 persons; Nebraska, one car to each 6.2 persons; Indiana, one car to each ten persons; South Dakota, one car to each 6.3 of population, and Minnesota, one car to each 8.3 persons. Therefore, it is shown that there is not the opportunity offered in the Middle West for the percentage gains possible on the Pacific Coast and in the South.

A fool has seldom been answered "according to his folly" with more appropriateness than was the local preacher who boasted at a dinner-table that the Lord had opened his mouth to preach without sending him to college first. "Indeed," replied a curate who was present, "how very interesting. A similar event happened in Balaam's time."

QUITE A HELP.

In enclosing our subscription for the "Hardware World," we want to tell you we appreciate it very much, and it is quite a help to us.

JAEHNIG ELECTRIC CO.

STEPHENS BILL COMING UP

The so-called Stephens Bill, which it is claimed will prevent the misuse of well known trade-marked articles as advertising bait to deceive the public, would be actively pushed by its friends as soon as Congress shall finally dispose of the railroad and water power legislation now in their last stages.

For several years representatives of wholesale and retail organizations throughout the country, as well as manufacturers, have been coming to Washington and urging the passage of the Stephens Bill. It is said that more than eight hundred national and state associations of merchants are solidly behind the measure and that only the intervention of the war prevented its consideration two years ago.

The Federal Trade Commission, after exhaustive hearings and prolonged investigation, has sent two special reports to Congress recommending legislation and formally approving the Stephens Bill. This has greatly encouraged its friends in and out of Congress in confidence of early action.

The decision to resume active work for the enactment of the bill was reached after a series of conferences and the American Fair Trade League, which has been directing the movement, today issued a statement, through its executive committee, composed of prominent business men and economists, setting forth the need for legislative relief and calling for active work. The Committee statement reads, in part, as follows:

"It is, moreover, our opinion that Court decisions like the Colgate and Beech-Nut cases, while highly desirable to secure, cannot finally dispose of the evil, as there are many forms of business not able to readily avail themselves of the principles there laid down. There can be no complete, permanent settlement until the principles involved in the Colgate and Beech-Nut cases have been fully recognized and supplemented by appropriate legislation.

"We, therefore, urge that our members relax no efforts to secure the passage of the Stephens-Ashurst bill, which has the endorsement of the Federal Trade Commission.

ONE AND THE SAME

Student, farmer, author, politician and reformer, Sir Horace Plunkett is one of the most versatile of Ireland's sons.

He is very witty also. On one occasion he delivered a lecture in Dublin on the best way to improve the conditions among the poor. At that time he was not exactly a finished speaker, and then, as now, a bachelor.

The day following his address, he received from a lady a note, which read: "What you need are two things—first, a wife; second, lessons in elocution."

To this he replied: "These are only one."

The Brake Lining that's Sure in Sales and Service

RUSCO Brake Lining and Clutch Facings

give satisfaction alike to the dealers who sell them and the motorists who use them.

Rusco Brake Lining is woven of the finest white asbestos, reinforced with brass wire and treated with Rusco Brake Lining Compound.

NORTH PACIFIC AUTO ACCESSORY ASSOCIATION

An enthusiastic meeting was held at Spokane, December 6, which was the best meeting that the North Pacific Coast has ever had. The local association meets at Spokane once each week. The following institutions were represented at the convention held in Spokane in December:

Bertram Motor Supply Company, Butte, Mont.; Holley-Mason Company, Spokane, Wash.; Marshall-Wells Hardware Company, Spokane, Wash.; Child, Day & Churchill, Spokane, Wash.; P. J. Cronin Co., Portland, Ore.; Water house & Lester Co., Billings, Mont.; Archer & Wiggins, Portland, Ore.; Northwestern Auto Supply Co., Billings, Mont.; Ballou & Wright, Portland, Ore.; Ballou & Wright, Seattle, Wash.; Motor Mercantile Co., Salt Lake City, Utah; Marshall-Wells Hardware Company, Portland, Ore.; Intermountain Electric Co., Salt Lake City, Utah; Capital Electric Company, Salt Lake City, Utah; Chanslor & Lyon, Spokane, Wash.; Reynolds & Reynolds, Tacoma, Wash.

Various institutions were likewise in attendance and the next meeting of the association will be held just prior to the National convention, to be held at Del Monte in June.

A STETSON HAT PROVED AN EYE-OPENER

We handle a lot of builders' supplies—probably have half the business in this town in building materials (outside of lumber) and masons' supplies, writes an Ohio hardware dealer. I have always done the buying myself and a good share of the selling and I've learned that the dealer who is a good salesman and can get others to sell, has won half the battle.

The other half is to buy right.

Well, a man with a derby hat and a satchel came into the store one day to sell me a stock of wall finish—we'll call it Arathusa, though of course that wasn't its name.

A Bad Habit

I used to have a habit of ducking salesmen—just a habit. Had an idea they were time-wasters and spouters of super-heated air. I made this man wait a long time—puttered around the store making believe I was busy. Then I let him come over to the desk and he started to tell me all about how good his kalsomine was. I had a stock of a competing brand—we'll call it Blue Streak Brand. Hadn't sold much of it, but I was stocked up on it, so I naturally stuck up for it. Got into an argument with this salesman about it.

A Good Thing to Know

He said Arathusa was much better and we discussed it all around Robin Hood's barn and finally clinched on a statement he made that

the Blue Streak Brand I had was full of animal glue and would smell to high heaven if mixed up and let stand over night. Said his Arathusa had no animal glue in it—was based on natural gypsum rock—and would not drive the family out of the house even if it was mixed and allowed to stand.

Maybe that was a foolish point to argue over, but it was a point.

Said the salesman, "I'll tell you what we'll do; we'll mix up some of mine and some of yours and let them stand over night and I'll bet you a new hat that yours will smell as though it had died and the Arathusa will be as sweet as a baby's breath."

"Make it a Stetson," said I, and we mixed up two lots in separate pails and painted the proper name on each pail and the salesman watched me lock 'em up in the private office when I closed the store.

"Now, I'll bet you a cigar you lose your bet," he said.

"Don't want to rob you," I told him, and we left.

The next morning the salesman beat me down town. He was waiting for me. We unlocked the little room and opened the door, and it sure did seem that a ferret had slept in there.

"That's your stuff you smell," said the salesman.

"It's yours," I claimed.

Well, I bought the salesman a Stetson hat and I bought a stock of his stuff and I shipped mine back to the Blue Streak people, because their stuff did sure appear not to be feeling at all well that morning. I afterwards found that in damp weather that brand always acted that way when being applied and the Arathusa doesn't. I've sold lots of Arathusa since—I've sold a lot of it by telling this story.

And the moral is, buy right.

Learn From the Salesman

And the way to buy right is to get every scrap of information you can from traveling salesmen. I listen to 'em now. I encourage them to talk. Most of them are keen-witted chaps. They knock around a lot and pick up a store of valuable information.

I don't believe all they tell me—there are a lot of deceivers and bores and braggarts among them, but the dealer who avoids salesmen as a rule, is missing wisdom. A dealer is often a one-town man. He doesn't get out much. The traveling salesman, especially of the good houses who advertise their goods widely and have a reputation to sustain, bring right to the dealer's door a mass of buying and selling helps that the dealer can use.

It cost me seven dollars to learn that. It has been worth it, many times over.

Reports from Corning, California, tell of the successful enterprise of John T. Morgan in his implement store there.

To Wholesale Tire Distributors

We want the one best **Wholesale Tire Distributor** in each territory not now occupied, to write for our exclusive proposition!

To Retail Tire Dealers

Our new plan of having a factory branch—or an exclusive wholesale distributor in every important trade center, enables you to get **STERLING TIRES** when you want them—and at our best factory price.

Why are **STERLING TIRES** so dependable?

Twelve years of successful experience!

Highest quality material—and plenty of it!

A sincere desire to make the best tire possible!

Long experience alone is not a sufficient guarantee that a tire will be made as good as it is possible to make it. Highest quality of material and plenty of it is necessary to make a thoroughly dependable tire, but even this added to long experience, will not insure long life in a tire—and satisfaction to the user.

Experience counts for much, and good materials are essential; but the one thing that crystalizes both these factors and develops them into a good tire, is the earnest desire of the manufacturer—and each individual workman, to put "**Sterling Conscience**," and "**Sterling Character**" and "**Sterling Dependability**" into every **STERLING TIRE**!

Vacuum Tread, Non-Skid Cords and Fabrics

STERLING CORDS have never been excelled by any cord tire made—and seldom equalled.

STERLING FABRICS are like old friends; they are dependable.

STERLING SEAMLESS RED TUBES are made of pure gum. A section will float in water. Only the highest quality of pure rubber will float.

Sterling Tires

STERLING TIRE CORPORATION

NON BURN

Why you can get Non-Burn when you need it

As a progressive dealer, you realize the important relation of rapid turnover to profit—and the no less important relation of prompt stock renewals to turnover. In handling Johns-Manville Non-Burn Asbestos Brake Lining, you are assured of a steady supply from a reliable source because Johns-Manville, with its own mines and mills, supplies your jobber, without being dependent on the open Asbestos market for raw materials.

Keep this fact in mind when you investigate the relative advantages of carrying different brake linings:—You can get Non-Burn when you need it.

**Johns-Manville
Automobile Tape**

Here's a tape so good that we guarantee it. Johns-Manville Tape will make satisfied customers for you.

**Johns-Manville "Noark"
Automobile Lighting
Fuses**

You can back these fuses as absolute safeguards for your customers' batteries. The name "Noark" means split-second accuracy.

Every Other Car a Ford— Every New Ford A Prospect

LOOK at all the new Fords that go by every day. There they are, all equipped at the factory with electric lights, starters and instrument boards—but the owners have to buy their speedometers after they get their cars.

And you are the logical man to handle this speedometer business—because you know automobiles—and these Ford owners know you do. That's why your recommendation goes a long way with them.

Talk to every man in your vicinity who owns a new Ford. Tell these men what a Johns-Manville Speedometer will mean to them in economy of operation, as well as in the mere satisfaction of curiosity about "how fast" or "how far".

Keep the new Johns-Manville Speedometer for the new Fords right on the counter, where you can show its unique combination of accuracy, simplicity and beauty.

You can attach it easily and quickly on the instrument board that is supplied with the new model Fords. It fits exactly.

There's a fine profit in the sale of this useful specialty that you certainly should not miss. Get in touch with the nearest Johns-Manville Branch and ask them to explain what the Johns-Manville Speedometer will mean for you in dollars and cents.

MANVILLE

Equipment

*Johns-Manville Hub
Odometer*

There is an increasing demand for an accurate but inexpensive mileage recorder that can be attached to business cars and trucks. This instrument will enable you to meet the demand—at an excellent profit.

*Johns-Manville Auto-
motive Mogul Packing*

For water pumps and similar places, where a small twisted or braided packing is required, Mogul Packing makes a tight job. Besides stopping the leaks, it is a natural lubricant. Keep Mogul Packing on hand, there are lots of uses for it.

*Johns-Manville Clutch
Facing*

When you install clutch facings, you can reinforce your own skill with the quality, wear-resistance and gripping power that are built into Johns-Manville Clutch Facing.

DON'T BEGRUDGE A SHARE TO YOUR COMPETITOR

"To men of greed, however great their store,
'Enough' is always 'Just a little more'."

There is an old fable which tells of a dog which was naturally a very greedy animal. He started for home one day with a huge piece of meat in his mouth. On the way it was necessary for him to cross a little stream of water which was bridged by a plank very near to the surface. When the dog reached mid-stream, he saw reflected beneath him another dog with a dark piece of "something" in his mouth.

For a moment the animal stood and thought. He had all he could well carry, but he couldn't quite bear to see the other dog have something without his trying to get it. So he made a grab for the dark object—presumably food in the mouth of the dog in the water, when, alas and alack! the big piece of beef which he was carrying fell from his own jaws and floated away into the stream below.

The moral drawn from this fable is simple and direct: "Much wants more and losses all."

There are many men in the business world today who are greedy in just this same manner. They are not satisfied with moderate profits. They want to get just as much money as they possibly can out of every single sale. As a result, they win the reputation for being high-priced and customers fight shy of them, go elsewhere first, and only patronize them as a last resort. The fewer customers they have, the more money they are inclined to charge, for, of course, the pressure of business expenses becomes greater as trade falls off.

Then there are those who try to use undue pressure to bring their business transactions to a successful close. Sometimes these people over-reach themselves.

Not long since an automobile salesman demonstrated a high-priced car to a certain farmer. The farmer was clad in working clothes and didn't have very much to say. Nevertheless he owned much rich land and had a fat bank account. The smart salesman knew that he was well able to afford the car that he was demonstrating and so, in order to induce the prospect to make up his mind, he said:

"Mr. Strawstack, the price on this car is \$3000. I'll give you until noon on Monday to make up your mind."

Mr. Strawstack looked at him shrewdly.

"Young man," he returned, "you needn't give me anything. I'll make up my mind right now. I don't want any dealings with you whatever, and so it is useless for you to spend any more time showing me that machine."

With these words, Mr. Strawstack went into the house, and the salesman rolled slowly down the road, a sadder and, we hope, a wiser man.

Some people over-reach by trying to do too much. They are not satisfied to let the other fellow have a show, too, but they want to "cop" everything in sight.

There was the case of the dealer who was sure he could supply all the materials wanted by everybody in his territory. And so he continually knocked and threw out insinuations against the goods and service of his competitors. For a while he did a rushing business, but he had more patronage than he had cash to swing his business with, and in trying to serve too many, he gave dissatisfaction to everybody.

Inside of two years, he found himself thrown up on the bank of the stream, carried there by the very eddies which his own flopping about had created. It didn't give him pleasure or satisfaction to see those in the same line sail successfully past.

Greed is a senseless over-reaching. It is an unwillingness to have the other man have his share; it is a desire to get as much as possible and to give as little in return for it. Be satisfied to let well enough alone and to make further progress only by real merit and on the stable foundation of reliability and confidence. A greedy man is never respected and he is always at outs with himself sooner or later.

GOODELL-PRATT VALVE SPRING LIFTER

A valve spring lifter which may be used on any make of car has been added to the list of tools made by Goodell-Pratt Company, Greenfield, Mass. The new tool is of drop forged steel, light in construction, and small enough to be used handily in tight places. The device is simple, the jaws move on hardened rollers, and the screw turns on ball bearings.

A turn of the screw forces the bar towards the jaws. As the bar is moved forward by the screw, the distance between the jaws is widened. While in a closed position, the lifter is inserted beneath the valve spring. The lower jaw rests on the engine frame, while the upper jaw lifts the base of the spring.

The angle of the jaws, and the simplicity of the lifter as a whole, allows sufficient room to work on the valve stems and remove the pins without difficulty. The larger circular opening in the upper jaw is to allow this jaw to extend above the small connecting parts on and about the valve stem, allowing them to be easily removed.

With its characteristic enterprise and thoroughness the Black & Decker Mfg. Co. was liberally represented at the New York, Chicago and Minneapolis Automobile shows. A large force of salesmen and officials of the company were present at the exhibit in every case, demonstrating the Portable Electric Drills and Electric Valve Grinders.

MARCH FLYERS

It is always discouraging to slip back, not particularly satisfactory just to hold our own, and thoroughly inspiring to make a substantial stride in advance.

Read that sentence over again carefully to be sure that your eyes have not taken it in, without telephoning its message to the brain.

The next thing I want you to do is to look up your March records of last year and for five or six years back, taking in particularly the pre-war period. Of course, you do not want to lose ground, and you will not be satisfied with merely marking time. What you will hope to do will be to make such marked business gain that you will get a flying start for the whole year.

There is nothing like having a definite goal, to avoid drifting and to make some farther point ahead. That is why it is so important to know just what you have to reach and surpass. Having made sure of this, the next step will be to lay down plans whereby the end desired may be achieved, for happy results do not come about by mere chance or happen-so. They are the result of well laid foundations and carefully planned superstructures.

To begin with you can only remain in business and make progress by offering the public something which it wants and which will prove satisfactory in the using.

It doesn't make any difference whether this is goods, service, or goods and service combined. So it will be necessary for us to take a careful inventory of what we are offering the public and not to delude ourselves by thinking it is "good enough" or probably as satisfactory as our competitors are offering.

Do You Really Know What Your Competitors Are Doing?

We must not take anything for granted. We must know. Possibly we will get some jolts if we compare what we are selling and the way we are selling it, with what our competitors are selling, and the way they are selling the same lines. Remember people are going to go where they will get the most for their money.

The case comes to mind of a retailer who was on the point of bankruptcy, and yet it never dawned upon him that he was old-fashioned or had gotten into ruts, and was not measuring up to what the public had a right to expect.

After the Christmas season particularly there are likely to be special sales or inducements of various kinds, and these together with inventory taking, are likely to give retail establishments a disordered appearance, if great care is not taken.

So see to it, that your business is attractive to the eye and that every employe realizes the necessity of cheerful courtesy, interested attention and skillful methods of salesmanship.

This is the period of the year when workers are so apt to relax unless they are encouraged and inspired by special means to keep on their tip toes. Don't neglect to do your part or to encourage others to do theirs.

The next step in larger business for March is adequate publicity. As advertising rates go higher it becomes increasingly important to study how to make advertising count, that every expensive word which is paid for will pull for more business, and that carefully prepared advertising may bring results.

The higher the tariff the more good you should plan to get out of it, so begin the preparation of your advertising early, in order to have time enough. Be truthful, and try to appreciate just how your publicity will affect the public and also how you are prepared to make good on your promises. Without plenty of advertising you cannot increase your patronage, and without patronage you cannot increase your business.

Are You Satisfied to Stop Growing?

The third step has to do with expansion. Growth is an essential of every living thing. When a tree stops growing it begins to die. Are you satisfied to stop growing—to pause right where you are without expanding in any direction?

One retailer who determined to increase his business last March looked around to see how he could do it. He found three ways.

The first was to clear up old and broken lines and to turn them into cash.

The second was to stock with more attractive goods and to advertise them.

And the third was to add two sturdy lines and to develop a special department in connection with them. He was successful in doing twice the amount of business of any previous March. What about your own opportunities?

Turn Your Advantages Into Cash

Every man in business has some special advantages which he can turn into cash advantage if he is alert. Lack of alertness is sometimes plain laziness. Then when you have made up your mind to make the most of your advantages, make out a list of your disadvantages, and take them one by one and inspect them on every side. You will soon discover that you can cash in on every one of them if you handle the situation in the right way. Many a man has gotten rich out of his disadvantages.

The Midland Hardware Co. has taken over the interests of the Ryniker-Winter Hardware Co., at Billings, Montana. The new firm moved to a new location in an especially constructed building last month.

The Pioneer Mercantile Co., of Bakersfield, have just opened a branch at Taft, California, with a full line of hardware, paints, oils, varnishes, auto supplies, etc.

Over 1,500,000
satisfied users of

ROSE TIRE PUMPS

The reason is the unsurpassed
quality and correctness
of design

- (1) Seamless steel barrel, polished inside, baked enamel outside.
- (2) Patent valve, admitting the air thru the center of the rod and not around the leather. The leather valve is not disturbed and the compression starts the instant the downward pressure on the handle takes place.
- (3) New steel base permitting the hose to run alongside the barrel.
- (4) Steel stirrup folds alongside barrel.
- (5) Steel hose band, no bolt, permitting of the connection being made in close places.
- (6) 5-ply hose with pure para-rubber inner wall.
- (7) Locking nut for handle. Loosen nut, remove handle by spinning backward.
- (8) Your protection. The insignia of Tire Pump perfection.

A DISPLAY THAT MADE SALES

This attractive sales window of the Boeske-Dawe Company proved to be a splendid trade bringer. Although high, the window was used some time ago, even now people occasionally refer to it, mentioning some of the goods that were displayed.

One particular instance is mentioned by Mr. Kittler, the window trimmer. A family were touring the West and happened to be in Santa Barbara at the time this display was in the window. Their home was 1500 miles distant, but only recently a lady returned to the store, stating she did not remember the name of the firm, but did recall the location on the street, and as she was very fond of outdoor life, purchased some of the goods which had been displayed

months previously, as well as bought quite a number of other articles from the regular stock for household use.

Twenty-four feet of scenery were used as a background and the water painted in the scenery was connected with an actual stream of running water through the use of two tanks eight feet high and thirty-six inches wide. Centrifugal pumps operated by an electric motor used the water over and over again. Actual dirt, ferns and pebbles were used in the fore part of the window over which the water trickled and trout "negotiated" the riffles over the pebbles. It was no unusual thing for the street to be blocked with people six or eight feet deep to view the window. The fishing tackle sales of the Boeske-Dawe Company was more than double that of the year previous.

POOR Mufflers consume a lot of power and make a lot of noise. If you feel "Old Man Back Pressure" tugging at your car and you prefer a quieter running Ford, it's time you made a change.

It is estimated that every Ford car bursts on an average, one muffler a year by backfiring. It's impossible to stop the backfiring but the Apco Muffler is made in one piece with a Relief Valve and back-firing means nothing in its young life.

Muffler

It is scientifically designed and does not attain its wonderful silence at the expense of back pressure, so common to many mufflers, and there are no small parts to work loose and rattle. The Testing and Safety Valve is a big feature and the double springs keep it shut tight when not in use. A five minute job to install and a source of satisfaction for the life of the car.

\$5.00

We almost forgot to mention that a Ford Car equipped with the Apco Muffler sounds like a Stutz, with the Testing Valve open, especially on a hill.

APCO MANUFACTURING CO.
Providence, U. S. A.

Please send me an Apco Muffler through the nearest jobber with the understanding that I can return it and get full credit within thirty days if it is not all you claim for it.

(If you are a dealer give us your jobbers name, if an owner, send us five dollars with your order—you can have it back if you want it.)

Name.....
Address.....
Jobbers Name.....
Closed.....for.....

ARE you sure she's hitting on all four? The Testing Valve on the Apco Muffler will tell you before you leave the garage and it will also help you locate the missing cylinder. Get a good start—let the other fellow guess.

ELECTRICAL SALES LARGEST PER CAPITA IN THE WEST

It is not often that a New York publication can be brought to recognize that "lit'l ole New Yawk" does not take precedence over anything west of it.

But here is an instance when the New York Tribune has awakened to the fact that in the matter of consumption of electricity, one far-Western state uses thirty times as much per capita as a New Yorker does.

And what is true of California is likewise true in proportion of almost any of the Pacific Coast and intermountain sections.

Here it is, too, that the hardware merchants are alive to the sale of electrical merchandise, and practically every hardware merchant handles electrical goods to a greater or less extent, and 1920 will see an increasing number.

But here is the confession referred to:

Our Backwoods Town

A highly civilized spot we self-satisfied New Yorkers take our town to be—the last word in comfort and convenience and luxury. Think of the poor yaps by country cross-roads who have to get their water from a pump and fuss with a kerosene lamp! What backward folk! How can they exist?

Nevertheless, comfort and convenience are wholly relative terms, it behooves us to remember. And New Yorkers should not be quite as proud and pleased as they are. They lead a very comfortable life in some respects; in others they are far behind.

Take any of the Western states, like California, for example, where electricity is not a semi-luxury as in New York, but an accepted part of everybody's home-living and home-making.

West Uses 30 Times as Much Electricity as East

The annual consumption of electricity in New York per capita is \$1.14. The consumption in California was \$30 three years ago, and is now estimated to be over \$40.

That expresses mathematically a difference in comfort. The California home uses thirty times as much electricity as the New York home; and, in one important respect, is about thirty times as convenient.

Hardware Merchants Should Not Neglect This

All know the convenience of electric lighting—you press a button and the light is on. There is no filling of a lamp, no lighting of a match, no dirt, no smell. We should feel that we were going back a hundred years if forced to use candles.

Yet the coal stove belongs with the candle period, whether for heating or for cooking—so a pitying Westerner will tell you. Lighting has run ahead of general heating; but the electric pad—shades of the old warming pan!—and the room heater are already practical and marvelously convenient appliances.

And the electric toaster, the electric vacuum cleaner, the electric iron and the electric motor for the sewing machine—who that has ever used one would go back to old methods without a feeling akin to that of abandoning, let us say, an automobile for a buggy, or giving up the central furnace for a batch of stoves?

A Growing Demand

There is an especial and growing need now for the electric household appliance—a need that makes its service an essential comfort, not a mere luxury or convenience. As the house-worker tends to disappear, the electric servant steps forward to take her place. Hands are not eliminated, but they are helped and kept clean, and their time of service is reduced to a minimum.

How can New Yorkers hope to progress and ultimately come abreast of the West in comfort and convenience? A cheap rate from the power companies is one answer. Another is the construction of houses and apartments with the proper wiring for electric service.

New York City is only 10 per cent wired, it is estimated. Nor is new construction wired as completely as it should be. Here is a point for the intelligent landlord and the discerning tenant—at least for the latter—as soon as tenants are again permitted to discern or do anything except pay more and more rent.

The increased cost is small. In new construction complete wiring with base plugs, wherever full electric service demands them, adds only one-fiftieth of one per cent to the total construction cost. In normal times such installation is bound to be demanded and bound to pay. The builders with foresight have already taken notice. If there are enough of them another decade may see the New York home as comfortable and convenient as the California! And think of the public and private gains of home-saving, of preserving an institution concerning whose future there is anxiety!

GARAGE TYPE TOOL CHESTS

A full line of tool chests and cases made by the Union Tool Chest Co., at Rochester, New York, are specially designed for automobile and truck mechanics and owners. A customer of yours who knows a good tool, takes pride in keeping up his collection, will also realize the value of a chest, which is constructed especially for the use and preservation of good tools. He will realize that it is economy to house these tools in a standard and well built chest.

A special garage chest of only 20 inches will contain all the tools necessary for the repair and maintenance of machines. It is conveniently arranged with two small top drawers, for the smaller instruments, and larger drawers below for the larger tools. The company also makes 16 and 19-inch chests in both oak and leather for general mechanics' tools. Besides its Rochester factory it has branch offices in New York, San Francisco and Chicago. They guarantee to return every cent of money paid for a chest that does not meet with entire approval in every respect.

No. 11

PEERLESS RADIATOR

Fits 1917 and later model
Ford cars. Also adaptable to
Ford one-ton Truck.

This GUARANTEED RADIATOR is equipped
with the indestructible Peerless Honeycomb Core,
that is so efficient for the cooling of Ford engines.

PRACTICALLY FREEZE AND BOIL-PROOF

All parts coming in contact with water are of
durable brass. Radiator shell finished with two
heavy coats of black Japan; also nickel-finish.
Brass core in gray.

Ask your jobber about PEERLESS PROD-
UCTS FOR FORD CARS: Radiators, hoods, radi-
ator and hood combinations, fenders, tool boxes—
or write Dept. 14 for complete catalogue.

THE LAW ON PROFITEERING, ETC.

(Copyright by Elton J. Buckley.)

It has occurred to me that perhaps the readers of these articles, which include business men in every known line, would be interested in knowing what the law is on the subjects which are now being so loudly discussed all over the United States, viz.: hoarding, profiteering and the high cost of living generally. The newspapers are publishing reams of wild talk from themselves and everybody else, most of which is based on a total misconception of the law, and what can be done along those lines under the law. I have not seen any real presentation of the law anywhere.

First consider the Lever Act, which one sees mentioned frequently. The Lever Act was passed primarily to conserve food products and other war necessities, and covers only foods, feeds, fuel oil, natural gas, fertilizer and materials for same, tools, equipment and equipment to produce them. The great mass of products outside of those named were not subject to the Lever Act at all.

The Lever Act was a war act, which will die as soon as the treaty of peace is signed. It prohibits destroying necessities to enhance the price or restrict the supply, allowing deterioration for the same purpose, prohibits hoarding, monopolizing, engaging in unfair practices, conspiring to limit production, transportation, distribution, or to raise prices.

Under the Lever Act, or under the common law, the hoarding of food products to enhance the price is unlawful. I don't mean that John Smith, owner of fifty tubs of lard, couldn't hoard it—he could do more; he could destroy it. There is no hoarding unless it materially affects the general situation. Putting food in cold storage for the coming scarce season is not hoarding.

There is nothing in the Lever Act which gives anybody any right even in war time to fix the profit a merchant shall make on the products covered by it, and the Government officials admit that now, though they did not at first. During the war they controlled prices and profits by licensing large jobbers who sold retailers (they could not license the retailers themselves unless they did over \$100,000 yearly). Then if a small unlicensed retailer sold at prices which the Food Administration thought excessive, they got after him through the licensed jobber who sold him. The jobber was told to cut him off or lose his license. I have always believed this to be illegal, but the question was never raised by any of its victims.

I have written the above to show that even under the Lever Act there is no authority which punishes hoarding even of the war necessities covered by it, except under sharp restrictions, and there is no authority at all which prevents "profiteering" or which enables anybody to

fix your profit or mine and compel us to sell at the percentage fixed.

Outside of the products covered by the Lever Act the law is even more impotent, for there is nothing on the subject at all. If a shoe dealer wants to buy shoes at \$6 and sell them at \$26, there is nothing on the statute books to stop him. Otherwise, of course, if he has a monopoly in shoes, or if he combines with his competitors not to sell below \$26.

Nor could there be, in my judgment, any act passed under our constitution, which would allow such profit fixing. The law has always taken the position that the price a man put on something which he owns is his own business, and that if he makes it too high his competitors will cut below it and consumers will not buy of him, thus bringing him down again.

Hundreds of newspapers have been predicting that the Government would get after dealers or manufacturers who were charging excessive prices on shoes, clothing and other things outside of food. It will never be done, I predict, unless the Government can find an unlawful combination somewhere. If I am a dealer in men's clothes I have a right to ask what I please for my stock, and so long as no misrepresentations are used, and the public is free to take it or leave it, nothing can be done.

There is very little law having to do with the question of profit. No court has ever said what was a fair profit for selling hardware, or butter, or women's waists. There has never been a law authorizing a court to do so, and for reasons given above, I do not believe there could be.

And as a practical, rather than a legal question, how could there be? Take A, a cash dealer running on very low overhead, with an expense of 7 per cent. Take B, running on 13 per cent, and C, a fancy dealer, giving his customers all sorts of conveniences, running on 30 per cent. How could a law fix a profit for these three dealers, and for a multitude of others whose conditions would differ about as widely? It could not be done. To be sure, the law might base its idea of profit on what C would have to get, but that would be nuts for A and B, who could with that standard exploit themselves as low-profit men in a way highly embarrassing to C. No, I am clear that in the case of individual dealers, not participating in any unlawful combination or monopoly, their conscience is the only possible restriction upon their profits.

The law has always looked differently on goods which are necessities of life than on articles like diamonds or finery, for obvious reasons. But even with necessities, and even in war time, the law has never, except very indirectly, tried to fix dealers' profits or even to influence them, except by moral suasion. Members of labor unions can combine to fix their prices, but dealers cannot. If they all, without

combination, take advantage of an obvious opportunity to raise prices, they are immune from anything like legal punishment, as far as I can see.

I feel like saying that everything said above applies equally well to rent profiteering, as it is called. All over the country threats have gone up as to what was going to be done to the man who raised rents. But have you seen even one case brought? No, and you will not. A man's real estate is his own and he can put whatever price on its use that he likes. The fact that it may be the only vacant house in town is a mere detail. Nobody can fix his price for him under either present or future law.

HARDWARE POET

The following verses were composed by George Young, manager of the paint department for the Marshall-Wells Hardware Co., in honor of the recent banquet liberally tendered by the jobbers of Portland, Oregon, to the delegates at the recent convention of the Oregon Retail Hardware Association:

1910

Sing a song of banquets,
Dealers full of rye.
Four and twenty jobbers soaked to the eye;
When the meal was over
The fellows all were sore,
Cause they got but twenty drinks
Instead of forty-four.

1920

Sing a song of banquets,
The nation's all gone dry.
Everywhere you go, you hear the dealers sigh;
But the thing they sigh for
Is not what you surmise—
What they want above all else
Is just plain merchandise.

—By George H. Young.

HOLLEY-MASON FEASTS DELEGATES

Among the features of the recent convention of the Pacific Northwest Hardware Association at Spokane, was the entertainment furnished to the visiting merchants by the Holley Mason Hardware Co.

One of the mornings of the convention when no regular session was scheduled, all visiting merchants were invited to the quarters of the Holley Mason Hardware Co. An open reception was held, the company salesmen taking the dealers from their respective territories through the plant. Refreshments were served and dancing relieved the usual tone of the big warehouse and display room.

The Spokane Stove & Furnace Repair Works have announced to the trade that they have added a foundry to their establishment, and their plant is now equipped with every modern device and is under the supervision of an experienced foreman.

Besides stove accessories they can furnish general castings at a lower price and with increased service efficiency.

KEEPING YOUR EARS TO THE GROUND

This adage is as much for the hardware man as for the farmer. No Rip Van Winkle sleep for the hardware dealer! He must have his ears to the ground! He must be responsive to the hardware needs and changing desires of the public! He must feel the public pulse often! He must cultivate that mysterious sixth sense, the business sense that anticipates the desires and tastes of patrons; he must be a business-anticipator, a desire road-smoother.

Avoid two extremes; there is the extreme of the man whom the salesman readily loads up with an overstock of everything new under the sun—the very word, "new," is a lure to him.

Sometimes the sheriff must of necessity take a hand in the unloading. Then there is the fellow who shies out from everything new as a skittish colt shies out from a newspaper. But this is anticipating the sun; it refers rather to business weather prophets—may they prophesy truly and reap abundantly.

When the business sun does shine resplendently upon one article, give it time, thought and display. I am a trout angler; worms are anathema to me when the trout call for salmon eggs, and nothing else; salmon eggs are forgotten when they seem to have a natural craving for artificial flies. I cater to the appetite and tastes of the trout. Same rule applies to business!

Close a sale while the patron is interested. He may say, "Well, I think I will wait a day or two before I decide." Forty things may happen—yes, forty-two things—in the next day or two to prevent the consummation of that sale.

If you can conscientiously press the sale, if you really believe it would be to his interest to make the purchase, marshal all your tact, courtesy and knowledge—both of human nature and of goods—to close the deal.

On the other hand never urge a man to purchase what he does not need and should not buy—such purchases are often business boomerangs. Better lose a sale than to lose a business friend and future patron.

The transient in your store today may never return. Has he a need today? Be a discoverer—discover, and supply his need. Make your hay, now, ere he flit elsewhere, for he may be some business bird of passage, who flits here and there, with no business abiding place. After all, this is a sunshiny day. Let us make good, wholesome, sweet business hay today.

When the addition to the O. S. Stapley Hardware Co. building at Mesa, Arizona, is completed, this firm will have one of the largest and best equipped hardware stores in the Southwest. The contract calls for a \$20,000 building to house the business of this progressive concern.

“Big Business” Buys UNITED Spark Plugs

Owners of big truck fleets buy United Spark Plugs because they survive the hard work and abuse of truck service.

United Spark Plugs provide consistent ignition day in and day out—they serve. And truck owners want the “Lockt” terminal—for it gives a positive contact that no truck vibration can loosen.

There are many repeat orders of United Spark Plugs—“Big Business” buys them again and again.

United Spark Plugs are guaranteed—and you make a liberal profit on each sale.

UNITED SPARK PLUGS

WINCHESTER

Tools

NEW PRODUCTS AND

FOR fifty-three years the Winchester Repeating Arms Company has made and marketed guns and ammunition.

During this half century the Winchester Company has endeavored sincerely to give every customer, large or small, the finest merchandise it could make.

And it has tried to deal fairly in all ways with every patron.

Winchester now enters two new fields of effort:

First: The making and marketing of Winchester Cutlery, Tools, Fishing Tackle, Skates, Flashlights and other new products.

Second: The operation of Winchester Retail Hardware and Sporting Goods Stores and the selling of Winchester products through selected dealers.

We believe that the manufacturing personality which has built world-wide respect for Winchester Guns and Ammunition will produce a character in Cutlery, Tools, Fishing Tackle, etc., that has not been offered the public heretofore.

Cutlery

RETAIL STORES

And we believe that Winchester organization methods applied to Winchester Stores will develop a retail service unprecedented in the merchandising of hardware and sporting goods.

This new Winchester plan is one of the largest undertakings in the history of American business. Its object is economic: To manufacture hardware and sporting goods in volume and fully up to the finest traditions of Winchester, and deliver them to the consumer at the lowest possible cost.

We hope and believe that this plan will benefit the American public; likewise all of our competitors.

Signs reading "THE WINCHESTER STORE" are appearing on leading retail hardware and sporting goods stores. This sign will be found to stand for the same sincerity which for half a century has enriched the name Winchester throughout the world.

WINCHESTER REPEATING ARMS COMPANY
New Haven, Conn., U. S. A.

WINCHESTER

REIERSON NEW U. M. C. PRESIDENT

At a meeting of the directors of The Remington Arms Union Metallic Cartridge Company, Inc., recently, Charles L. Reiersen was elected president to succeed H. S. Kimball, resigned. Mr. Reiersen has been first vice-president for several years and for a number of years has been connected with the Remington organization. He is one of the most widely known men in the hardware and sporting goods field. According to the announcement of Samuel F. Pryor, chairman of the managing committee, Mr. Reiersen's promotion is a reward due him for his years of service and his ability to handle big affairs.

INDUSTRIAL DIRECTOR NOW WITH GENCO

The Industrial Cooperation Committee of the American Hardware Manufacturers' Association announces that Mr. H. P. Robinson has resigned as director, to take effect January 15th, 1920, in order to accept a position with the Geneva Cutlery Corporation of Geneva, New York. Mr. Robinson carries with him to his new field of activity the cordial good wishes of the committee and, we feel sure, of the many manufacturers with whom he has come in contact, both in his connection with the Cooperation Committee and in his work in Washington with the Hardware Manufacturers' Organization for War Service.

The committee has been fortunate in obtaining Mr. Samuel W. Mifflin to succeed Mr. Robinson as director. Mr. Mifflin is a graduate of Harvard University, class 1901. He was connected for an extended period with the Emergency Fleet Corporation. He is a member of the Bar in Pennsylvania, has practiced law and has had in addition a varied business experience.

A FEW TRIALS AND TRIBULATIONS OF A BUSY HARDWARE SALESMAN UP TO DATE

It's HARD to WARE your brains away—

On NUT-ty problems every day,

On customers who AUTO buy—

SUPPLIES, no matter if they're high,
You PLUG away and WASTE your time—

To keep the SPARK of life in line,
You BOLT your lunch, and hurry back—

To find a maiden wants a TACK—

To NAIL a picture on her wall,

And says good bye, Sir, that is all.

You climb a LADDER to the top—

And then your patron says, Oh! stop,
That's not the TOOL I want today—

Excuse me, Sir, I meant to say—

I want a thing to bore a hole,

A GIMLET for the poor old soul.

Another comes with a tale of woe—

And claims her CHOPPER will not go,

A little SCREW is all she needs —

That satisfies, and home she speeds.

The next a Painter with a PAIL—

Says, have you PLASTER here for sale?

You take his PAIL, and down you go—

To cellar, where you stub your toe,
Come back with clothes as white as snow.

Before you have the time to BRUSH—
The next is always in a rush.

An order comes, that bends your back—

A hundred pounds of LIME in sack.

Next a Carpenter makes a call—

And wants a PUNCH, but means an AWL.

A maiden enters, and she brings—

Knotted cords, and knotted strings.

To measure for a POLE and RINGS.

And so it goes, it's very PLANE—

You've done your BIT—next day's the same.

—REEGTERHYMER.

APCO OPENS COAST BRANCH

The Apco Manufacturing Company of Providence have just announced the opening of a Coast branch at 451 O'Farrell Street, San Francisco. This branch will be in charge of C. G. Dippel, for a number of years with Chanslor & Lyons, and later in the capacity of branch manager for the M. & M. Company of Cleveland.

NEW KANSAS CITY OFFICERS

After a banner year in which 15 new members have joined the roll the Kansas City Hardware Club has just elected the following officers: J. H. Kenison, president; T. V. Weinholdt, vice president; John C. Long, secretary; F. A. Ellfeldt, treasurer.

The majority of the members of the club belong to the Western Association, which just held one of the best conventions in its history. The meetings were held at the Century Theater and there was only standing room left after the meeting was under way. The club went to St. Joseph in a body to attend the convention of the Missouri Hardware Association the middle of February.

NEW ACORN OFFICERS

At the meeting of the Board of Directors of Rathbone, Sard & Co. late in January, the following new officers were elected for 1920: Russell E. Sard, president; John D. Green, vice president; Arthur M. Blanchard, vice president and secretary; Sidney H. Kent, treasurer; William E. Palmer, assistant secretary.

Mr. Green has been connected with the trade for twenty-five years, and has been identified with the Detroit Stove Works for eight years. The other officers have long been distinguished Acorn boosters. Under their able guidance nothing but success can come to the Rathbone Sard Co. for the coming year.

PASSING OF NORTHWEST PIONEER

The northwest hardware trade lost one of its pioneers and Waitsburg, Washington, mourns perhaps the dean of its hardware fraternity, in the passing of L. H. Macomber last month. Mr. Macomber's death came as the result of a paralytic stroke combined with hardening of the arteries, and he was 72 years of age.

Originally from New York state he worked out into the middle west, and first entered Oregon in 1887, where he went into partnership with E. W. McCann. Mr. McCann has been his close friend ever since, and has survived him on his ranch at Rice, Washington, where he is raising Guernsey cows. For thirty years Mr. Macomber has been in the retail hardware business at Waitsburg, half of which time his partner was Mr. McCann. Mr. Macomber was a leader in his community and served on the City Council as Mayor and Councilman for 12 years.

BERGER CATALOG FOR EVERY USER

Upon an inspection of the new 200-page catalog of the Berger Mfg. Co., we can not but wonder at the desire of the company to have one of these catalogs in the hands of every dealer handling Berger goods in the United States.

Although in former years it has been the policy of the company to furnish a discount sheet applying to every catalog, under present conditions, due to constant changes in price, it is impossible to make up a list of discounts that would hold for every length of time. The company will be pleased to quote prices on anything in their line upon receipt of specifications.

Pictured and described in the catalog is every item in the Berger extensive line of metal plates and sheets, together with roofing material, metal lathes, stove pipe fittings and tools. Upon application to the Berger Mfg. Co., 229-237 Arch St., Philadelphia, this catalog No. 9 will be gladly sent to any dealer upon request.

Only Our Output Can Limit Your Sales of AC's

As long as we continue to manufacture more and more spark plugs each year, and as long as AC Spark Plugs continue to merit the pronounced preference as original equipment that they now enjoy, dealers stocking the AC line can be sure that their sales and profits will increase in proportion to our production.

The demand for AC's is tremendous and growing daily, due to the unfailing service that they give and to our policy of stimulating their sale through a widespread and consistent advertising campaign.

Concentrate on the complete AC line for a profitable, permanent and growing business of quick turnovers and customer good will. Dealer information sent on request.

"TEACHING DAD"

(By L. J. Banks)

Dad used to say old-fashioned hogs were good enough for him,
Why pay a lot of extra cash to get a name thrown in?
He bought a saw-toothed razor-back with flattened, turned-up toes;
With all the curl out of his tail, and with a Roman nose.

This hog was built for climbing trees, could outrun all the steers;
His ears were big and lopped and thick; his eyes were full of tears;
His sides looked like a picket fence; his knees were wearing thin;
His front legs bent together close to keep his lungs tucked in.

His front and hind legs didn't match; he slanted like a roof;
His ham looked like a frying-pan that ended with a hoof;
His hair was coarse and thin and long, where lice hatched, lived and died;
They had to work themselves to death at cutting through his hide.

Well he ate corn and fed the lice, but managed to keep thin,
So father said he'd fatten him and then we'd ship him in.
He fed him corn out on the ground—he got what wasn't wasted.
Pa used so much expensive feed the silver must have tasted.

About the time the corn gave out we found h'd changed his diet;
Where all ma's chickens used to me, was feathers now and quiet.
That settled things for ma and pa—she sued him for divorce.
Pa sold the pig for court expense and took to drink, of course.

The butcher tried to kill that hog with only just an axe.
At last they used a gatling gun, if what they say are facts.
They made him into sausage meat, and sold it in our town;
The butcher lost his happy home—the people burnt it down.

About this time the farm adviser organized a club,
To get us boys to raise a hog that wasn't such a scrub.
He taught us how to feed it, too, and made us dip and spray.
He said unless you used your head you couldn't make hogs pay.

We boys were game for anything and gave the thing a try.
We vowed we'd show these scrub hogs up and prove what kind to buy.
Pa laughed at me for thinking I could make a porker pay.
He said experience on the farm beat theory any day.

I figured I'd give both a try and mix them up a bit.
I cleaned and sprayed ma's chicken house—she had no use for it.
And then I bought a pure-bred pig—bid on her at a sale.
She had good bone and silky ears and curlers in her tail.

I fed a balanced ration, made her beat a pound a day.
Dad, he kind of changed his tactics, couldn't think of much to say;

Whistled easy—but I heard him—when we drove her on the scales.
Six months old and weighed two hundred—figures tell no fairy tales.

But I broke another record when I sold her—that won Dad.
Two hundred dollars, with her papers, for a gilt was not so bad.
Pa has changed his way of feeding, has pure-breds instead of scrubs.
Now we own a pure-bred auto, leave the Fords for moss-back dubs.

MONEY MAKES THE BUSINESS GO

Money makes the business go. You have to make a living profit to run a business, otherwise the business soon has you on the run and the sheriff on the job.

Twenty per cent profit on sales: twenty-five per cent business expenses—result, disaster!

"These competitors who sell goods below cost do not trouble me," said a shrewd hardware man; "it is the fellow who can sell lots of goods at a living profit who will be my real competitor."

Never boast of the amount of business done during the day unless you can show profit enough to feed the mare at night.

Money makes the mare go every time you take a cash discount—cash discounts are the easiest money you make. You save a wad of money from one year's end to the other, if you take advantage of all cash discounts.

It takes real money to buy goods for cash, but it makes you a bit careful about over-buying. You say to yourself: "Hold on now, John Smith, remember that cash discount." The old Scotch proverb says: "Many a mickle makes a muckle."

Money makes the mare go when you use it to pay the salary of efficient clerks who will see that the business mare is well groomed and made attractive, and firmly fastened to the public wagon by the traces of courtesy and tact.

You have to hitch up the mare before she can travel. I have noted that the hardware clerk who had rather sell goods than to eat is dead sure to do both.

Any hardware man can pay for space—for black ink and white paper—but when you write an ad it takes real ideas to make the mare go. Do not try to exhaust all the adjectives and superlatives when you write an ad—exhausted readers are the natural result.

There are a lot of folks in the world with plenty of horse sense—hard sense and hard cash—folk who can think for themselves; just give 'em something to think about.

Booth & Herboth are just moving into their new quarters at Marysville, California, where they expect to do an excellent business the coming year.

MOSSBERG

ALL STEEL Wrenches and Tools

A MOSSBERG Wrench for every need; adjustable, open-end, socket wrenches; socket sets (most complete), special wrenches for automobile, truck, tractor and Ford car equipment—A “Mossberg” for every requirement.

Hardware dealers stock the Mossberg line of **all steel** wrenches because the individual wrench or socket is strong and convenient—it is the result of long study of wrench needs. And this one line is so complete that it meets the needs of every customer; and special sets arranged for the garage man, the expert machinist, the motorist, the marine engineer, sell on sight.

Send for catalog and get acquainted with the various styles and finishes of the Mossberg line.

FRANK MOSSBERG CO.

Wrenchsmiths for 20 Years.

LAMB ST., ATTLEBORO, MASS., U. S. A.

IF YOU EVER CLAIM AGAINST A RAILROAD FOR LOST OR DAMAGED GOODS, READ THIS

(Copyright by Elton J. Buckley.)

A case has been brought before the Interstate Commerce Commission at Washington, which if successful, will make a marked change in the method of making claims against railroads for lost or damaged goods.

In the uniform bill of lading, there is a provision that unless claims are presented within six months (or if the claim is for goods not delivered, then within a reasonable time after failure to deliver), they are barred and cannot be presented at all. So far the provision is reasonable, because the railroad has a right to know about the claim while the thing is fresh and when it can prepare its defense if it has one.

But the provision goes further and bars any claim on which suit has not been brought within two years. This would be reasonable, too, if railroads would treat their customers fairly, but they have a practice of keeping a claimant from entering suit by sending him a series of letters, "We are still investigating your claim and will be ready to report on same very shortly," or "We have not yet completed our investigation of your claim, but will report to you promptly upon doing so," etc., etc., so that before the claimant knows it he is past the two-year limit without bringing suit, and the railroad's thumb is at its nose.

The situation was made worse several months ago by two United States Supreme Court decisions that a railroad which had issued a bill of lading with the above provisions in it could not waive it; in other words, it could not legally pay a claim on which suit had not been brought within two years, no matter what it had done to lull the claimant past the date. I wrote an article about those decisions at the time; before that the law had been that a railroad could waive, and that it might be compelled to pay even after the two years had passed.

The case now brought before the Interstate Commerce Commission is to strike out the two-year limitation. It was brought by a Western concern named Jacob E. Decker & Co., and commercial organizations from various sections are asking to intervene. All of these interests take the position expressed in the following, which is an excerpt from the petition of the Merchants' Association of New York:

VI. That it is repugnant to public policy that a carrier may escape its liability by claiming as a bar to recovery, the fact that suit had not been brought within two years, when the carrier had unavoidably or otherwise delayed its investigation beyond the two-year period.

VII. That as claims for loss, damage or injury are now barred if not presented within six months, it would be against public policy, where claims were law-

fully presented, and were under investigation by carrier, to again require that the claimant in order to conserve his interest shall file a suit for recovery of the loss, damage or injury claimed; that such a course of action in view of the dilatory methods employed by the carriers in the adjustment of claims would lead to a multiplicity of suits.

All this controversy would be made unnecessary if freight shippers or receivers whose goods are damaged or lost in transit, would follow the plan I have for years followed in such of these cases as have come to me, viz.: make claim on the railroad as soon as it arises and all the facts are available, giving it a fixed liberal period to settle, then if settlement is not made promptly at that time enter suit, investigation or no investigation. Ordinarily a railroad would be entitled to some time to investigate the claim, if it acted in good faith, intending to make its investigation with all diligence and to pay promptly if it found itself liable.

My experience and observation have convinced me, however, that railroads do not act in good faith, but deliberately delay claims for two selfish reasons: first, in order to get the claimant past the suing date so he will be helpless; and, second, in order to take advantage of the well-known fact that the staler a claim against a railroad gets, the less likely the claimant is to do anything about it. Therefore after the first period allowed for settlement has expired, I promptly issue a writ against the road and push the case as rapidly as possible. It is astonishing how many of these claims are settled as soon as suit is brought—claims that the railroads would still be "investigating" three years after, if they were not pressed, but which they knew (or could have known) that they owed from the very first minute. I earnestly advise every reader hereof who has claims against a railroad to try this plan.

I said a moment ago that my practice was to make the claim as soon as the facts are available. Usually they are available at once. For instance, take a shipment of goods from New York to Norfolk, Va. They turn up badly damaged. The only evidence needed there is the bill of lading, showing the receipt of the goods in good condition. If the damage was due to a latent defect which the railroad could not have seen, you must prove they were in good condition by the testimony of the shipper. This evidence to be followed by evidence that when received they were in bad condition. In other words, you must simply prove that the railroad got the goods in good condition and delivered them in bad, or didn't deliver them at all. This is evidence usually very easy to get, and nine times out of ten the railroad can have no defense to it and you will get judgment.

At the recent annual meeting of Baker, Hamilton Pacific Co., Mortimer Fleishacker was elected to fill the vacancy caused by the death of Jesse W. Lillenthal.

RESIGNATION OF MR. H. J. READ

What has been his dream for some time has become a fact and reality for H. J. Read, general manager of sales of Baker, Hamilton & Pacific Company. Living in the open on the farm has been a temptation to Mr. Read for many years, but his exacting duties and responsibilities have made it impossible for him to make the move.

Now, after 23 years of service in the western trade and having reached the top of the ladder in his chosen work, he leaves his office. Following we reproduce Mr. Read's letter of resignation directed to his big commercial family, as originally published in the "Stilleto," the house organ of the Baker, Hamilton & Pacific Company:

February 11, 1920.

To My Fellow Employees:

After 23 years of service in the employ of Baker & Hamilton and the Baker, Hamilton & Pacific Company, I feel obliged, in the protection of my health, and that I may have time to look after my own private business, to hand our employers my resignation, and have done so, effective on or about March 1.

It affords me great pleasure and unspeakable satisfaction to say that after the long connection I am leaving them with their best wishes. No doubt, if I should elect to do so I could remain with them for many years to come. They have at all times been kind and considerate and made my position as comfortable as possible, but the very character of the work made it a strain from which I feel obliged to be relieved. Therefore, at the end of this month my official relations with you will cease, but may I not hope that our present personal relations may continue?

What small measure of success may have attended my efforts I believe is largely due to your intelligent and conscientious co-operation. I therefore take this means of thanking you for your many, many manifestations of good will.

I have no future plans but I do not expect to meet you as a competitor, rather always as a co-worker, advancing the interests of Baker, Hamilton & Pacific Company.

I most cordially wish you success in your future efforts. Yours sincerely,

H. J. READ.

The sporting goods department of the Palace Hardware & Arms Co., Phoenix, Arizona, has been moved into new quarters, and the business will be conducted along larger lines than ever.

APCO OPENS CHICAGO BRANCH

The Apco Manufacturing Company have announced the opening of a Western branch at 180 North Market St., Chicago, Illinois. This branch will be in charge of W. B. Dean, whose twenty-odd years in the equipment business well qualifies him for this new position. This is the second Apco branch opened this year, the other one being in San Francisco and managed by C. G. Dippel.

STERLING TIRE REPORTS AND PLANS

At a recent special meeting of the stockholders of the Sterling Tire Corporation there was authorized an issue of \$1,000,000 8% Sinking Fund Preferred Stock, \$500,000 of which will be offered for sale for the purpose of supplying additional working capital made necessary by expanding business. Sales for the year 1919 were approximately \$3,300,000.

The directors of the corporation expect a big increase in 1920, as some two and one-half million dollars of business have already been signed up. The organization of the Sterling Tire Corporation has been strengthened by the election as president of A. A. Altshuler, president of the International Fidelity Insurance Company and a director of the Union Trust Company, both of Jersey City.

The Board of Directors also include Frank A. Ball, vice-president of the L. S. Starrett Mfg. Co., the largest manufacturers of machine tools in the country; Walter Bound, vice-president of the Troy Laundry Machinery Co.; J. M. Rector, one of Jersey City's leading and substantial citizens. The remaining directors are all actively and exclusively engaged in the business of the Corporation.

EXPERTS WANT PILLIOD TOOL CASES

Herewith we present reproduction of new Model 70 of the Pilliod Portable Tool Cases built for service by the Pilliod Lumber Co., Swanton, Ohio. Its makers claim for these tool cases that they are the strongest on the market, and over 40,000 are now in use. Every Pilliod Case is absolutely guaranteed to be exactly as represented, and of first class material and workmanship throughout. It is warranted to stand up under ordinary use.

In making these cases the drawer slides are inlaid, insuring a perfectly tight joint. In dovetailing the drawers there is a double lock in front and a half lock in the rear. There are no nails to work loose and come out. A Pilliod drawer has never been known to come apart. The seven drawer case pictured herewith is the same as style 50 and 55 of Pilliod cases. It is especially preferred by those who wish to carry the heavier tools on top.

Special carpenter's portable case No. 70 is also pictured herewith, being built of wood and fibre it is novel in construction and light in design. The price of this case is \$9.50. Any dealer or merchant interested in carrying a modern and approved line of tool cases will do well to communicate with the company direct if information can not be secured through the nearest jobber.

MARQUETTE LUGGAGE CARRIER

WISDOM IN THUS DIVIDING YOUR BUSINESS EGGS

Divide your business eggs—your precious dollars—with care. If you take no pains in the buying you will surely have pains in the selling.

Better take pains in the beginning—are not growing pains rather to be chosen than dying pains?

Do not be too chary of brain perspiration, a few live thoughts will be more profitable than a lot of dead goods later on.

Think! Think hard! Think clear through!

If you think half way through you may say: "My sales of carpenter tools amounted to so much for the past year." Yes, but are conditions the same this year? If building has dropped, if demand is less, you must of necessity transfer a few of those eggs to another basket.

Make Your Own Decisions

There are hardware buyers and there are hardware leaners. A real, dyed-in-the-wool hardware man makes his own decisions, but a hardware-leaner practically leans hard upon the salesman and says: "Please make all my decisions for me."

There are salesmen—thank the Lord!—who would do their best for a patron, even if they never made money enough to purchase a Ford and an extra shirt, but your knowledge of your field and its needs should exceed that of any salesman.

He is looking at the business map in the large; you have your own small section for intensive study and cultivation.

You know the size of your bank account. You have a good idea, both of the size of your patrons' purses and the extent of their needs.

Get busy studying your field! Bring on the baskets and divide the eggs with care! Use common sense! The bottom of the strongest basket may drop out if we overload it! Business eggs are valuable nowadays!

ATKINS NEW NO. 18 CATALOG

Covering 264 pages descriptive of every item in the extensive line of E. C. Atkins & Co., including the famous Silver Steel Saws, new catalog No. 18 has just been issued by the company.

In these books can be found in words of the company "A perfect saw for every purpose," as well as a better machine knife or tool for every saw mill used.

The catalog has been bound both De Luxe and with a Sunburst cover and ooze leather. Any merchant interested in or handling the Atkins line, who has not a catalog, may receive one through his jobber, through this office, or by applying directly to the advertising and sales promotion department of the E. C. Atkins Co., Indianapolis, Indiana.

Columbia Mfg. Co., Belleville, Illinois, have just issued their grinder book No. 26, covering grinders, buffers, countershafts, and presses for the heavy hardware, mill supply and auto trade. Copies will be gladly forwarded upon application from the main office.

LOSS OF L. M. BUSHNELL

It is with the deepest sorrow and regret that we pass along to the trade the announcement of the death of Lemuel M. Bushnell, formerly president of Vaughan & Bushnell Mfg. Co., Chicago, Illinois.

Mr. Bushnell was closely associated with this large manufacturing concern for forty-two years, retiring from the presidency and from active business life six years ago. His sterling character in business and private life drew to him the admiration and love of a host of friends and associates, who join **HARDWARE WORLD** in mourning his loss.

The Boyle Scanlon Hardware Co. has filed articles of incorporation at Pocatello, Idaho, with a capital stock of \$50,000.

Anderson & Bohck have purchased the furniture stock of their neighbor, H. R. Merchant, at Asotin, Washington, and will merge it with their hardware business, cutting a door through between the two stores.

AS LONG AS "MONEY TALKS" and QUALITY SELLS

there'll be satisfied users and new prospects for Gem Razors and Blades

Selling Safety Razors is a whole lot like selling real estate—you have to chase up your prospects and convince them that your product is right, all the way through. Shaving, like other personal matters, is something that many men permit to go along very unsatisfactorily, simply because they think it is a necessary evil that has been wished onto the male sex.

However, there isn't a man anywhere that isn't really interested in getting a better shave. He will listen to your shaving arguments, because he is interested in securing the greatest possible satisfaction and utility out of a razor. He wants, at the same time, to be economical, and get a razor whose upkeep is small, a blade with a long life of usefulness.

Such prospects are found everywhere. To sell them Gem Razors and Blades is easy, because there are millions who testify voluntarily that the GEM is their safety razor, because it leaves the smoothest face, that velvety and fresh after-feeling that men enjoy, and because Gem Razors are always easy to get, both from the standpoint of price and place.

And here's the thing that should interest you: You do make a good profit; you are protecting your own good will; you are building up a profitable accessory business. All you need to do is put the Gem Safety Razor on display and WATCH IT.

If you aren't selling as many Gems as there are prospects for your store, better stock up and take advantage of some deal price, and then follow up the live prospects—there are millions of them.

U. S. GOVERNMENT ADVERTISING

The **HARDWARE WORLD** is one of the very few publications selected by the War Department in which to advertise the surplus supplies of the War Department.

In our February issue a twelve-page advertisement was inserted. In our issue this month an additional list of eight pages is inserted, and an additional list will be released from time to time.

These announcements should be noted with unusual interest by the entire trade.

NOW "GRANDPA" TRITCH

George Tritch, formerly president of the Tritch Hardware Company, of Denver, has been spending the winter in Southern California with Mrs. Tritch, and visiting one of his sons who is making his home there.

As a matter of fact, Mr. Tritch has become so enamored with Southern California during his annual visits that he has purchased a home at South Pasadena and plans to spend at least a part of each year there.

Recently Mr. Tritch has been wearing a smile of large dimensions, and it has not taken one long to ascertain that it is caused by the arrival of the first grandchild, and he vows that the first murmur of the little one sounded more like "grandpa" than anything else.

Under the circumstances Mr. Tritch is doing as well as can be expected and wearing his honors with becoming modesty.

OPEN SEASON FOR SPRINKLERS

The sprinkler makers are in the forefront among manufacturers who are behind with their orders, according to word from the Wills Sprinkler Company, manufacturers of the Wills Scientific Sprinkler, at Los Angeles, Calif. Difficulty in getting material and the increasingly larger volume of orders has sometimes put these manufacturers from 30 to 60 days behind during the last year.

They are looking forward to a banner year during 1920 and under these conditions are getting into shape and making arrangements to make the sprinkler more quickly and more efficiently than in the past. Further information may be obtained from the office and factory at 607 Crocker Street, Los Angeles, Calif.

WHY DO FISH SWIM UP STREAM?

Fishing Minus Wading Boots Means Poor Results

Have you ever paused to consider the reason trout anglers wade in the water while casting flies instead of contenting themselves by fishing from some shady neck on the banks of the stream?

For those who haven't, the answer is volunteered by Joe Welsh, of the Pasadena Hardware Co., who is rated as one of the cleverest exponents of the doctrine of the late Sir Izaak Walton.

It is simply this: "The trout sees the angler a long time before the angler sees the trout, as a rule, but the trout is more likely to see the angler if the latter is on the bank of the stream instead of in the water."

Swimming Down Stream With Current Opens Gills

This is explained by reason of the fact that fish swim up stream; that is a habit they have acquired to keep from drowning—oh, yes, a fish can easily drown, if his gills through which he breathes are held open—and when he attempts to swim down stream the water forces his gills open and he can't breathe.

The fly caster always casts up stream, so that he usually drops his fly ahead of the unwary trout. An angler fishing from the bank usually drops in his line without considering where it falls; then again, a fish swimming at an average depth and looking ahead at an upward angle, has lesser volume of water to look through than would be necessary if he looked backward to the distance from which the angler casts his fly.

Now that this intricate point in angling is understood, no one will ever again go fishing without his wading boots.

ATLAS TACK COMPANY REORGANIZED

To enlarge its producing capacity in order to take care properly of the constant increasing business the Atlas Tack Co., at Fairhaven, Mass., has reorganized its business and largely increased its capital.

The new corporation will be known as the Atlas Tack Corporation, although under the same management. The productive capacity of the company will be added to as fast as the necessary facilities can be obtained. The company at the present time is away behind on its orders, and could sell an unlimited demand if facilities were at hand.

BISSELL'S NEW OFFICERS

At the recent annual meeting of the stockholders of the Bissell Carpet Sweeper Company the following officers were elected for the ensuing year: **Mrs. M. R. Bissell**, Chairman of the Board; **F. M. Deane**, President and Treasurer; **T. W. Williams**, Vice President; **Mr. R. Bissell, Jr.**, Vice President; **R. E. Shanahan**, Secretary and General Manager. Directors: **Mrs. M. R. Bissell**, **T. W. Williams**, **F. M. Deane**, **M. R. Bissell, Jr.**, **Irving J. Bissell**, **W. R. Gill** and **R. E. Shanahan**.

The Bissell Company's business for the past year, both foreign and domestic, has been very satisfactory.

COMMUNITY SINGING AS A WELDER OF PERSONS

An interesting innovation was noticeable this year in the programme of many of the hardware conventions just held in that community singing was used to open many of the sessions.

Five or ten years ago the man would have been considered somewhat weak minded who would say that a group of hard-headed business men gathered together for the purpose of trade consultation would open their sessions with song, particularly song of a popular nature, yet now such a practise is a reality, and what is more, the delegates at the different conventions entered into the spirit of the community singing with a whole heart and full melody.

Community singing is perhaps the outgrowth of war conditions. When the young men were gathered at the military and naval camps, over the breadth of the land, and on foreign shores, it was found that no single institution went more towards congeniality and fellow feeling than this habit of singing together, the military departments employed leaders, who should direct the singing, and thus weave the spell of good fellowship, loyalty and ability to work together, over the men assembled.

The same result can now be accomplished in civil gatherings of men. A certain restraint is broken by the singing. There is an opportunity for self-expression and it seems to be that the singers themselves are as glad to hear singing voices as are all others in the vicinity.

It has been suggested by the students and leaders of community singing that it is a novel and effective substitute for the liquor that was a factor at many of the former conventions. A certain relax is made possible, and a restraint of dignity and self consciousness is removed without any ill effects.

There is an elation of spirit through singing, especially in the singing of emotional or light songs. Thus we hope to see the habit grow of community singing among hardware men, as well as any other business men gathered together, to the end that harmonious fellow feeling may be engendered.

Factory Branch

109 New Montgomery St.,
San Francisco, California

Factory, Bedford, Ohio

of accessory manufacturers and distributors from all over the United States. During the session thousands of automobile merchants of the Pacific Coast will gather in attendance. San Francisco is the distributing center for automobile accessories throughout the entire far West, and such a gathering of the members of the industry will undoubtedly add interest and vigor to the history of the year.

During the Exposition the doors will be closed to the public until 1 P. M., no one being admitted except jobbers and dealers and exhibitors. Recognized jobbers will have desk space in a room off the main floor. All dealers will be admitted free, and will wear distinguishing badges. The Exposition is being arranged by Arthur Bryson and F. R. Quigley from their office, 816 Gillette Building.

LIVE ACCESSORY DISTRIBUTORS

Among the most energetic and lively distributors of automobile accessories in the northwest is the United States Manufacturers' Sales Co., with offices in the Spalding Building, Portland, Oregon.

These distributors maintain their own selling force over the territory, and have branch headquarters in the other cities on the Western coast. O. A. Perry is the active organizer of the concern, and is responsible for its growth. Among the lines represented are the Twin Fire Spark Plugs, Zenith Carburetor, the Kay-Bee Mfg. Co.'s goods and the accessories of the Phoenix Laboratories, of San Francisco.

The Corpus Christi Hardware Co., Corpus Christi, Texas, is erecting a modern 2-story concrete building, to be used as a wholesale house in that place.

The Dickinson Hardware Co., Colorado Springs, Colorado, has moved its stock and business across Tejon Street, in order to better the location.

RADIATORS FOR FORDS

Elsewhere in this issue is announced the Peerless Radiator No. 11, made to fit all models of Ford cars since 1917. It is constructed on the honeycomb principle, and is practically freeze and boil proof. All parts coming in contact with the water are of durable brass and the radiator may be obtained in an outside finish of Japan or nickel. At its factory, Section Avenue, Norwood, Cincinnati, Ohio, the Corcoran Mfg. Co. also produces hoods, radiator and hood combinations, fenders, tool boxes for Ford cars, and will be pleased to send a catalog to any of our readers upon request.

SEND US YOUR HOUSE ORGAN

Many of the more progressive merchants and companies in the hardware trade are now seeing their way clear to issue a periodical within their own organization. Some of these little papers are issued monthly, from time to time, and some even more frequently.

Excellent business bringing results have been reported to us from such a policy of keeping customers and prospects in touch with the new lines, changes in organizations, and especially attractive buys.

The **HARDWARE WORLD** would be particularly pleased to have any of our subscribers now issuing such house organs put this publication on their mailing list in order that we too may follow the progress of the organization, and the success of house organs as an advertising medium.

As a reward of sixteen and a half years of faithful employment, Andy Austin has been admitted to the firm of Mills & Cowles at Olympia, Wash., and henceforth it will be known as Mills & Austin. This is one of the most historic firms in the northwest, its record dating back to 1875. For the last twenty-four years it has been operated under the name of Mills & Cowles.

ROMORT AIR STATION

WILL BLAZE THE TRAIL TO YOUR ACCESSORY DEPARTMENT

The New Romort Air and Water Station successfully solves that perplexing problem of bringing the automobile owners to your store. With its electrically lighted globe it is on the job 24 hours a day, a constant reminder to car owners of your service. And it is service to car owners that paves the way for big business in your accessory department.

Why a Romort Air Station?

The new Romort air and water station completely overcomes all the objectionable features of the dirty, grimy and usually broken curbstone air hose and the bothersome old water bucket.

EXCLUSIVE FEATURES APPRECIATED BY ALL WHO KNOW

With the New Romort Air Station the air and water hose is held clear from the ground at all times. The binged air pipe automatically returns to a vertical position after using, which prevents the hose from dragging on the ground. The flexible wire armor and the automatic air valve prevents kinks, breaks or short bends in the hose, and there are no joints to leak, as there is one continuous hose from the valve to the base of the stand. The New Romort Air Station is so designed that it can be used with an inside air tank or with an air compressor in the base.

Built in four styles.

- No. 11 Curb Air Station.
- No. 12 Curb Air Station with water.
- No. 13 Curb Air Station with electric air compressor in base.
- No. 14 (Same as No. 13 with pay attachment.)

THE DANGERS OF THE POSTAL ZONE LAW

(By Senator Arthur Capper, of Kansas)

There is no subject of greater importance to the public than that involved in the postal principles on which is based our postal legislation. The present postal zone law needs careful consideration, and every citizen and home throughout this nation should earnestly endeavor to understand the important factors involved.

For there is no function of government that reaches every citizen and every home to the extent of our United States postal service. For over seventy years the history of our postal legislation shows that our country has not legislated for postal service on the basis of cost, because the postal service is of such universal benefit, is such an instrument of information and education and unification, that to restrict it in any way is to hurt the country that we as thinking citizens wish to serve. So clearly and firmly has this American postal principle been held, that postage cost must not determine the postage rate, that our postoffice has delivered letters and publications to Yankee whaling ships at Point Barrow in the Arctic Circle for two cents that cost over \$5.60 to deliver. I would ask any thinking citizen if it is not just as important that a Yankee skipper home from a whaling cruise shall be able to understand and vote intelligently upon the great public questions of the day as it is for the citizen who has stayed at home? This principle is sound. Shall not California, Kansas and Maine have equal postage on all information as an American right?

Our rural free delivery system—the most expensive and least revenue-producing branch of the postoffice—costs 1½ cents per piece of mail matter, and this 1½ cents is over and above the cost of collecting, sorting, handling, transporting and rehandling until it gets into the rural free delivery carrier's wagon. This has all

been done upon the American postal theory that the postoffice function was a service to the American people and that the cheapness of postage was a benefit to the American home.

It has been alleged—and maybe some have fallen victim to its un-American and illogical absurdity—that cheap postage on magazines and newspaper is a subsidy to the publishers. It is not a subsidy to the publishers. It is, if you want to use the term "subsidy," a subsidy to American readers. You can determine this for yourself. Who receives the benefit or subsidy when the Yankee skipper of a whaling ship off Point Barrow, in the Arctic Circle, receives news from home which costs \$5.60 to deliver? Is that a subsidy to his home newspaper, his periodical or magazine, or is the benefit of that to the ship captain himself and his citizenship and our united and national standards of intelligence?

You will instantly recognize that it is this ship captain receiver of costly postal service who is benefited, and your common sense will instantly prove to you that in every case of cheap postage the primary and entire benefit is to the receiver. Would you have Kansas pay higher postage than New York merely because any information happened to be printed in New York? Why handicap the postal service of Kansas by a higher and discriminatory postage rate? I come from Kansas, but the discrimination is similarly true of every other state.

Cheap postage on periodicals and newspapers has made the American nation a nation of readers beyond any nation in the world. If there is any thought in your mind that this is not a national benefit, I ask you to compare in your mind this great country with its splendid and homogeneous American idealism, its singleness of purpose and the universality of its achievements with those nations in the world in which there is but little magazine reading.

Now as a practical proposition. You know the economic law that all costs must ultimately be paid by

Users Buy by Name

those things that give them greatest satisfaction. Which is true of wrenches. Carry the best wrenches that users have found, through experience, to be thoroughly dependable—

"HEXALL" Socket Wrench No. 5—8 Pcs.

"HEXALL" Ratchet Socket Wrench No. 2.
11 Pcs.

"HEXALL"

Trade Mark Reg. U. S. Pat. Off.

SOCKET WRENCHES

and you have a fast-moving line, generous in profit, a promoter of lasting friendship and goodwill. For, there are no better wrenches made than "HEXALL"—a set for every need. Every "HEXALL" has that bulldog strength which is the result of long experience in fashioning steel for this purpose. Thus, handles are drop-forged; sockets are made from the bar on automatic machines, broached and case-hardened. And, not satisfied with the production of mechanically-perfect tools, the makers guarantee every "HEXALL":

"Break Any Sedgley Wrench and We Repair It—No Charge"

R. F. SEDGLEY, Inc. Est. 1897 2311-13-15 North 16th Street, Philadelphia, Pa.

Pacific Coast Representatives: McDonald & Linforth, San Francisco, Cal.

the final consumer, i. e., in this case the reader. To raise the postage on publications means that the publishers, as business men, must add this charge to the price of their periodicals—and thus lessen reading. Is this a good thing? And again I ask every reader to consider those nations in the world which have never encouraged widespread reading nor the widespread distribution of periodicals and newspapers, and to answer that question. For it is one which I and other legislators in Congress have to face and with which we must deal.

This country had a postal zone system at one time, applying to letters and newspapers and periodicals. The abolition of the zone system was made complete by President Lincoln in 1863 and the zone system was abolished not only on periodicals and newspapers, but also on letters, because it was regarded as an unsound postal policy and un-American that a citizen or home should have to pay more postage simply by an accidentally greater distance from the point of mailing. The postal service is an American service from all Americans to all Americans on a basis of equal postage and equal service. I ask every reader to consider for himself if this is not sound Americanism.

Now on the practical side I wish to point out that the country newspapers have circulation in their county of publication without any postage charge whatsoever and this can only be justified and continued on our American theory that the postal function is an equal service to all American homes.

It would be obviously unfair for those supporting the postal theory that the cost must determine the rate of postage to ask that a letter costing $1\frac{1}{2}$ cents for delivery alone on rural routes should be sent for 1 cent. I do not have to be convinced that we should have 1 cent letter postage. I am for cheap postage as a great American social service. I believe that every right-thinking American is for cheap and equal postage. But there is no logical reason for believing that the rate on one class of postal matter must be determined by the rate on another class of postal matter. The figures of postal cost upon which this unsound and un-American postal theory is demanded were compiled in 1907 and upon being investigated by the United States Postal Commission, headed by Hon. Charles E. Hughes, these figures were discarded as utterly unreliable in determining the cost of handling newspapers and periodicals. Yet it is upon these discarded cost figures that such unsound arguments are based.

If we must abolish postal service—or increase postage rates to a prohibitive basis—on the theory that cost of service shall determine the postage rates, we should have to abandon many of the most important of our postal functions, the rural free delivery being the most conspicuous example and one which I believe should be kept up no matter what its cost, as it is the most important postal service in the entire department. It pays too high a return—as does every other postal service—in improved and elevated citizenship.

I earnestly hope that every reader will give this postal zone matter and its revival of unsound postal theories that have been discredited for over two generations very serious thought.

S. M. Halsey at Culesac, Idaho, reports that he has added hardware to his line of implements.

KNOWLSON SPRING SPREADERS

<p>No. 1 Nickel Plated and polished...\$2.00</p> 	<p>No. 3 Gunmetal finish\$1.50</p>

Easy to operate. Fits any spring. All dealers, or sent prepaid—Spring Leaf Lubricator Co., 1008 Forest Ave., Ann Arbor, Mich

AUTO CURTAIN LIGHTS

Bow Sockets, Snap Fasteners Forgings, Stampings, Etc.

Our Improved Pioneer Automobile Curtain Lights dress up any car; many otherwise good appearing cars have been disfigured by the use of cheap looking stitched-in celluloid lights which soon turn yellow, become smeared and brittle and then break—a constant eyesore ever after; but with these Pioneer polished, bevelled plate

glass lights, handsomely framed, and in a variety of styles, sizes and finishes, enabling anyone to secure a perfect harmony with the individual design of any car, and which cannot get shabby looking, as they are so easily washed, the result is a permanently neat, distinctive and fashionable car. And so constructed that they will not give way, yet they are extremely light and require no extra top lining.

Number 144 Radiator Clip

This is the season when Hood and Radiator covers are in demand; therefore great interest in this clip. It is made from No. 24 gauge steel; length $4\frac{1}{4}$ in., width $\frac{1}{4}$ in. Furnished black enameled, complete with Back Plate.

Priced by the hundred.

WINDSHIELD CLAMP

Number 140

Features: A substantial thumb screw or bolt, giving security when clamped to stub on Windshield frame. $\frac{3}{4}$ -in. Socket Hole, offset $\frac{1}{4}$ in. from base that rests on wood bow to center of socket. Slot screw hole, permitting of a side adjustment without changing screws if necessary to adjust.

Number 143 Back Stay

A secure and practical means of attaching the stay strap to the body of the car. The roller feature permits of ease in adjustment of stay strap and eliminates wear on same.

Slot for One-inch Web. Black enameled. Sold by the hundred.

WHAT "SERVICE" MEANS TO MERCHANTS SELLING WASHING MACHINES

(By E. F. Voss, Sales Manager Voss Bros. Mfg. Co., Davenport, Iowa.)

"Service!" This word has been misused many, many times by merchants selling washing machines, possibly due to the fact that the term "service" does not have a very definite meaning. Then, again, the lack of understanding as to just what service means has been the cause of no little dissatisfaction on the part of washing machine buyers.

The writer recently had this brought to his attention while listening to one of our merchants try to sell a washing machine to one of his customers. After giving the customer a thorough demonstration, which could not be improved upon, he secured the customer's order, but just before the customer left, the dealer made the following statement: "Mr. J—, you need not worry about the 'Voss' machine causing you any trouble, but if it does we will take care of you." To say that was nothing but an invitation for trouble. The liability which that merchant assumed in guaranteeing without limit the performance of this machine without limit to the time was out of all proportion to the possible profit he could make on the sale.

The service to be furnished by the merchant is an important (if unmentioned) part of every sale contract. The buyer usually knows in advance the details of the suitability of the machine for his particular use. But "service" which can keep a washing machine in good shape, for a time, or which if not furnished makes an excellent washer of little value, is not talked over and agreed upon in detail before the order is placed.

Some merchants in the anxiety to secure orders, make extravagant claims for their washing machines and offer service in glowing, but indefinite, terms. Other merchants in the territory are tempted to meet the claims of their competitors and soon prospective buyers in the section get the idea that the signing of the order blank and the writing of a check will give them uninterrupted washing machine performance for a year or more—all without effort on their part.

Have Understanding in Advance

The washing machine is delivered and put in service. And then things begin to happen. Merchants are called upon at all hours of the day and even at night, to give service and when the customer receives a bill for the service, he naturally has a fit.

Why not have an understanding in advance as to just what service means? Let the duties and responsibilities of both parties be established before the washing machine is delivered, and thereby overcome any chance of a misunderstanding.

Washing machine service is much more severe than sewing machine service, or vacuum cleaner service and a normal amount of use on a washing machine calls for tightening of belts, oiling, etc., more often than sewing machines or vacuum cleaners for the reason that owners are often unjust in the use of their washing machine, because they do not realize under what condition it operates. As a rule the washing machine is placed in a dark basement and is never seen from one wash day to another, and naturally does not get the proper attention.

Just how far to go in guaranteeing service depends upon local conditions (or the policy of the manufacturer). The replacement of defective parts within one year after the machine is put in use is a point upon which there is little dispute, but even this may lead to complications.

On one new washing machine the motor burnt out, due to an overload in the wringer. The operator who was just using the machine for the second time, had been told that the machine had plenty of power and could pull the heaviest load it was subjected to. This operator after screwing down the tension springs, started to run through a heavy blanket and naturally this stalled the wringer, thereby burning out the motor. The wringer on all machines takes more power than the machine itself, and naturally should be used with reason.

Results of Unintelligent Sales

The owner claimed that he should not be compelled to pay for a new motor and for the labor charged in putting in a new motor, because he had been told that there was sufficient power to handle anything placed in the machine. The merchant advised the customer he would secure a new motor. Naturally the manufacturer was asked to supply a new motor at no charge on account of the first one burning out. The manufacturer, however, required the merchant to pay for a new motor at a charge of \$26.00. This particular job cost the merchant more than his profits on the machine, merely through the lack of effort on his part in instructing the operator how to properly use the machine.

Who was right, the owner, merchant or manufacturer?

Prospective customers for washing machines are not unreasonable in their demands. They like to know "what they are getting into" when they make a bargain and ask nothing more than fair play.

In talking to people to find out what they really think they should have in the way of service from washing machine merchants, I was given the following points:

Six Commandments of Service

1. Offer a thoroughly reliable washing machine backed by a responsible manufacturer. A customer must depend upon the judgment of

Hygrade Ad cut M9 also shown in colors in our Window Display.

Put it in your window

Nothing better than a window display to sell lamps and nothing better than the Hygrade Window Display to help your windows sell

Hygrade Lamps

This attractive display is purposely made very simple so as to be easy to set up. It can be arranged to fit any size and shape of window and can be used with additional material if desired.

A Hygrade window display, backed up by vigorous newspaper advertising in which Hygrade advertising cuts such as M9, shown in the margin, play a prominent part, will help bring lamp business.

Shall we send you the display?

Farmers and Owners of Cars are Prospects

YOU who have in the past handled vehicles and wagons and have lost that profitable trade to the Motor Vehicle, are in a position to get the old volume and more back in handling "Utility Trailers" and without the necessity of giving service or having an expensive service department as is required where you sell motorized vehicles.

Every farmer in your community is a prospect for a Utility Trailer of some sort. Every motor truck running over your highways is necessarily a prospect for a Utility Trailer, if he is to compete with others using them, they bring truck operating cost down to a point where the profits are satisfactory, and truck operating brought out of the Red Ink.

Utility Trailers are motorless auxiliaries to the truck or passenger automobile, bringing you a clean profit when sold and a profit that is yours, not to be later paid out in shop costs of free service as in motorized vehicles.

We have some good territory open, write us for our proposition to dealers.

UTILITY TRAILER SALES CO., of Southwest
1302 Young St., Dallas, Texas

LOS ANGELES TRAILER CO.,
1328 Palmetto St., Los Angeles, Cal.

the merchant about the many details of construction and of workmanship of the washing machine. Right here is where a few merchants make a mistake. Some merchants think only of their own profits and not of their duty to their customers who have faith enough in the merchant to expect him to buy the best machines the market affords. These same merchants will buy the cheapest kind of goods, for the simple reason that they make more profits. Good merchants, however, have found it pays to handle only high class goods and thereby safeguard not only their own good will but the interests of their customers.

2. Have competent mechanics to send out on calls. These mechanics should be trained by the manufacturers' salesmen.

3. Take sufficient time to look over the entire machine, to see that nothing is broken and that it is properly oiled before sending it out on an order.

4. Take sufficient time when the machine is delivered to show the person who is to operate the machine, how to operate it, how to take care of it and how to remedy any trouble. (Be sure you know how to do it yourself before attempting to show a customer).

5. Make good without charge (with co-operation of the manufacturer) any defects in material and workmanship which later use shows existed at the time the machine was delivered, but be sure before saying, "Yes, we will replace that no charge," that the customer has not misused the machine.

6. Furnish at any time without charge, advice about the care or use of the machine. The manufacturer usually supplies an instruction book, which should be given to the customers, at the same time requesting them to keep this in a handy place for future reference, for if you can get the operator to read instructions properly, it will save the dealer many calls.

Trouble shooting on washing machines is full of experiences not found in many similar lines of work. Good mechanics can overhaul a washer in the shop, but a man to go out on calls to the homes must be a mechanic, a diplomat, a detective, a salesman and a very good natured human being, and especially a gentleman, as he usually must talk to women who are more or less in a fighting mood when the washing machine refuses to operate in the middle of the washing.

A woman's complaint that her washer "will not pull" may call for tightening the belt or putting on a new belt or loosening a burnt bearing due to a lack of oil. To find the cause of the trouble whether it is in the machine itself or due to some mistake of the operator is as interesting and as baffling some times as a good detective story.

Follow Sale With Occasional Call

There is another type of owner who has

turned against washing machines generally and his own in particular, because of some trouble he has had. Often it is a small matter to fix. A few minutes' work and a little talk will turn a knocker into a booster.

Whether there are any calls for service men or not, it is a good plan to call on washer owners once in a while. It is a good way to build good will.

A service department pays if it keeps the customers satisfied and so furnishes the ground work for more sales.

The one thing that a merchant should impress upon his customers at all times is the necessity of oiling the machine at regular intervals. A washing machine in most cases represents an outlay of money earned by hard labor, and when its life is prolonged, just that much more profit and pleasure are derived from its operation.

Lack of oil has caused many new machines to be thrown into the junkheap. Oil is certainly cheaper than a new washing machine. And the time used in applying it is certainly well spent. Whenever there is metal in motion against other metal apply oil or grease, as this forms a film over both metals on which the friction comes. The more we can reduce friction the longer will be the life of the washer itself, as well as the source of its power, be it motor or gas engine, and the less its cost of operation. Oil holes frequently become stopped with grease and dirt that has hardened, and then the bearings get no oil. When this is the case, the holes should be carefully cleaned. Nothing will give your customers better returns for the time spent than a carefully oiled machine.

HIS TUNEFUL MESSAGE

Included among the passengers on board a ship crossing the Atlantic recently was a man who stuttered. One day he went up to the captain of the ship to speak to him.

"S-s-s-s" stuttered the man.

"Oh I can't be bothered," said the captain, angrily; "go to somebody else."

The man tried to speak to everybody on board the ship, but none could wait to hear what he had to say. At last he came to the captain again.

"Look here," said the captain, "I can tell you what to do when you want to say anything; you should sing it."

Then suddenly, in a tragic voice, the man commenced to sing:

"Should auld acquaintance be forgot and never brought to mind?

The blooming cook's fell overboard and is twenty miles behind."

The Arizona Hardware & Supply Co., Phoenix, Arizona, has exemplified its progress by buying a 5-ton semi-trailer for its deliveries.

Quartermaster Corps General Supplies Sale

**BIDS CLOSE
MARCH 17th**

Inspection— Goods are sold "as is" at storage point. Samples of practically all articles are displayed at Zone Supply Offices and at the Surplus Property Division, Munitions Building, Washington, D. C.

Negotiations— No special form is required for the submission of a bid. Bids may be made by letter or telegram.

All bids must be submitted by 3:00 P. M. (Eastern time) March 17th. They should be addressed to the Zone Supply Officer at the nearest address: Army Supply Base, Boston, Mass.; 461 8th Avenue, New York City; 21st Street and Oregon Avenue, Philadelphia, Pa.; Coca Cola Building, Baltimore, Md.; Transportation Building, Atlanta, Ga.; Army Building, 15th and Dodge Streets, Omaha, Neb.; Ft. Mason, San Francisco, Cal.; 17th and F Streets, N. W., Washington, D. C.; Newport News, Va.; Jeffersonville, Ind.; 1819 West 39th Street, Chicago, Ill.; 2nd and Arsenal Streets, St. Louis, Mo.; Audobon Building, New Orleans, La.; San Antonio, Tex.; New Cumberland, Pa.; Columbus, Ohio; or to Surplus Property Division, Munitions Building, Washington, D. C.

Bids must be for goods at point of storage, as set forth in the specifications of materials advertised.

Each lot offered is identified by a number. Bids should include the lot number or numbers on which the bid is made. Bids may be made for any quantity greater than that stipulated as minimum bid which will be considered, or for the total quantity in any lot. In bidding stipulate price bid per article (for example, one hairbrush) instead of for total quantity desired. No bid stipulating "all or none" of any lot will be considered, unless that bid is the highest. No deposit is required with the submission of a bid.

Notification— Successful bidders will be notified by mail on or before March 22d, and advised of the quantity awarded to each. A deposit of 10% of the amount due under each award must be made immediately upon receipt of notification.

Delivery— The articles offered are for spot delivery. Purchasers will be permitted to leave stocks which they may acquire in government storage for a period of 30 days after receipt of notification. Goods, so held, will be held subject to purchasers' risk.

Important— The War Department reserves the right to reject any part or all of any bid or bids. Inquiries relative to sales conditions or stocks offered should be addressed to the nearest Zone Supply Office.

Action— Take advantage of the extremely unusual opportunities presented in this advertisement. Give careful consideration to each item listed in this and succeeding sales. Every item listed is available for immediate delivery.

IRONTON BUNSEN HEATERS

How the principle of the Bunsen Burner has been applied to heating stoves for household purposes is described in the new catalog of the Ironton Stove & Mfg. Co., Ironton, Ohio. Laboratory tests of Ironton Bunsen Burner Heaters shows that the Ironton saves on natural gas 32% and on artificial gas 65 5-23. These tests were held at both Ohio State University and Columbia University.

The Stoves are made in fireplace designs as well as those to be used in the center of the room or without a fireplace. One of the features of the Ironton line is the bathroom heater No. 29. A postal card to the company will bring a copy of this handsome catalog to any dealer from the manufacturer.

W. L. Shearer recently purchased the merchandising interests of the Yakima Produce & Trading Co. at Toppenish, Wash., and henceforth the hardware store, implement department and feed mill will be known as the W. L. Shearer Co., Inc.

One of the most valuable community trade associations in the western half of the U. S. is the Coos and Curry Hardware Dealers' Association, in the Coos Bay district of western Oregon. This association meets frequently, and social acquaintance and business understanding are on equal basis at the meetings. The president is W. N. Ekblad and the secretary E. P. Lewis.

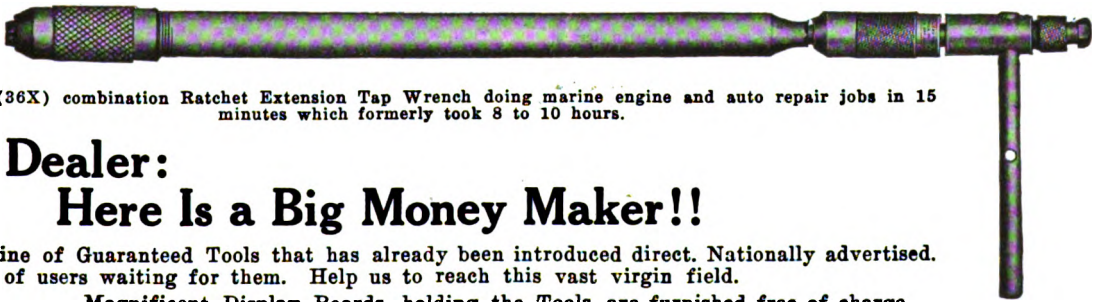

It was the misfortune of the Canby Hardware Co., at Oregon City, to be robbed twice within one week at a loss of \$300 worth of stock.

When Ruggles & Allen opened their new hardware store at 1556 Ocean avenue, San Francisco, last month they sent attractive notices to all their prospective customers in the neighborhood. They are located in one of the new resident districts at Westwood Park, and carry a full line of hardware, plumbing and electrical specialties and household utensils. They will also do repairing and jobbing along these lines.

HIGH SPEED PUMPING OUTFITS

Herewith is presented Figure 1695, the new Hi-Speed water supply pump and pumping outfit, produced by the Goulds Mfg. Co., at Seneca Falls, New York.

It has been designed especially for use in connection with water supply systems for cottages, camps, farm homes and buildings, dairies, creameries, small

town homes, hotels, mills and factories, and should be easily salable by the implement and rural hardware dealer. This pump is absolutely quiet and smooth running as all gears have been eliminated. It operates at a speed of 500 revolutions per minute and is self-oiling.

WORLD'S SKATING CHAMPION WITH WINCHESTER

"Bobby McLean, of Chicago, Ill., the world's champion ice skater, and holder of practically all of the world's ice skating records from 50 yards to 5 miles, is now a member of the forces of the Winchester Repeating Arms Co., of New Haven, Conn., being attached in the capacity of consulting engineer in the manufacture of ice skates.

With the Winchester Repeating Arms Company in control of the Barney & Berry plant in Springfield, Mass., and wishing to continue the Barney & Berry skate as best in the world, and to improve upon it if such a thing is possible, the services of McLean were secured, for McLean knows skates, knows how they should be constructed, and knows about as much about skates and skating conditions as anyone living. Consequently, he will be a very valuable acquisition to the Winchester Repeating Arms Company in the development of the ice skate industry.

McLean, too, will be a valuable acquisition to the Winchester forces as a skater, for his ability should bring forth a flow of comment that should make for more and better skaters. McLean has departed for Christiania, Norway, where he skated Oscar Mathieson, of that city, a series of six races for the world's ice skating championship, there on February 7 and 8. Following these races, McLean will tour Europe, giving exhibitions of speed and fancy skating at Davos, St. Moritz, and other skating centers.

HOW THE YOST WORKS

The two accompanying illustrations show in general and detail the working principle of the Yost Gearless Motor Washer, which has enjoyed a very healthy growth and constantly increasing sales during the past five years.

Although the product has been on the market for a much longer period than that, it has only been under the present management since 1914.

With a simple, economical and long lasting labor machine of this character to sell, the Yost Gearless Washer Co. make a particular point of supporting its dealers with sales helps, cuts for newspaper advertising and suggestions for advertising and sales promotion.

The pictures herewith only illustrate the graphic way that the company presents its proposition to the prospective buyer.

The company will be pleased to furnish detailed information and the outline of its sales policy to any dealer through its main offices at Springfield, Ohio.

At the recent convention at Spokane H. S. Fender & Co., of Prescott, Wash., report that their business has increased from 60 to 70 per cent over that of last year. They will soon be in their new building, where they will have opportunity to give added attention to their line of hardware, implements and accessories.

NEW ELECTRIC REPRESENTATIVE

With the organization of the Bower Sales Co., the first of this year, George G. Bower, whose likeness we present herewith, becomes a member of the hardware and electrical distributing trade of the northwest. Mr. Bower has for some time been sales manager of the Northwest Electrical Co., and his valuable experience should stand him in good stead now that he is in business for himself.

Offices have been opened at 506 Spalding Building, Portland, Oregon, and Mr. Bower will be glad to consider additions to his already goodly group of electrical specialty and staple lines of eastern manufacturers.

MERCHANDISING BULLETINS OF ALUMINUM GOODS MFG. CO.

Commencing with the New Year the Aluminum Goods Mfg. Co., through its sales department, is distributing a series of monthly merchandising bulletins to all the retail dealers who handle the Aluminum Mirro line. They believe if they can show the dealer and his sales clerks the fundamental principles of successful buying and selling then they have laid the foundation of a good trade and a profitable account.

Every bulletin will treat of one definite phase of modern merchandising. The complete series will embody those principles which are the secret of success in retailing. Merchants not receiving these bulletins will do well to inquire of their jobber or the company direct at their general offices at Manitowoc, Wisconsin.

NEW ROSE GREASE BUCKET

The Frank Rose Mfg. Co., formerly the J. H. Haney & Co., of Hasting, Neb., have placed on the market a style of grease bucket which will be known as the Rose Fil-a-Gun grease bucket. The grease bucket has a new feature not found on any other device of its kind on the market.

Attached to the side of the bucket on a special carrier is a rose topper nozzle grease gun which can be placed on a special hose nozzle and filled completely full with a single stroke of the bucket pump. The gun is used to lubricate universal joints, cam gear cases, etc., that cannot be lubricated with the hose. The bucket also pumps direct to the gear set and rear axle assemble through the hose.

CORRESPONDENCE A LA MASON

The spirit of the following correspondence is surely commendable in these days of stress, shortage and kick. Letters like this surely turn curt into courtesy.

BAKER IRON WORKS

Los Angeles, Calif.

Lufkin Rule Co., Saginaw, Mich.

Gentlemen: I bought a rule the other day; it came from the town of Saginaw and has the very darndest way of measuring you ever saw, from the figure one to the twenty-four from the north end of the stick, it loses an eighth of an inch or more, and that I calls an "unruly" trick. From the middle figure to the point where the number one reposes, there's a gain of a steenth at seventeen. The contraption seems to be out of joint, and a checking up discloses there really isn't an inch between the figure seven and the figure six. I fear I'll get in an awful fix and meet with dire catastrophe in measuring my anatomy. So, Mr. Lufkin, if you'd save me going to an early grave, when you get this rule by parcel post induce it to give up the ghost and send me one that measures right, and I'll keep my troubles out of sight. I sign myself most duly yours,

Very, very truly,
A. H. CLIMIE.

THE REPLY

LUFKIN RULE COMPANY

A. H. Climie, Los Angeles, Calif.

Dear Sir: Your kind letter of November 26th is now at hand; and the rule, if you remember, you discovered is our brand. We have made a close inspection, of the rule you said you bought; and it shows an imperfection our inspectors should have caught. You, no doubt, are right insaying: "This is an unruly trick"; for your pardon we are praying; it is but a guessing stick. How it ever passed inspection, we ourselves can never tell; after days of deep reflection, we admit that it beats H—. Trust you've not been discommoded through your purchase of this stick; hope your ire has not been goaded, glad you came to us to kick. We are sending, Mr. Climie, to your address one that's right—one that fairly shouts: "Just try me!"

Kind regards, will close,

GOOD NIGHT.

"If any one kin—Luf-kin."

WESTERN ARCHITECTS' GUIDE

Containing the names of 1,000 architects in the states of California, Oregon, Washington, Idaho, Utah, Nevada and Arizona corrected up to the first of the year, the new edition of the Architects' Guide is ready for distribution by its publisher, E. D. McDonald, 410 Hobart building, San Francisco, California. The price of the complete list is \$5.00. With the payment of \$1.50 extra the names of architects in Montana, New Mexico and Colorado can also be included.

DUNHAM, CARRIGAN & HAYDEN DAIRY AND ICE CREAM SUPPLY CATALOG

As a supplement to the new journal catalog of Dunham, Carrigan & Hayden Co., a supplement containing only dairy, creamery and ice cream equipment and supplies, catalog No. 67 has just been issued by the company. It is completely indexed, printed on fine book paper and numbered consecutively from page 2500 through over 100 pages. Merchants in the dairy or ice cream supply business can not get along without this catalog, as it is complete in every respect, and a tribute to the issuing organization.

SUMMER SEASONABLE GOODS

Hot off the press, with a four-color cover, and aimed to bring spring fever into the heart of the customer and feverish activity into the sales register of the merchant, is the new 70-page catalog of the Gold Medal Camp Furniture Mfg. Co., of Racine, Wis. Camp furniture and automobile tourist supplies are one of those lines that make the hardware store and the hardware window especially attractive to the passerby. Suggesting the outdoors and the little comforts that make life worth while, they are particularly salable and attractive.

In the new catalog are pictured all of the items in the Gold Medal line, including camp furniture, equipment of all sorts, porch and folding furniture and automobile camping equipment. In addition to the catalog the company is particularly distinctive in its extensive system of dealers' helps and guides for dealer advertising. All of this literature will be gladly supplied from the offices of the company, together with electrotypes for use in local advertising by the merchant.

KONSTRUCTO TOYS FOR BOYS

Among the ingenious toys designed for the modern child are Konstructo Building Blocks, manufactured by the Konstructo Co., with offices in the Wilcox Building, Portland, Oregon, and at 103 West 14th St., New York City.

Konstructo Blocks are aimed to strengthen and develop the constructive ability that should be encouraged in all children, and they are also very fascinating to older people. They are interlocking and are sold in three different assortments, yet so manufactured that all can be used with each other, so that an increase in the purchase only increases the possibilities of construction with the blocks.

With each set of blocks is enclosed a booklet, showing the large number of models which may be built with the same. A wideawake hardware dealer will find a pleasant and profitable trade can be built up among the women and children buyers as well as men, in handling such toys as the Konstructo line.

J. T. Elson, manager and vice president of the Grays Harbor Hardware Co., Aberdeen, Washington, has left to assume other duties for the Marshall Wells Hardware interests, and he will be succeeded as manager by Carl N. Stockwell, who has been for twenty-five years associated with the Marshall Wells Hardware Co.

The firm of Francis & Johnson at Auburn, California, has been disincorporated and henceforth will be operated under the name of the owner, Joseph Johnson. Mr. Johnson's upright characteristics and thorough knowledge of the trade have built up a fine business for him.

SHINGLE ROOFING—SEVENTEEN YEARS' PAINT SERVICE

In the January issue of GRAPHITE, published by the Joseph Dixon Crucible Company, Jersey City, N. Y., there appears an illustration showing shingles which were painted with Dixon's Silica-Graphite Paint seventeen years ago. It was taken from the roof of an ice house on the Maine Coast. It is interesting to note that the shingles on this building are still in excellent condition, owing to the remarkable protective qualities of Dixon's Silica-Graphite Paint.

On account of the high cost of labor and material, there is a great advantage and much saving in cost to be obtained through applying a coat of Dixon's Silica-Graphite Paint to roofs which might otherwise have to be resingled within a few years or less. Owners of buildings in sections where the laws make it necessary to use slate or other coatings, will particularly appreciate the importance of this information. As one enthusiastic customer has stated, the saving secured through the use of Dixon's Silica-Graphite Paint made the paint and labor cost him absolutely nothing.

GARAGE BOOKLET REPRINTED

So great has been the demand for "8 Garages and their Stanley Garage Hardware," a little publication of the Stanley Works, that it has been found necessary to reprint the material. This time it is contained in a neat pamphlet, 3½x6 inches, and it is the intention of the Stanley Works to send this miniature booklet to anyone interested in Stanley Garage Hardware, or as a suggestion when building a new garage.

It describes in detail the construction of eight garages, giving specifications, as well as exterior views, and a list of the hardware necessary. Elsewhere in our publication this hardware is described more in detail. Hardware merchants who handle accessory lines should find this Stanley booklet very interesting counter literature.

The Eckmann & Locke Hardware Co. has just opened for business on a promising scale at Yakima, Washington.

The Wood Hardware Co., of which Hub Wood is manager, recently acquired the interest of the Rimers Hardware Co., at Cottonwood, Idaho.

Erbie Hayes has purchased the Vale Hardware store at Vale, Oregon, and henceforth the business will be known as the Hayes Hardware store.

The Olympia Hardware Co., Olympia Washington, has become incorporated with the Olympia Tire Service Co. and the two will be conducted in conjunction.

A. J. Wheeler & Sons who recently went into business for themselves at Corning, California, report a splendid business during the past year. They have met with merited success in their new enterprise.

The Roswell Hardware Co., Roswell, New Mexico, has placed itself among the leading firms of that region by declaring a profit sharing scheme for employees who have been with the company for over twelve months.

Arising immediately from the fire that recently gutted the property of the Mazzini Hardware Co., at Alameda, Cal., these progressive merchants lost no time putting a new front on their building and putting themselves in better shape than they were before the blaze.

Changes in ownership of both hardware stores at Davenport, Washington, are announced. Frank E. Denson retired from the Denson & Cassels company, his son Vernon F. Denson, taking over the interest and becoming a partner with his brother, Fred W. Denson, and Russell P. Cassels. Fred F. Morse purchased the interest of B. F. Latham in the Latham & Turner hardware store and will associate with A. H. Turner in the business.

The Jameson Hardware Co., McMinnville, Oregon, recently filed articles of incorporation with a capital stock of \$40,000. Besides A. L. Jameson, the worthy president of the Oregon Retail Hardware Association, the incorporators are M. M. Jameson and George F. Jameson. The business will be continued as formerly.

Plumbing and Heating

A SPLENDID BUSINESS ASSET

"Like that rare stone of alchemist of old,
Good humor turns the dross of life to gold."

One of the pleasantest assets in the world is good nature—the ability to smile, to laugh heartily, and to see the fun in everyday happenings.

There are those people who get their fun at other folks expense and always make the people about them uncomfortable at the same time. This isn't real fun or real wit or humor. It is merely the expression of a disagreeable disposition. True fun is that which bubbles up like a fountain from within and is so sparkling and happy, that it makes others happy as well.

The man whose face has become so set in certain lines and grooves that it will not smile readily, is to be pitied, for a smile will win many a favor, will smooth out many a rough place, and will tide over many an emergency. It is more natural for some people to be merry than for others, but anyone who wills can cultivate the art of good-nature.

Starting the Day Right

Have you ever noticed how the first half-hour of the business morning, colors the entire day. Start out grouchy, and everybody gets edgeways; start out cheery and in an encouraging frame of mind, and others will fairly outdo themselves to please you.

One of the surest ways of being able to start out in a good-natured way in the morning, is to plan one's work carefully the evening before; to sleep enough and have plenty of fresh air; and to arise in the morning in time to get properly groomed for the day and to eat a leisurely breakfast.

If there is any one thing in the world which heads off good humor, it is confusion, hurry, and an inner sense of having to leap every minute for fear expenses will get ahead of you. That's why I say, make your plans in time, so that you can really make every move count. When you do that, it is easy to be good-natured.

The dross of life is made up of the grubby, disagreeable things which must be attended to, but

"Out of the mud and slime of things,
Something, something always sings."

However, we must have ears attuned to

catch the singing and be ready to smile with joy at those things which are pleasant and unexpectedly cheerful. Good humor does a lot to make the commonplace events of life interesting and bearable, and helps keep us enthusiastic over our tasks. Without good humor and without the disposition to see the pleasant side of things, life becomes dreary and business a mere tread-mill existence.

At one time a certain newspaper man who has since become very widely known, was sent by Horace Greeley to find out how Henry Ward Beecher was able to deliver so many lectures, preach so many sermons, and do so much work generally, without breaking down. Beecher's answer was that he had no particular specific for keeping well, but one thing he did make a point of, and that was to have a good, hearty laugh every single day.

It doesn't make any difference who we are, where we live, or what we are engaged in, a happy, spontaneous laugh is a tonic we cannot afford to neglect. It will make us more liveable for the people at home, and will encourage co-operation among our business associates.

The man who never laughs aloud is in a dangerous condition, for those who have made a study of the subject, tell us that there is a place with all insane patients where they cease to laugh naturally. Some of us may not be quite as near normal as we think we are.

There is a deal of truth in the suggestion that good humor will turn the lead and zinc and copper of life into gold and silver and platinum. It is the spirit alchemy of a life worth while.

It is surprising how quickly the details of important contracts and documents slip from mind. For this reason, it is good business occasionally to spend a few spare hours going over these, for your own self-information. The property of many a man who dies is distributed by his direction, according to his will, quite differently than would be the case if he had revised it recently. While you are keeping up to date for the public, keep up to date in matters relating to your own welfare and that of your family.

The Posy on the Stem

(By Harry Gale Nye)

ABOUT the sickest looking thing in the garden is a plant that never blooms.

It may be as green as an apprentice on his first day in the shop, and as luxurious as a set of Russian whiskers, but if it hasn't any posies on it, it looks very much like it didn't belong. It is just taking up water from the sprinkler and sunshine from the sky, without giving for value received anything in return.

I know a lot of men (no, not a lot, but some) who are just like that. They have never discovered that the posy on the stem is the most important part of the plant. They may have as much long green money as the bloomless plant has long green leaves, but, unless they are unloading a little perfume on the passerby, they are just a weed, and the garden of life isn't any better for their living than the garden out in my back yard is for the stem without a posy.

There are men who are models of conduct, or they think they are. They never did a wrong to anybody in their lives, so far as anybody knows—or a kindness. It may be some boss, who never criticizes—or praises. It may be a salesman, who never does anything but attend strictly to business—and never feels the slightest interest in anything but a prospect, and then only in what he may want to buy. It may be a workman in the shop, who is industrious enough, and turns out work enough, but never gives another man a nudge or a help or a smile.

Do Something—Even if It's Not Exactly Right

These fellows think they are all right. But I'd rather have a man do a wrong now and then than never have him do a right.

I'd rather have a salesman feel a little interest in me and my troubles and joys, even though he does waste a little of my time.

I'd rather see a boss jump on a man unjustly now and then, if I know that some time he would likewise give him a little praise when he didn't deserve it. Certainly I would like to see him give the man a little praise when he was deserving of it.

And even the man out in the shop—I'd rather have him crack a smile once in a while, even if he did it on the company's time, than to be so darned industrious that he never noticed that the man next to him not only would welcome the smile but maybe needed it.

I have long been convinced that there is such a thing as being too blamed good. I have never been accused of it—but I know this: If I have been foolish or cranky or even unfair at times, I have tried to be a little something different the rest of the time.

In other words, while divinity is all right, it doesn't hurt to be a little human around a shop, whether you work at a desk or a bench. The man who watches himself all the while to see that he never does anything that his conscience or his wife doesn't approve never has any time left to observe any of his fellows. They'd like him better if he were cranky or foolish once in a while and human the rest of the time.

This is a practical paper, and this may not sound like very practical advice. But I have been thinking about it a lot lately, and I think maybe it is. In the army they have a thing they call "morale," and I guess it is just about as important in a shop as in a camp. It means to keep men's spirits up—and the good work comes through the shop that has men who smile.

You may think that a smile slows up production, but I believe it works the other way. A horse doesn't pull any too well when the tugs are too short; and a man doesn't work any too well when he is tied too close to his job. He is likely to get the idea that a shop is made up of a lot of individual men working at individual machines at individual tasks. That isn't my idea of a shop at all. The baseball team that gets that idea plays rotten ball. The army that gets that idea is licked the minute it goes up against the other kind. The shop that works that way isn't much more of a success than the baseball team or the army of individuals.

Now this is all old stuff. But it is just as new as it is old. The stem without a posy may be proud of the fact that it is the biggest thing in the garden, but a little pansy making purple faces at you, or a sprig of sweet clover by the roadside, is doing a lot more good and not taking up near as much room.

Think it over and, if you are a stem without a posy, for heaven's sake bloom a little!

A life without friendship is a desert waste. Naturally, we seek those who are congenial, and who command our admiration and respect.

"Be noble!

And the nobleness that lies

In other men, sleeping, but never dead,
Will rise in majesty to meet thine own."

GIVE YOUR CUSTOMER ALL HE IS ENTITLED TO, BUT DON'T OVERLOOK YOURSELF

(By J. H. Jennings)

We hear so often the question, "What is the matter with the plumbing and heating business?" I want to tell you there is nothing the matter with it; in fact, it is the best business in the world, and the trouble is with ourselves, who are engaged in the business. We are not masters of it.

Let us look the facts in the face and get to our place in the sun.

Another year is drawing to a close and manufacturers and jobbers of plumbing materials and the journeymen are making money. Why do not we who have to do the engineering, estimating, execution and financing of the work make a little money for ourselves? We seem to prefer to work for everyone's interest but our own, and have been doing so for several years and will continue to do so in the future, if we do not get down to business and act squarely with ourselves, eliminate jealousy and selfishness from our systems and quit trying to pull the other fellow down, or trying to prevent him from making a legitimate profit on his work, but try and build ourselves up so that people in the community will say of us as we pass: "There goes a successful man."

When we make up and submit an estimate on a piece of plumbing or heating work and know that it is honestly made with the full amount of material and labor, that it takes to do it, according to the plans and specifications with at least an overhead of 20 per cent and a profit of at least 10 per cent added, why do we not be square with ourselves and stick to the price submitted, when the owner or his agent says he has us beat or that the price is too high, and he cannot go ahead with the building unless we cut our price and come within the amount he has allowed for the work?

Why should we give him our material that is so hard to get, or furnish him labor for nothing to build himself a home and a garage for his family, while we need the material and labor so badly to make a living for ourselves and family, or why should we cut the price to keep one of our competitors from getting it or from making any money out of it because he happens to be a "price cutter?" We should go ahead after some other job, as there is plenty of work for everyone, and stick to the rule of making a profit on every piece of work that we do.

Can you recall to mind any one who ever showed any appreciation for your having done his work without profit? I cannot, and why should you expect a man to show appreciation for that which he does not know he is getting.

As the conditions are at the present time with labor so uncertain, it is our duty to adapt ourselves to conditions as they now are.

If a man in the plumbing and heating business is not making money now, it certainly is his own fault. A journeyman plumber or steam fitter turns out about \$12,000 worth of work per year at the present high prices of material and labor, and a shop with only five men will at a minimum price of 20 per cent for overhead and 10 per cent profit pay an overhead of \$12,000 per year and a \$6,000 profit by doing \$60,000 worth of business, while five years ago, when material and labor was just half of what it now is, he would be doing only \$30,000 worth of business and would be losing money.

You say that labor is scarce and there is not enough journeymen to do the work. I say that statement is not a true one as far as this city is concerned. There are more men here working at the trade than there ever were.

The papers state that there is more building going on here than there ever was, and this is true according to the building permits, in dollars and cents, but the fact is, building is really below normal on account of the prices and scarcity of material, and that it costs about 100 per cent more to build now than it did before the war. In fact, we are just on the verge of a building boom that will last for three or four years, and there is no reason why we should not get down on a business basis and prepare ourselves for it.

There is a great opportunity immediately confronting us, and it behooves us, as master plumbers and steam fitters in the true sense, to admit the light of truth that will awaken us to the duties and obligations that we owe to ourselves and our families.

Let us render unto Caesar the things that are Caesar's, unto God the things that are God's, and unto ourselves a fair compensation for a service well rendered. Let us be square with ourselves!

S. F. Anderson, who for the past two years has successfully operated the Glendale Plumbing Co., at Phoenix, Ariz., has sold that business and has established the Standard Plumbing Co., at Phoenix, Ariz.

L. H. Beaudrie, formerly a well known plumber of the Grays Harbor district, but who for the past year has been in the fruitgrowing business, has decided to open up an extensive plumbing and farm machinery business at Hood River, Oregon. He will install a complete line of implements required by ranchers.

Weed & Dickinson have leased the west half of the lower floor of the Masonic Temple Building at Calexico, California, in order to give them increased facilities for the rapid growth of their business. J. C. Dickinson and W. H. Parcells will have charge of the plumbing and tinning, and will look after the outside work. Weed & Dickinson expect to keep things humming in the progressive southern city.

WINDOW CARDS AS ADVERTISEMENTS

"If advertising fails to stimulate your business, advertise it for sale," runs an old advertising slogan. The man in business may be ever so capable, his integrity may be unquestioned, his shop equipment may be up-to-date in every particular, but what will it avail him if these facts never reach the masses?

Every successful plumber and steam fitter realizes that going after business is an absolute necessity. A comparatively small number are going after business in the right way. Yet many men still need to take the first step—to do something that will get them started on the road to more profitable business.

Advertise! Whether it be in the trade journals, through the news columns, on billboards, in show windows, or by word of mouth, if you advertise intelligently you may sit back and confidently expect large dividends on your investment.

Of these methods none is less expensive than the show window, and it may not be the least effective.

It is a fact that the big department stores in Philadelphia, New York, Boston, Chicago and other large centers pay men almost fabulous sums to "dress" windows. These stores know the tremendous value of their window space; they know that people passing by can be made to come in and buy.

Fortunately an increasingly large number of men in our trades are beginning to recognize the importance of their windows as business-making helps. For this reason the trade will welcome the novel selling helps offered by one of the leading manufacturers in this field.

This manufacturer offers a series of twelve window cards, 6½x10 inches, printed on heavy cardboard, beautifully hand lettered, and in attractive colors.

Three of the cards were as follows:

"Why freeze this winter when at small cost we can put your house heating system right and make it save coal, too?"

"Leaky faucets and toilets waste dollars. We can put them in shape in a jiffy at small cost. Get our prices—now!"

"You'll be surprised to know how little it costs to modernize your bathroom, laundry, or kitchen. Estimates free."

These striking signs are worth while and should be prominently placed in the windows. They will be read by the passing crowds. And they will act as reminders to bring the homeowners into the shop to get the necessary work done.

We are sure the trade will appreciate this sort of help because of its dollars and cents resultfulness.

The aggressive plumber and steamfitter who is alive to the need for all sorts of publicity helps, will get the entire set of cards. They can be had for a small order by writing to the "X" Laboratories, 25 West Forty-fifth street, New York City.

ENCOURAGING BOLSHEVISM

Everything that falsely encourages unrest also encourages bolshevism.

Misunderstanding of American industrial organization, and of its benefits to mankind, leads to unrest, dissatisfaction and radicalism.

For example, the Federal Trade Commission tells the public that the large packers had an agreed price for lard substitute (made of cotton seed oil).

It reproduces letters taken from the files of one of the packers, showing that such agreed price existed.

But it failed to mention that the agreed price was determined at the request of and in co-operation with the Food Administration!

The Department of Justice made public these same letters, with no explanation.

NATURE HELPS

"Why is it, Sam, that one never hears of a darkey committing suicide?" inquired the Northerner.

"Well, you see, it's disaway, boss: When a white pusson has any trouble he sets down an' gits to studyin' 'bout it an' worryin'. Then firs' thing you know he's done killed hisse'f. But when a negro sets down to think 'bout his troubles, why he jes' nacherly goes to sleep!

WESTERN BRASS CO. MAKES NEW HANDLE

Elsewhere in this issue will be found the announcement of the Western Brass Co., of the new brass door handle which they are just adding to their line. It is not included in their regular catalog, but a more definite description of the door handle as pictured in their announcement will be forthcoming on request.

These enterprising western manufacturers are constantly adding to their line of plumbers' marble hardware, brass railing and hardware specialties. They will be glad to send their catalog on request from their factory at 217 Tehama street, San Francisco.

O. R. Cretser will open a plumbing and tinning business at Ukiah, California. Cretser is a plumber of long experience, and expects to do a good business the coming year.

James A. Cessna, for thirty years a plumber at Redding, California, passed away recently. Cessna was born in an eastern state sixty years ago, and has lived for many years in Redding.

W. H. Gollaher, of Mesa, Ariz., will open a larger and better plumbing and fixture house at that place. The new establishment will be known as the Reliable Plumbing & Electric Co. In his new establishment he will handle a complete line of plumbing and electrical appliances and fixtures. He plans to do a large business this coming year.

Durkin's Biggest Order

(By Henry James Buxton)

DO YOU remember your biggest order? Of course—everybody does, for the biggest order always marks the turning point in every career of business. It galvanizes a sluggish business into super-activity, injects new life into any enterprise big and little. You can no more forget your biggest order than you can forget the Christmasses of your childhood.

Maybe things looked pretty blue before the arrival of that whopper of an order. You were getting behind in your bills, you were having trouble with your help and you seemed to be only about two laps ahead of the sheriff with your wind giving out. Then, perhaps, out of a blue sky drops the biggest order—a gim-slicker of an order with profit bulging out all over it. Remember that thrill? Can you forget how quickly your business horizon cleared of gloom?

Didn't your step feel lighter and didn't the bend automatically drop out of your shoulders? Oh boy! wasn't it a fine feeling, and can you ever forget how your wife smiled when you told her all about it? No, indeed, these are things we can never forget. They are part of the little heaven we get on earth. If there is one thing we don't want to forget in this life of ours it is the biggest order—the order upon which we lay the foundation of even greater achievements.

Did you ever notice there is something hypnotic about the biggest order—ever perceive how it draws other big fellows into your store. Birds of a feather flock together, you know, and it's pretty certain if you land one big order others will drift in as naturally as the small ones used to in the olden days when you were climbing up the ladder of achievement.

Always a Story About It

There is always a story around the biggest order—a story in which all of the romance and zest of modern business are ever present. Usually the biggest order represents the fruits of struggle—a struggle maybe which you have kept up for months and even for years. You have kept hammering at this one place for a long time, but your knocks were unheeded until suddenly the door opened wide and fame and fortune was yours.

Generally the story of the biggest order deals with a man who refused to be licked—refused to succumb under the ruthless poundings of discouragement. The struggles of some men who have won the biggest order would compare well with the adventures of the superb Bunyan in *Pilgrim's Progress*. These men have fought against contending forces until their

bones almost cracked and their flesh writhed in fatigue. But they kept up the glorious fight until they won.

How D. F. Durkin, Jr., 1613 Pine street, won his biggest order after a struggle extending over nearly thirty years is a story replete with all of the exhilarating romance of modern plumbing. And don't forget either there is romance in modern plumbing. Mr. Durkin tells his story with the pep which is characteristic of his whole business career, and here it is:

"Thirty years ago," said Mr. Durkin, "I started in the plumbing game. Before I had been in it two minutes I decided that it was the greatest game on earth, and I haven't changed my mind since. I worked hard at it for ten years and then I went into business for myself. And before I had been in business for myself six months I discovered that there was one thing essential to big plumbing success and that was personality—personality with capital letters.

Develops Personality

"So right away I set out to develop my personality. I read widely and cultivated people of intelligence, for early it was apparent to me that an effective personality cannot exist on ignorance. I knew that if you hoped to make an impression on a prospective customer you must show him that you know something. You must convince him that you can see over the edges of your particular rut.

"Many plumbers do not realize it, but it is a fact that the plumbing game is one of the biggest games of the world—a game which requires a wide range of knowledge. Realizing this I began the study of chemistry, physics and modern sanitation. I found that this knowledge helped me wonderfully in going after big jobs. In the pursuit of these big jobs I was brought in contact with men of refinement and intelligence. When they saw that I knew all phases of the science of plumbing they were delighted, and I won their confidence easily.

"Early in the game I decided that I would specialize on institutional work, such as schools, hospitals, asylums and orphanages. Naturally this sort of work requires a much bigger scope of plumbing knowledge than housing operations and the like.

Studying Likes and Dislikes

"I hired a competent man to take charge of the office and devoted all of my time to personal interviews with the heads of institutions. I studied the likes and dislikes of these men. I

"The Largest Stove Repair House in the Northwest"

learned to lay my propositions before them in pleasant and convincing language.

"Other plumbers who had not the vision to see my plan and its possibilities laughed at my efforts. They declared that I was wasting my time running about when I should be in the office looking after my business.

"They were astonished and chagrined, I think, when success crowned my efforts. I began to land the good jobs, and because I did these jobs well and gave a guarantee for every one of them I got more of them. All I had to do was to refer to my latest job which was sufficient recommendation for my work.

"Well I kept fighting up the ladder until one day down dropped my biggest job. This job entailed the installation of plumbing into the new Misericordia Hospital—a \$50,000 contract. I did the job well, as any experienced plumber can tell by visiting the hospital and looking things over. I am always glad to have my work inspected, for I give nothing but the very best. In fact, I do my work just a little better than promised. A brimming measure, you know, is the best advertisement that any plumber can have.

"It was a genuine pleasure to land that hospital job, and right there my wide knowledge of sanitation stood me in good stead. Through this knowledge I was able to give the Misericordia Hospital the most up-to-date plumbing of any similar institution in the city. It is plumbing designed to promote the utmost sanitation and helps to insure the health of every patient and attendant in the building.

"The hospital job has given me the stimulus to keep after big things. In fact, I have acquired an obsession to do the biggest things in the world in plumbing. I am constantly thinking of improved methods, and often I get an idea which proves a bonanza to my business.

"I am now completing a \$10,000 plumbing job in St. Vincent's Home, Seventieth and Woodland avenue. The plumbing I am putting in there is going to make that home a much better place to live in. In fact, it will give the home a superiority over other institutions of its kind.

"Many plumbers do not realize it, but America has taken the lead new in all matters of modern plumbing. The war brought American plumbing into France, and because of this the French will be a healthier and more vigorous people. A good plumber is a trail blazer for all humanity."

D. L. Kibler has purchased the plumbing business of C. J. Munns at Malden, Washington, and reports an excellent business.

Klemmer Bros., have been awarded the plumbing work on ten bungalows which have been started at Willows, California, in the Pittsburg addition.

GREATEST PLEASURE IN GIVING TO OTHERS

While the whole country is disturbed and agitated with strikes, walk-outs, and lock-outs; while the country rocks with the problem of an open or closed shop, and while discussions pro and con on every subject under the sun occupy the attention of the people, it is like a golden ray of sunshine to read of the great gathering of the National Cash Register Company in Dayton, Ohio, where something like 25,000 contented workers gathered in a great picnic of welcome to celebrate the home-coming of the president, John Patterson.

They do not seem to have labor troubles in Dayton, and perhaps it is because Mr. Patterson has never been so happy as when he was giving of his time or profits or interest for the betterment of the workers who have made his success possible.

The picnic was held in a great and splendid park. The park itself was given to the people of Dayton by Mr. Patterson, and consists of 294 acres of hills and valleys. It has many beautiful and substantial buildings and is equipped with play apparatus and other improvements. For the occasion of this picnic, seventeen extra buildings and tent structures were erected and nothing was spared to make the occasion a happy and joyous one.

Back of all this is more giving that we could possibly tell about—giving which has made the people take pride in their homes, and has made them work like heroes to reach perfection in their tasks whatever they were, for giving of the right kind is bound to inspire others to do their best, to be permanent, and to be proud of the organization of which they are a part.

Many a fine young man who went "over the top" and gave his own life in the great struggle felt a higher and holier joy in giving than he ever had in receiving. Many a worker who has toiled for years has felt unbounded satisfaction in being able to make happiness for others possible—libraries, hospitals, homes and foundations of different kinds.

Each Can Give Day by Day

But why wait until we are able to do some great and fine thing? Why not give day by day as we go through life, warming our own hearts with the joy of service and making larger service possible all the time? That is the way Mr. Patterson has done. He did not wait until he could give a park, and it is because he gave of himself and what he had from time to time, that he has been able to do for others in such a large and splendid way.

Perhaps you can only give a smile of pleasant encouragement—give it! The kindly word of appreciation which you can honestly offer, may mean more to some of your associates than money. The hand grasp with which you accompany a Christmas, a New Year, or a birthday greeting, may make it a precious thing—for "the gift without the giver is bare."

Just now there is a great organization which suddenly finds itself fallen upon evil days, and the heads of it recognize that the present condition is due, unfortunately, to the close, stingy policy followed during the war. They didn't see the mistake they were making then, but they are reaping the results now, and the results are not pleasant ones.

Perhaps your type of giving may be some fine and splendid service which the public needs. Success has come many a time from the giving of noble service and the getting of a reasonable rate of pay for the service.

The doctor who takes care of your child and saves its life by his skill, could not go on saving other children and other lives, were it not for the fair remuneration which enables him to go on and on.

The individual, whether he is in business or not, who takes all he can get and gives as little as he

can offer in return, is a parasite, pure and simple, and who wants to be a parasite—that's what a cootie is!

There are those who feel that the giving of courtesy is unnecessary. They look upon it as superficial and yet courtesy is often the golden coin with which we can settle an honest claim for adjustment.

The man who goes about the world saying to the public constantly, "Give, oh give," or whose petition to his Maker constantly cries, "Give, give, give," is a beggar, and beggars do not ride on horseback nowadays, although they used to.

Give of yourself; give of the inspiration of your great-hearted sympathy and intelligence; give of your means where giving will help; give of your personality, and let it be pleasant; give of your service and public-spiritedness and let it be the best of which you are capable—always remembering that the greatest receiving moments of your life are small and dull beside the moments when you have given to others.

Ross Brunner, son of George A. Brunner, of Tulare, will soon open a plumbing shop in Pixley, California, in a new building which is being erected.

Milton Merton has purchased the Westside Plumbing Shop from W. H. Rich and is planning to immediately re-enter the plumbing business at Yakima, Wash.

P. W. Boyle, proprietor of the Boyle Sheet Metal Works at Blackfoot, Idaho, has announced that the firm will close its doors the first of the year. Mr. Boyle will return to Shullsburg, Wis., from whence he originally came.

Instead of grouching because the other fellow has a bigger business than you, study his methods, publicity, and his service—and then go to it and beat him in the same game.

Patented
"B" Kerosene
Furnace

WHERE QUALITY REIGNS SUPREME "ALWAYS RELIABLE" Furnaces and Torches

Since 1876 we have been manufacturing this line. Today we are one of the largest producers of furnaces and torches in the western hemisphere.

Why do mechanics demand the "Always Reliable?" Because this make is made from the best materials obtainable, and by skilled workmen, therefore, guaranteed to give you perfect satisfaction; and because this make is considered the most practical on the market, due to the patented features with which it is fitted.

A trial will also convince you as it has thousands of other users.

OTTO BERNZ CO., Newark, N. J., U. S. A.

The maiden of six was sitting in a crowded bus between her mother and a very portly uncle. "Now, dear, don't you think you had better sit on uncle's knee, and let that lady sit down?" whispered mother. "I can't, mother. Uncle breathes too far down, and would push me off," replied little Lucy.

TOLD ON HIS BACK STOOP

Patient—How often shall I wear these shoulder braces, Doctor? Shall I wear them all the time?

Doctor—Wear them whenever you feel inclined.

J. J. Kruse is doing a large business in sheet metal and plumbing at Casa Grande, California.

No. 1 Fire Pot, List Price, Each \$27.20
Ask for Discount

The No. 1 Fire Pot is the Last Word in Fire Pots

The No. 1 embodies all the good points of other makes and is conceded to be the BEST GENERAL UTILITY FIRE POT ever made. The tank is made of seamless drawn steel, reinforced, with bottom and all fittings welded in, making it extra strong and durable. The top section is removable and the base can be used as an open Fire or Torch. No. 1 is a fuel saver and will soon save the user its cost in the saving of fuel alone. Jobbers supply at factory price. Send for catalog—it's free.

AN ORDER THAT TURNED OUT DIFFERENT FROM WHAT THE SIGNER THOUGHT

(Copyright by Elton J. Buckley)

With an interesting little case as a text, I will preach a little sermon on one phase of careless contract-making, which may leave you bound to a much greater extent than you wanted or expected to be:

I am inclosing herewith a few pieces of literature relative to some butter dishes we ordered from a certain concern of New York. About a month or so ago the salesman from this concern called on us. We were pretty well stock at the time with the old-fashioned trays to use in selling lard; these cost us \$2.40 per 11,000, and along with these we have to use a piece of waxed paper and a piece of wrapping paper. With this man's article all we had to do was to put the lard or butter or whatever we were selling into the thing and close the lid. The man figured the thing out for us and told us that he didn't know what the exact cost of a 1,000 lot of these would be, but that it would be about \$7 or \$8, depending on the number there were to the pound, as they sold at 27 cents per pound. For delivery purposes this article is far better than the old-style tray, so I decided to try a 1,000 at the price he estimated. You will notice on the copy of the order that the part telling about how many pounds per 1,000 is blurred beyond distinction, either purposely or accidentally.

These people came along the other day with the bill inclosed for this 1,000 dishes or boxes at \$24.30. This is over my estimated cost and far above what we feel like paying under the circumstances. We bought these to use on lard, and to show you the figures we will take this instance: In normal times we handle lard on a gross margin of profit averaging 4 cents per pound. These dishes, including freight, handling, etc., would cost us about \$25 per 1,000, or 2½ cents apiece. This leaves us about a cent and a half to do business on, with no allowance for shrinkage considered. In other words, we would have to sell about 600 pounds of lard in order to pay for this 1,000 dishes and not make a cent on the 600 pounds. No sane man would do this, and I know I never said we would.

Immediately upon receiving the bill from these people we wrote them telling them that we ordered them with the express understanding that they would not cost us over \$7 or \$8 per 1,000 and that we would pay this amount and no more. Also told them that the railroad company had been advised that we were refusing the shipment when it arrived. In the meantime they came and the railroad called up and we verified our first refusal.

Now, what I want to know is this: Have these people got us or haven't they? Never had a suit in my memory at the store and never want to, but we certainly do not feel like being the goat in this case. However the salesman figured around to get the \$8 figure I don't know, but he did, and that was the understanding I had when I signed the order. Was pretty busy at the time, and after listening to him for some time I signed it and went on with my work, really didn't pay any attention to what the original copy had on it, nor the copy he left us, either, for that matter.

Inclosed with this was the manufacturer's answer to the correspondent's letter of protest. The substance of it is that the signed order "shows exactly the number of boxes purchased, their respective approximate weight per 1,000

and the price of 27 cents per pound, and consequently we fail to understand how you could have in any way been misled by any alleged misrepresentations claimed by you to have been made by our salesman."

The question therefore is:

When a buyer, after some preliminary conversation with a salesman in which certain representations are made, signs an order for certain merchandise, what is his remedy when he finds that the order calls for more goods than he thought, from the salesman's conversation, he was buying?

The buyer in such a situation may have a complete remedy, and he may have none. The law expects every man to read a printed or written document before he signs it, and it holds him responsible for everything in it which he could have seen had he looked. If the order signed is full and complete, if it contains all the terms of the agreement, the buyer is bound if he signs it, even though it is wholly inconsistent with the understanding with the salesman.

That is my answer to this correspondent: if the original order, which he signed, shows all the terms, including the number of boxes to the pound, he is bound. The copy of the order which he sends me does not clearly show this provision, which is the crux of the case. If the original also does not clearly show it, then he may be within the exception in these cases which would allow the verbal understanding with the salesman to be brought into the case. That exception is that where any of the terms of an order aren't clear, or where they are blurred and cannot certainly be read, verbal testimony can be given to show what they mean and to complete the agreement. That would let in the evidence that the salesman said 1,000 would cost \$7 or \$8, and this correspondent would have a chance.

If the original order is clear, however, and shows all the items and details of the agreement beyond all question, he might just as well pay the whole bill now, for the court will not allow him to say that the salesman said so and so, nor will it allow him to argue that he ought to be relieved because he signed the order without reading it.

The moral is to invariably take time to read, and if necessary, to have explained, every paper that you sign, even though that paper is merely a routine order which you think could not possibly contain any tricks. This correspondent makes the honest confession that he "was pretty busy at the time and after listening to him for some time I signed it and went on with my work; really didn't pay any attention to what the original copy had on it, nor the copy he left, for that matter." It is an inexcusable mistake to ever get as busy as that; this agreement might just as well have been ten times as large for all he knew.

Retail Selling Prices

The following are the present market retail selling prices of merchants in some of the large cities. At the request of many merchants in smaller towns and cities who do not have the opportunity of checking up their prices often, we revise these prices each month. In communities removed from the larger cities, transportation charges would of course be added. As the overhead expense of a retail business in any part of the United States ranges from 20% to 25%, many merchants use these prices to save time in figuring their own. We will be glad to receive suggestions and corrections as to any prices quoted herein and any items not mentioned.

Converse Tires

THE Motorist's dream of the perfect non-skid tire is most nearly realized in the Converse Cord. This rugged, buttressed tread, adapted to the suction principle, prevents skidding. Its broad bearing surface insures speed and power.

Converse Cords are effective long after others are worn smooth—because there's more rubber where the wear comes.

Converse quality is your **insurance** that will build and maintain a permanent, profitable business.

THE DEXTER DOUBLE TUB cuts washing time in two. It washes—rinses—wrings by power—all at the same time. It eliminates all hard labor in the home laundry, making all kinds of soiled garments beautifully clean without boiling or hand rubbing and does this in less than half the time usually required. DEXTER DOUBLE TUB will quickly double your washing machine sales—and your washing machine profits. It stays sold, and brings new customers on account of its remarkable time and labor saving qualities.

The DEXTER line also includes attractive single tub models for use with gasoline engine. Write today for catalog and exclusive agency proposition.

THE DEXTER COMPANY, Fairfield, Iowa

100 % WASHING MACHINE EFFICIENCY

**“EITHER YOU ARE SATISFIED—
OR WE ARE NOT”**

TALK No. 7

The satisfactory service consistently rendered by Whitlock ALL-Manila Rope is the result of the quality of fibre we use and of our manufacturing standards.

Complaints or criticisms of Whitlock quality are almost unknown to us. In rare instances a coil of imperfect manufacture may be shipped, and in such cases we ask the privilege of making good, and satisfying our customer.

In using the phrase, quoted above, on our guarantee tags, we mean exactly what we say.

The greater Ropeconomy obtained by using cordage that has superior strength and life, and has these qualities uniformly, is evident.

We welcome the most thorough tests and comparisons of Whitlock ALL-Manila Rope, wherever obtained, and sincerely desire to know of any case of dissatisfaction.

WHITLOCK CORDAGE COMPANY

Simplex Ranges

Make Electric Cooking Popular

EXTENSIVE use of electric power for cooking will come only as fast as the public is educated to the efficiency of the electric range.

You can boost the profits of your business by pushing the sale of a good electric range, and, while you're at the job, you may just as well set out to push the most efficient range, the new Simplex No. 27.

The Simplex Range is easy to sell and gives more satisfaction to the customer and to the dealer than any other range. The customer is pleased with its convenience and its great reliability, and the

dealer is satisfied because the Simplex Range requires very little service from him.

The heating units of the No. 27 range are of the same type used on the Simplex heavy duty ranges, which stand up so well under severe tests of restaurant service.

It is easy to remove any unit. The fuse cabinet is so placed that all connections coming from the oven units may be reached conveniently.

The Simplex Electric Range brings profit alike to the dealer and central station and economy to the user.

*No. 27
Simplex Range*

COES

Names That Have Value

Have you ever heard of an autoist **hiding** the name Cadillac on his motor car?

Or a pianist **covering** the name Steinway on his piano?

Or a man **Concealing** the name Waltham on his watch?

Or a mechanic **scratching** the name COES from his wrench?

On the contrary the owner of an automobile, piano, watch or screw wrench which bears these names is proud of both their **construction and performance**—proud to point to a maker's name that has always been associated with **highest quality**.

It pays to sell wrenches that bear a name that both **maker and user** are proud of—names that have never **deceived** because the goods have never **disappointed**.

All leading Jobbers handle the Coes.

"Cost a trifle more,
but return the cost in **SERVICE**."

Get a Grip on Wrench Sales

Sell a good wrench—or better not make the sale. Good wrenches like Pexto, out-grip, out-last and in the end out-sell cheap ones. Stores with a real grip on wrench sales are found to recommend only the best.

Pexto Wrenches are good wrenches with a hundred years' experience built into them. They have the metal, the temper, the design and features to maintain their leadership for another century.

And Pexto Wrenches are known to the general public. National advertising in the Saturday Evening Post has planted the name Pexto indelibly in the minds of hundreds of thousands of people. They can be sold *more* than wrenches—they are ready for the complete line of Pexto Tools—and you can sell them.

THE PECK, STOW & WILCOX COMPANY

Mfrs. Mechanics' Hand Tools, Tinsmiths' and Sheet Metal Workers' Tools and Machines, Builders' and General Hardware.

100% American for 100 Years. Founded in 1819

PEXTO
Solid Handle Wrench

This solid handle Pexto Wrench is made of three strong, simplified parts with heavy wooden riveted handles. The head, bar and handle frame are forged in one piece from high quality steel, next is the sliding jaw, and third the screw.

PEXTO
Solid Steel Wrench

Like its solid handle partner this wrench is made of three simple parts—the head, bar and handle are all forged in one piece from high quality steel. This Pexto Wrench is built for heavy duty.

PEXTO
Pipe Wrench

This Pexto Wrench carries out the highest ideals of Pipe Wrench design. The hardened jaws of steel grip like a vise, yet they are easily tightened or released. When you get a pipe wrench be sure it's Pexto-made.

HINGES opened the way to PROGRESS

THE exact date when hinges were first used is not known. Hinges outdate history.

Even if we attempt times to make doors possible, they have come down through the ages, serving man in every generation. Since the time of their first hinge conditions have greatly changed. New countries have been discovered and developed. There have been many inventions. The world has grown.

And hinges played their part in opening the way to progress.

Fifty years ago hinges and butts assumed a new identity. Stamped with the name McKinney they set a new standard for the

hinge industry. For half a century McKinney Hinges and Butts have effectively and more heavily served. They do today's work without sagging or squeaking.

Whether it be a massive portal or small box lid, there is a McKinney Hinge or Butt of proper beauty and design to fit. They fill every need.

In our plans for building or repairs consider the little hinge or butt. A careful selection at first will later be rewarded by years of untroubled usefulness.

So that the name McKinney is stamped on the hinges or butts you buy.

The name McKinney is important!

McKINNEY

Hinges and Butts

McKINNEY MANUFACTURING CO., Pittsburgh. Western Office, State-Lake Bldg., Chicago. Export Representation.

This is the third advertisement in the big McKinney campaign. It appears in the March 6th issue of The Saturday Evening Post and the March 20th issue of The Literary Digest. In these two powerful publications it will carry the story of McKinney Hinges and Butts to more than 3,000,000 readers and prospective customers. At the same time other full page advertisements are appearing in Architectural and Builders' Magazines. All these advertisements are planned to impress the name "McKinney" upon the minds of hinge users. You can make these advertisements work for you. Talk McKinney!

That name McKinney—

This huge advertising campaign is giving the name McKinney greater prestige. More and more this mark of a standard product, by which other hinges and butts are judged, is becoming better known. You, as a dealer, should profit by this advertising.

McKinney Products have set a standard in the past. McKinney advertising is impressing the worth of this standard on your customers. Make your store McKinney Headquarters in your locality. Be sure your customers know you handle the McKinney line!

Lawson Line Moves Quickly From Dealers' Shelves

THE OLD WAY

THE LAWSON WAY

Lawson Universal Pivot Spring Hinges can be used on either single or double acting doors opening either in or out and swing from either the right or left side.

Lawson Surface Floor Spring Hinges are stronger than most. They swing the door better and present a finished appearance which looks well on any application.
